Minutes of the meeting of the Board of Studies in Physics held on 12th March 2012 at 10:00 am in Conference Room -II, School of Physical Sciences, Banasthali Vidyapith

PRESENT

1.	Prof. N. S. Saxena	:	External Member
2.	Dr. Vimal Vyas	:	Member
3.	Dr. Vibhav Saraswat	:	Member
4.	Dr. Sarita Kumari	:	Member
5.	Dr. Shobhna Dixit	:	Member
6.	Dr. Parvez Ahmad Alvi	:	Member
7.	Dr. Amarjeet Singh	:	Member
8.	Dr. Saral Kumar Gupta	:	Member
9.	Dr. Saurabh Dalela	:	Convener

Prof. K. Venugopalan, Department of Physics, Mohan Lal Sukhadia University, Udaipur, Dr. Anchal Srivastava, Lucknow University, Lucknow and Dr. Ghanshyam Sharma, internal member could not attend the meeting

1. The board confirmed the minutes of its last meeting of the Board of Studies held on October 3, 2010.
2. The board has recommended the syllabi for Ph. D. entrance examination as per UGC guidelines. The syllabi for Ph.D. entrance examination is enclosed as **Annexure-I**. The board has also suggested to prepare a bridge course for the students pursuing their Ph.D., who registered in year 2009.
3. Regarding preparation of question bank containing 1000 questions for BRET, the board has suggested that the 30 % component for research aptitude test should be same for all science disciplines. Regarding the frequency of the BRET the board is of the opinion that the test should be conducted only twice a year. The question Bank will be submitted along with the soft copy to the Vice-Chancellor.

4. The board has verified the names of the degrees related to the department and found that the names of degrees are as per the list of degrees specified by the UGC.

5. The board has recommended the course structure and syllabi of the M.Tech. (Nanotechnology) programme and is enclosed as **Annexure-II**.

6. The board has also verified the course codes of various programmes relevant to the department and have following opinions:

   In M.Sc. (Physics) I Semester, the courses Digital Electronics and Computer Programming are also running in the M.Sc. (Electronics) I semester programme as common papers, hence the subjects must bear the same codes.

   In M.Sc. (Physics) III Semester, the course on Solid State Electronic devices is also introduced at the level of M.Sc. (Electronics) in I semester and hence it should also have the same code at both places.

7. The board has found the concept of handout is necessary for proper monitoring the courses objectives and recommended its implementation strongly.

8. As the department is not running any certificate/diploma programmes, the agenda is not applicable.

9. Continuous assessment is a mean to observe the performance, progress and overall evaluation of the students periodically. Hence to strengthen the Continuous Assessment (CA) policy the board have recommended that it should be taken as per the format given below:

   40% of Class Test I + 40% of Class Test II + 20% of Tutorial Sheets/Assignments

   In this format the major components Class Test I/II can be of various types like objective type questions, subjective questions, debate or some oral presentations as per the discretion of the faculty member assigned to teach the course.

10. The board has examined the list of text/reference books for all the under-graduate programmes and found all the syllabi are relevant and from the text/reference books recommended to the particular subjects.

11. The board has examined the existing panel of examiners for each examination upto and inclusive of all Master's Degree Examinations keeping in view the Bye-law 15.03.02 of the Vidyapith and updated the same and submitted to the secrecy department.

12. **I.** The board recommended the study curricula and scheme of examination of B.Sc. (Physics) pass course. The board suggested a few modifications in the IV semester syllabi. The modified syllabus suggested by the board is enclosed as ***Annexure III***.

II. The board recommended the study curricula and scheme of examination of M.Sc. (Physics) course. The board suggested a few modifications in the some of the syllabi that are enclosed as **Annexure IV**.

13. The board reviewed the reports received from the examiners of different examinations and found that the reports were satisfactory and the performance of the students in most of the papers is up to the mark.

14. The board considered the report submitted by faculty members on the suitability of question papers of last year/semester for this year and noted that the question papers were satisfactory**.**

15. The board examined the journal list as per reputation and impact factor. The distribution of the journals is made in the category A (A1, A2), B, and C as per the need of BLISS, maintaining the decisions in last year's Board of Studies meeting.

However, regarding the allotment of journals in category A, B and C, the Board recommended that the Journals in category A1 must have impact factor greater than 1.0, for category A2, the impact factor must be in between 0.5 to 1.0, for Category B the journals must have the impact factor less than 0.5 and all the refereed journals without impact factor must be considered in category C.

The meeting ended with a vote of thanks to the chair.

