-
- Risk Return relationship: In CAPM, the expected return on an asset varies directly with the systematic risk (β) and the risk premium of the market portfolio.
 - The risk premium of a market portfolio, also referred to as reward, depends on the level of risk free return and return on the market portfolio.
 - These three aspects are needed to apply CAPM.

- The image shows a classroom with a projector screen at the front. The screen displays a list of bullet points about the Capital Asset Pricing Model (CAPM). To the right of the screen is a computer tower with a monitor and keyboard. The room is filled with rows of wooden desks and chairs.
- CAPM is an equilibrium model of the trade off between expected portfolio return and unavoidable risk (systematic risk).
 - This explains how asset prices are formed in the market place.
 - It is an extension of the portfolio theory of Markowitz by William Sharpe, John Lintner and Jan Mossin.