Annexure-II

1. INTRODUCTION

Nanoscience and Nanotechnology are fast growing areas of Science and Technology which span the entire spectrum of science and technology including next generation electronics, engineering materials, advanced materials and coatings, devices, computers, medicine, textiles, sports equipment, polymers, biology, agriculture, food science, etc. Nanotechnology is considered the next generation Industrial Revolution without which the industrial sector cannot sustain. Indian state and private sectors are highly enthusiastic on developing nanotechnological research and development activities.

The M. Tech. programme will cover a broad range of disciplines to enable the trained graduates to make an objective judgment of the scientific importance and technological potential of developments in micro- and nanotechnologies and to perform a range of activities related to Nanoscience and Nanotechnology. The study programme will thus prepare the student to take the challenge of meeting not only national needs in diverse areas of nanoscience and nanotechnology but also to continue toward advanced studies anywhere in the world.

2. PROGRAMME ELIGIBILITY

Applicants seeking admission to this programme must have one of the following degrees/qualifications from a recognized university.

(a) a M. Sc. Special Degree in Physics or Chemistry, or

(b) a B.Tech. General Degree in Electronics, Electrical Engineering, Biotechnology and Chemical Engineering.

(c) any other equivalent qualification acceptable to the Banasthali University.

Only a limited number of candidates will be admitted to the programme in a given year. The selection will be based on merit/ Entrance Exam. Candidates should be proficient in English as English will be the medium of instruction for the programme.

Programme Summary

M. Tech. I Semester

Course code	Course	Contact Hours/week	Continuous Assessment	Annual Assessment	Total
THEORY					
MN 1.1	Introduction to Material Science	4	20	40	60
MN 1.2	Fundamentals of Nano-science and Nano-technology	4	20	40	60
MN 1.3	Surface, interfaces and thin films	4	20	40	60
MN 1.4	Advanced synthesis processes and devices.	4	20	40	60
MN 1.5	Mathematical Modeling and simulation	4	20	40	60
PRACTICAL					
PR 1.1	Nano fabrication and Characterization- I	8	20	40	60
PR 1.2	Simulation Laboratory -I	8	20	40	60
Total		**36**	**140**	**280**	**420**

M. Tech. II Semester

Course code	Course	Contact Hours/week	Continuous Assessment	Annual Assessment	Total
THEORY					
MN 2.1	Nano-electronics	4	20	40	60
MN 2.2	Nano-Photonics and Optoelectronics	4	20	20	60
MN 2.3	Quantum Computations and information processing	4	20	40	60
MN 2.4	Advanced Characterization techniques	4	20	40	60
ELECTIVE					
MNEL 2.5a	MEMS and NEMS technology	4	20	40	60
MNEL 2.5b	Organic and Polymer Technology				
MNEL 2.5c	Nano-engineering of Biological systems				
PRACTICAL					
PR 2.2	Nano fabrication and Characterization-II	8	20	40	60
PR 2.3	Simulation Laboratory-II	8	20	40	60
Total		**36**	**140**	**280**	**420**

M. Tech. III Semester

Course Code	Course	Contact Hours/week	Continuous Assessment	Annual Assessment	Total
READING ELECTIVE I					
MNEL 3.1a	Business enterprises in Nano-technology	-	-	-	60
MNEL 3.1b	Nanotechnology and Society				
MNEL 3.1c	Nanotechnology in health care and environment				
MNEL 3.1d	Development of nanotechnology: A Global Aspect				
READING ELECTIVE II					
MNEL 3.2a	Tissue Engineering				60
MNEL 3.2b	Nano-catalysis				
MNEL 3.2c	RF and MMIC design				
Mid Term presentation of **MAJOR PROJECT*** progress (Carried out till the end of Semester IV)		-	160	-	160
Total		**-**	**160**	**-**	**280**

M. Tech. IV Semester

Course	Contact Hours/week	Continuous Assessment	Annual Assessment	Total
Major Project*	**16**	**-**	**320**	**320**
Total	**16**	**-**	**320**	**320**

***A dissertation Project is carried out during the final year in the advanced laboratories anywhere in the country as well as in the department.**

Grand total = 1440

MN 1.1 INTRODUCTION TO MATERIAL SCIENCE

Section A

Need of material science and Engineering: Atomic bonding in solids, unit cells, primitive cell, crystal systems, Miller indices, crystallographic directions & planes, packing fraction, linear density, planer and theoretical densities of crystal structure, close-packed crystal structures, single crystal, polycrystals, amorphous structure, Introduction to XRD for the determination of crystal structure; Crystal imperfections: point defects, linear defects, surface defects, bulk and volume defects; Polymers: Introduction, classification, polymer structure, copolymers, tacticity, geometric isomerism, molecular weight, molecular weight distribution, molecular weight averages, polydispersity index; Ceramics: Introduction to ceramic structure and applications of ceramics.

Section B

Introduction to Phase diagrams: Phase rule, Unary phase diagram, binary phase diagram (Al2O3, PbSn, Ag-Pt), Hume-Routhery rules for solid solutions, the lever rule. The tie line rule, Diffusion: Diffusion mechanism, Fick's law of diffusion, steady state and non-steady state, applications based on Fick's second law, kirendall effect; Phase Transformations: Nucleation, homogeneous, heterogeneous growth, Transformation kinetics, Time-temperature-transformation (TTT) curves, applications of nucleations & growth, glass transition.

Section C

Mechanical behavior: Elastic, anelastic, viscoelastic behavior of materials, modulus as a parameter in design. Plastic deformation, plastic deformation by slip, shear strength, motion of dislocation: effect of stress, temperature, grain size, solute atoms, precipitate particles, multiplication of dislocations, basic concepts of creep and fracture. Biomaterials: Protein Enzymes DNA, RNA. Liquid Crystals and Quasi Crystals, Disposal of waste materials.

2. M. F. Ashby and D.R. H. Jones, "Engineering materials1 and 2", BH publication, 2002.

MN- 1.2 FUNDAMENTALS OF NANO-SCIENCE AND NANO-TECHNOLOGY

Total Contact Hours: 65

SECTION-A

Nanostructures: Definition of nanoscience and nanotechnology, classification of the nano materials, zero dimensional nanostructures, one dimensional nanostructures-nanowires, nanorods and nanotubes, two dimensional nanostructures-graphene, Thinfilms, three dimensional nanostructures.

Quantum Confinement: Quantum confinement of electrons in semiconductor nanostructures, Quantum dots(QDs), Quantum wires (QWRs), Quantum wells (QWs). Density of states in QDs, QWRs, QWs.

SECTION-B

Synthesis of Nanomaterials: Synthesis of nano-structured materials, sol-gel processing, microwave synthesis, self-assembly, Langmuir-Blodgett (LB) method, electrochemical deposition, chemical vapor deposition, Sputter deposition, pulsed laser deposition, magnetron sputtering, molecular beam epitaxy, lithography.

Properties of Nanomaterials. Shape and size dependant properties- electrical, linear and nonlinear optical properties, magnetic, thermal and mechanical properties of nanomaterials, melting point and lattice constants, surface plasma resonance.

SECTION-C

Applications: Nanotechnology in computing-Quantum computation, molecular computation, Supercomputing systems, quantum well and quantum dot lasers.

Nanotechnology in health and life sciences, nanomaterials in tissue engineering, protein detection, nanostructured materials in biomedical implants, nanoporous membranes, biomedical applications of nanoparticles.

Text/Reference books:

2. Guozhong Cao, Nanostructures and Nanomaterials–Synthesis, Properties and Applications, Imperial College Press, London, 2004.
3. Michael Kohler and Wolfgang Fritzsche, Nanotechnology-an introduction to Nanostructuring techniques, Wiley-VCH, 2004.
4. Emil Rodune, Nanoscopic materials - size dependant phenomena, Royal society of Chemistry publishing, 2006.

MN1.3 Surfaces and Interfaces and thin films

Total Contact Hours: 65

SECTION A

Vaccume techniques: Introduction, Important areas of application basic definations of vacuum technology, vacuum pumps: rotary Vane pumps, sorption pumps, Diffusion pumps, Turbo molecular pumps, Ion Pumps, cryogenic pumps, Vacuum gauges: McLeod gauge, Diaphragm gauge, Pirani guage, Thermo couple gauge, Ionization gauges, Vacuum valves: Diaphragm, Gate, Butterfly, Baffle, Needle, Air inlet, Flanges, Gaskets, and O rings, Bellows, Layout of the complete vacuum systems.

SECTION B

Growth and Analysis: Stanski-Krastnow growth method, Analysis of surfaces: structure analysis using AFM, STM, LEED, chemical analysis using XPS, AES

Introduction to crystal lattice: Relaxation and reconstruction at surfaces, adsorption, physisorption and chemisorption, stepped and kinked surfaces.

SECTION C

Liquid surfaces and morphology: Roughness and its statistical description, height probability distribution, Gaussian probability distribution, correlation functions, transformation to reciprocal surface, Fractals, fractal dimension, self-similarity, self-affinity, self-affine surfaces, Capillary waves on liquid surfaces. Principles of characterization techniques: Grazing incidence x-ray scattering techniques and surface sensitivity, x-ray and neutron reflectivity.

Text/Reference books:

1. Introduction to surface science, by M. Prutton, Cambridge University Press
2. X-ray and neutron reflectivity, Principles and applications: Jean Daillant and Alan Gibaud, springer track
3. Vacuum Physics and Techniques by T.A. Delcher, Chapman & Hall.

MN 1.4 Advanced synthesis Techniques and devices

Total Contact Hours: 65

Section A

Crystal Synthesis: Epitaxy and Epitaxial growth techniques. Thin film growth in Ultra High Vacuum environments, Molecular Beam Epitaxy; basic physical processes . Variants: Gas source MBE, Phase locked Epitaxy, Atomic Layer Epitaxy. Fundamentals of MBE growth processes. Lattice mismatched heteroepitaxy: Post-growth characterization techniques: Double Crystal X-Ray diffraction, Photoluminescence, Hall Effect, C-V measurements. Dielectric depositions: Sputtering, low Pressure Chemical Vapour Deposition.

Section B

E-beam lithography: basic principles, e-beam resists; exposure considerations, multilevel techniques. X-ray and ion-beam lithography: basic principles. Imprint lithography: Soft - elastomeric materials ; techniques - near-field phase shift lithography, replica moulding, micromoulding in capillaries, microtransfer moulding, solvent-assisted microcontact moulding, microcontact printing; Rigid -nanocontact moulding; nanoimprint lithography; UV-assisted - step-and-flash imprint lithography; soft UV nanoimprint lithography; templates, masters and moulds. Scanning probe lithography: scanning probe tools ; techniques - local oxidation nanolithography, local chemical nanolithography, dip-pen nanolithography, hemomechanical patterning and replacement lithography (nanoploughing, nanoshaving and nanografting).

Section C

High Speed Electronic devices (FET, HEMT, pHEMT) and novel concepts. Transferred electronic devices: Gunn devices. Advanced concepts in HBTs. The SiGe and GaN systems: basic band structure and salient features. Circuits: pHEMT and HBT equivalent circuits, frequency dispersion, short channel effects. GaAs and InP Integrated Circuits. Monolithic Microwave Integrated circuits (MMIC). High speed Analogue design. Differential Amplifiers, cascade techniques, direct coupled amplifiers. High speed Operational Amplifiers and Analogue to Digital converters (ADC). Low noise amplifiers. Electronic systems: electronic sources. Frequency multipliers. Heterojunction Barrier varactor (HBV).

Text/Reference books:

1. Fabrication of fine pitch gratings by holography, electron beam lithography and nano-imprint lithography (Proceedings Paper) Author(s): Darren Goodchild; Alexei Bogdanov; Simon Wingar; Bill Benyon; Nak Kim; Frank Shepherd.
2. Microfabrication and Nanomanufacturing- Mark James Jackson.
3. A Three Beam Approach to TEM Preparation Using In-situ Low Voltage Argon Ion Final Milling in a FIBSEM Instrument E L Principe, P Gnauck and P

Hoffrogge, Microscopy and Microanalysis (2005), 11: 830- 831 Cambridge University Press.

4. Processing & properties of structural nanomaterials - Leon L. Shaw (editor)

MN-1.5. Mathematical Modeling and simulation

Total Contact Hours: 65

SECTION-A

Fundamental principles of numerical methods: Scientific Modeling, Numerical Algorithms, Programs and Software, Approximations in Mathematical model building, Numerical integration, Differentiation, Variation finite element methods, Raleigh's method, Ritz method.

Mathematical modeling: physical simulation, process control, transport phenomena, concept of physical domain and computational domain, Finite element method and Finite difference method.

SECTION-B

Ab-Initio methods: Linear Combination of atomic orbtals method, Density function theory, Hartree and Hartree Fock methods, mean field approximation, statistical methods for many body system, spin-polarized relativistic Korringa-Kohn-Rostoker Green's function, Augmented Plane Wave, Full Potential-APW, Projector Augmented Plane wave, linear muffin tin orbitals and **k.p** methods.

SECTION-C

Simulation: Basic concepts of simulation, data manipulation, data exchange of the structure, properties and processing of materials, Three dimensional model for capillary nanobridges, Molecular dynamics simulation.

Monte Carlo methods: Basics of the Monte Carlo method, Algorithms for Monte Carlo simulation, Applications to systems of classical particles, variation Monte Carlo method, diffusion Monte Carlo method, Quantum Monte Carlo method.

3. Ohno, K, Esfarjani. K. and Y. Kawazoe, Introduction to Computational Materials Science from ab-initio to Monte Carlo Methods, Springer-Verlag, 1999.

MN-2.1. Nanoelectronics and Devices

Total Contact Hours: 65

Section A

Quantum tunneling, ballistic electron transport, 1D transport and Büttiker-Landauer formula, quantum point contact/quantized conductance, electron collimation effect, solid state electron optics negative bend resistance and anomalous Hall effect, breakdown of Ohm's law, quantum Hall effect and 1D edge states, quantum interference and Aharanov–Bohm effect, effect of high surface/bulk ratio on thermal dynamics, noise in nanostructures.

Section B

Principles of VLSI chip design, digital logic and memory devices. CMOS scaling, challenges and limits: short channel effects, static power, device variability, interconnect; ITRS; Bulk CMOS improvements: strained Si, high-K dielectrics, metal gates, SOI; Novel device architectures: fully depleted ultra-thin body SOI, multiple -gate devices: planar double-gate, FinFET, tri-gate FET, Memory devices. Phase change RAM, ferroelectric RAM, magnetic RAM, molecular memory.

Section C

Limits of conventional microelectronics, Resonant tunneling devices, hot-electron transistors, Coulomb -blockade effect and single-electron transistor/memory, quantized electron current carried by surface acoustic wave, quantized conductance in multi-wall nanotubes, branched electron flow paths and quantum switch, different types of ballistic rectifiers, nonlinear electronic nano-material, planar nano-diode and transistor, Y-switches, molecular electronics and nanotube transistors, organic semiconductor devices.

6. Conventional MOS transistors Y. Tsividis, "The MOS Transistor". Oxford University Press, 2nd edition 1999.

MN 2.2 Nano-photonics and Optoelectronics

Total Contact Hours: 65

Section A

Optically active semiconductor materials and optical probing. III-V semiconductor Quantum Wells and Quantum Dots: comparison with the case of particle in well and particle in a box. Structural studies of real nanostructures through X-Rays and Electron Microscopy. Spectroscopic studies of QD ensembles: photoluminescence, measurements in Magnetic field, absorption measurements, ultra-fast spectroscopy. Single QD studies through micro-PL: Spin states. Manipulation of nuclear spin states. Optical cavites, Photonic gap materials. 1D microcavities, 2D/3D photonic structures. Optical manipulation of qubits. Quantum cryptography and optical approaches to quantum information processing.

Section B

Two level system, rate equations, Population inversion, Lasers. LED's. Heterojunction lasers, Guided Wave Optics, basic geometry, operating characteristics, losses, gain, gain band, modification of characteristic by lowered dimensionality, QW and QD Laser performance. Surface emitters, Microcavity lasers, Materials issues. Alternative cavity designs; micro-disk lasers, photonic band gap cavities. Unipolar devices: QCL devices for mid/near infrared. Principles of operation, Basic operating characteristics. Use of photonic structures to lower losses. Single Photon sources. Attenuated LED's, Single dot devices, true single photon sources, I and II order correlation functions, Hanbury Brown-Twiss experiment.

Section C.

Photodiodes , Avalanche Photo Diodes (APD), photon counting, materials requirements for APD's, limitations, after pulsing, quantum efficiency . Quantum dots as absorbers, standard current generation. QWIPs Quantum well infrared photodetectors (QWIPs). Operation principles, design and materials choices. Fabrication of planar arrays, spectral response, two colour detection. Quantum dot infrared photodetectors (QDIPs). Extending QWIPs into shorter and longer wavelengths.

5. Optical Metamaterials Fundamentals and Applications by Wenshan Cai and Vladimir Shalaev ISBN: 978-1-4419-1150-6 Springer.

MN-2.3. Quantum Computations and information processing

Total Contact Hours: 65

SECTION-A

Basics of Nanocomputing: Elements of Boolean Algebra and Binary System, Classical Logic Gates and Logic gate symbols (AND gate, OR gate, NOT gate, NAND gate, NOR gate, EXOR gate, EXNOR gate), Circuit Models. Linear Algebra and Dirac Notation : Hilbert Space, Operators, The Spectral theorem, Functions of Operators, Tensor Products, The Schmidt Decomposition Theorem.

Section B

Qubits and hypothesis of Quantum mechanics: The state of a quantum system, Time evolution postulate, Superposition and composite System, Measurement postulate, Mixed states and general quantum operation

Quantum model of computation: Quantum gates (one and two qubits gate), Universal set of quantum gates, Measurements with quantum circuits. Superdense coding, Quantum Teleportation and it application, Quantum Entanglement.

SECTION-C

Introduction to Quantum algorithms: Phase kick-back, The Deutsch Algorithm, The Deutsch-Jozsa Algorithm, Quantum phase estimation and quantum Fourier Transformation, Eigenvalue Estimation and finding orders, Shor's algorithm, Algorithms based on amplitude amplification. Grover's quantum Search algorithm, Search without knowing the success probability. Quantum Error Correction, Single-Qubit Measurement, Statistical Quantum computation, Adiabatic Quantum Computation, **Physical realizations of logic quantum gates in Quantum System:** Ion Trap Quantum Computer, Solid State Spin Quantum Computer, Superconductor Quantum Computer, Topological Quantum Computer, Liquid State Quantum Computer.

Text/Reference books:

2. Introduction to Quantum Computers by Gennady Berman, Gary Doolen, Ronnie Mainieri and Vladimir Tsifrinovich, Word Scientific.

3. Quantum computation and quantum information, by Michael A. Nielsen, Isaac L. Chuang.

MN2.4 Advanced characterization techniques:

Total Contact Hours: 65

Section A

Diffraction techniques: Introduction to x-ray sources: sealed tube x-ray source, rotating anode x-ray source, synchrotron source, single crystal diffraction, powder diffraction, Low Energy electron diffraction (LEED), neutron diffraction: interaction of neutron with matter, scattering cross section, scattering length density, light scattering by colloidal dispersion, dynamic light scattering (DLS), static light scattering, hydrodynamic radius, zeta potential.

Section B

Microscopes: Optical microscopy, fluorescence and confocal microscopy, transmission electron microscopy (TEM), scanning electron microscopy (SEM), Photolithography, other optical lithography (EUV, x-ray, LIL), p-beam lithography, e-beam lithography, soft lithography, nano imprint lithography, DTA, TGA, DSC techniques.

Section C

Spectroscopy Techniques: Ultraviolet (UV) and x-ray photoelectron spectroscopy (XPS), Auger electron spectroscopy (AES), secondary ion mass spectroscopy (SIMS), Rutherford back scattering, FTIR, UV-VIS, cathode luminescence and photo luminescence.

13. Electron Beam Analysis of Materials by Loretto, M. H., Chapman and Hall, 1984.

MNEL 2.1a ORGANIC AND POLYMER TECHNOLOGY

Total Contact Hours: 65

Section A

Introduction to polymers, Classification schemes, polymer structure and molecular weight and molecular averages. Polymer synthesis- Step growth, Chain Growth, Polymerization techniques, Synthetic polymers, Chemical structure determination. . Ideal chain model, Random walk model, excluded volume effect. Self-avoiding random work, radius of gyration.

Conformations – Single chain conformation, Thermodynamics of polymer solutions

Measurements of Molecular weight – Osmometry, Light scattering, Intrinsic Viscosity measurement, Gel – permeation Chromatography.

Solid State Properties – Amorphous state, crystalline state, Thermal transition and properties. Rause Model, Reptation Model.

Section B

Mechanical Properties- Mechanism of deformation and method of testing, Viscoelasticity and rubber elasticity. Degradation. Blends and composites- Additives, Polymer blends, Interpenetrating network. Introduction to polymer composites, introduction to Biopolymers, natural polymers and fibers.

Special Polymers- Engineering thermoplastics, polyimides, ionic polymers, polyaryletherketones, polyolifins, Inorganic polymers, liquid crystal polymers, conducting polymers, dendritic polymers, high performance fibers

Non linear Mechanical behavior – Basic processing operations, Polymer rheology: Non Newtonian flow, Viscosity Equation, Elastic properties of polymeric fluids, Melt instabilities, Drag reduction, analysis of simple flows, Rheometry, Modelling of polymer processing operation- Extrusion, Wire coating.

Section C

Polymers for advanced technology- Membrane science and technology, Biomedical Engineering and drug delivery, applications in Electronics, photonic polymers.

Metal containing Polymers – Cryochemical synthesis, structure, physicochemical properties, Use of precursors in synthesis, optically anisotropic metal polymer nanocomposites,

Plasmon absorption, Optical extinction by ion Implantationl.

Text/Reference books:

1. Metal – Polymer Nanocomposites; Ed. Luigi Nicolais and Gianfranco Carotennto, published by Wiley International (2005) ISBN 0471471313.

2. Physics of polymers by Gert Strobl Published by Springer (2nd Ed) ISBN 3540632034.
3. Polymer Science and technology by J. R. Fried, Pub PHI New Delhi (2002) ISBN 9788120327702.

MNEL 2.1b MEMS and NEMS Technology

Total Contact Hours: 65

Section A

Introduction to MEMS and NEMS, MEMS Design, Scaling of Micromechanical Devices, Mechanical Properties of MEMS materials, Materials for MEMS, Micromachining Technologies: Bulk, Surface, LIGA, Microfabrication Techniques: Wafer level processes, Pattern Transfer, Process Integration: Developing a process, Basic principles of process design.
Transduction Mechanism, Energy conserving transducers: Parallel plate capacitors, two port capacitors, Electrostatic and Magnetic actuators.

Section B

Elasticity: Constitutive equations of linear elasticity, Thermal expansion and thin film stress, Material behavior at large strains.
Structurs: Axially loaded beams, bending of beams, Anticlastic curvature, bending of plates, Effects of residual stresses and stress gradients, Plates with in plane stress.
Energy Methods: Elastic energy, the principle of virtual work, Varaitional methods, large deflections of elastic structures.

Section C

Applications of MEMS: Inertial sensors, Micromachined pressure and thermal sensors, Microbridge gas sensor, Microrobotics, Microscale vacuum pumps, DNA amplification, brief introduction to micro fluidics.
Fabrication Issues for NEMS and Their applications.

Text Book/Reference Books:

1. Microsystems Design, S. D. Senturia, Kluwer Academic Publishers
2. The MEMS Handbook, Mohmad Gad-el-Hak, CRC Press
3. Semiconductor Devices: Physics and Technology, S. M. Sze, (Second Ed.) Willey

MNEL. 2.1c Nano-Engineering of Biological systems.

Total Contact Hours: 65

Section A

General Introduction, Cellular organization, tissues, major organ systems, homeostasis. Evolution of biomedical instrumentation, components of biomedical instrumentation system, transducers, biosignals, biosensors, biopotential and physical measurements, blood gases & pH sensors, bioanalytical sensors, optical sensors.

Section B

Bioelectric phenomena-Neurons, basic biophysics tools and relationship, equivalent circuit model for the cell membrane, Hodgkin-Huxley model for the action potential, model of the whole neuron. Natural and biomimetic materials, biopolymer synthesis, phase separation in polymers, self assembly, biocompatibility, polymer degradation, biomedical applications including drug delivery, tissue regeneration.

Section C

Cell structure and components, protein structure, cell membranes, dynamics & morphogenesis of tissue, Growth factor, cell-material interaction, role of mechanical and biochemical environment, bioreactor for tissue growth, tissue grafts ,Fundamental Laws of mechanics, muscle and joint reaction forces, stress and strain, material behavior, soft tissue mechanics, Orthopadic mechanics, cardiac mechanics, blood flow and pressure measurement,Computational biology, the modeling process, bio-networks Biomedical imaging, radiation imaging, diagnostic ultrasound imaging, X-ray, medical resonance imaging, comparison of imaging modes.

MNEL 3.1a - Business Enterprises in Nanotechnology

This course will cover the key issues related to the effective identification, acquisition, development and exploitation of nanotechnology in a commercial environment. Previous training in the commercial aspect of high technology management is found lacking in number of areas, when applied to such a new technology. Nanotechnology is differentiated from the major technological booms of the past in IT and biotechnology by its far more interdisciplinary nature and its broader sphere of impact. Nanotechnology potentially affects very large part of product delivery supply chain and therefore requires a greater degree of understanding and integration of the supply and the customer base to extract maximum benefit.

Text/Reference books:

MNEL 3.1b - Nanotechnology and society

This course integrates three broad areas: science and technology policy, ethics and science communication. Students are introduce to key general principles in each area, then investigate their relevance to nanotechnology. For instance we examine what kinds of policy regimes and ethical discussion influence current development in the world. We also consider frame works used in different settings for the public understanding of the nanotechnology. The overall aim of this course is to encourage critical reflection and discussion of the broader social and potential interests, values, and intuitions shaping development in the field.

MNEL 3.1c - Nanotechnology in health care and environment

Present status of pharmaceuticals and fine chemicals, outline of biochemistry of cells of living organisms. Concepts of nano medicines, physical properties of molecules and supermolecular complexes within cells. Molecular machinery and manufacturing with due stress on programmable medical micromachines, tiny supercomputers through molecular computing, concept of nano robots/ molecular robotics smaller than a cell and their role in elimination of cancer, infection, clogged articles etc., retardation of aging phenomenon. Role of nano technology in bio technology, engineered enzymes, coated colloids in cosmetics in pharmaceuticals, encapsulated drugs for sustained release, sunscreen and UV protective cosmetics, bio medical tagging and bio magnetic separation, diagnostic content agent, bio medical implants. Nanomaterials in Biomedical Applications – drug delivery, tissue regeneration, cancer detection, imaging and diagnostics, outlook for future.

Reduced waste and improved energy efficiency. Waste remediation: Nanoporous polymers and their applications in water purification, Photo-catalytic fluid purification. Energy conversion. Hierarchical self-assembled nano-structures for adsorption of heavy metals. Pollution by Nano-particles.

MNEL 3.2a……Tissue Engineering

Introduction, structural and organization of tissues: Epithelial, connective; vascularity and angiogenesis, basic wound healing, cell migration, current scope of development and use in therapeutic and in-vitro testing. Cell culture- Different cell types, progenitor cells and cell differentiations, different kind of matrix, cell-cell interaction. Aspect of cell culture: cell expansion, cell transfer, cell storage and cell characterization, Bioreactors ; Molecular biology aspect- Cell signaling molecules, growth factors, hormone and growth factor signaling, growth factor delivery in tissue engineering, cell attachment: differential cell adhesion, receptor-ligand binding, and Cell surface markers.Scaffold and transplant-Engineering biomaterials, Degradable materials, porosity, mechanical strength, 3-D architecture and cell incorporation. Engineering tissues for replacing bone, cartilage, tendons, ligaments, skin and liver. Basic transplant immunology, stems cells ; Case study and regulatory issues-cell transplantation for liver, musculoskeletal, cardiovascular, neural, visceral tissue engineering. Ethical, FDA and regulatory issues.

MNEL 3.2b……. Nano-catalysis

Review of techniques of interpretation of kinetic data, material and energy balance across reactors with reference to their design, Detail coverage of design of fixed, fluidized, trickle, moving bed reactors. Nanocatalysis: Role of transition metals & metal oxides in homogeneous and heterogeneous catalysis and their mechanism of catalysis, manufacture of these catalysts in nano-form and their characterization. Silica, alumina, carbon as high temperature carriers for catalysts. Use of nanocatalysts in automobile pollution control, photocatalysis of toxics in effluents, gas sensors. Reactor design for manufacture of nanocatalysts and nanosupports: Design of flame aerosol reactors, diffusion and premixed flame reactors, co precipitation reactors, hot wall flow reactors; their mechanical features, modeling and simulations. Catalytic vapour –liquid- solid growth mechanism for understanding particle formation and growth during chemical vapour deposition, particle dynamics and CFD simulations of flame process based on fundamental equations for flow, heat and mass transfer, aerosol dynamics in flames.

MNEL 3.2c ……..RF and MMIC design.

RF transmitters and receivers, Device choices for circuits: MESFET, EMT, HBT, BiCMOS, BJT and LDMOS, RF circuit design techniques in MIC and MMIC form, Passive and ferrite components, Microwave filters, covering theory and techniques, including active techniques, Amplifier design: Impedance matching, stability, low noise techniques, power amplifier design and linearisation. Active non-reciprocal components: MMIC active isolators. Mixers and modulators, Oscillators: stability determination, phase noise analysis, injection and phase locking and frequency synthesis, Monolithic RF circuits, covering integration technology and design, CAD including MDS, Ultrafast opto-electronic driver and receiver circuits.

Practical

Nano fabrication and Characterization- I

Synthesis of nanometer scale particles of colloidal semiconductors such as TiO_2, CdS, ZnO, SnO_2, Cu_2S, CuCNS, Cu_2O, $BaTiO_3$, $SrTiO_3$ by wet chemical methods, hydrothermal methods, and pyrolytic or high temperature methods.

Characterization of colloidal semiconductor materials by UV-visible spectroscopy, XRF studies, XRD methods and determination of particle size using XRD half peak width.

Determination of conductivity type by Mott-Shottky plots, cyclic voltammetry and AC-impedance analysis.

Deposition of thin films of semiconductor nanostructures by doctor blading, screen printing, and using the Langmuir-Blogett film casting techniques.

Dye sensitization of semiconductor nanosctructures and construction of solar cells.

Synthesis and characterization of nanoparticles of technologically valuable natural minerals such as hydroxyapatite, ferric phosphate, colloidal silica nanoparticles and their characterization by XRD, XRF, FT-IR methods.

Clay-polymer nanocomposites: Clay-ionically conducting polymer nanocomposites and determination of their ionic conductivities by AC impedance analysis, clay-electronically conducting polymer nanocomposites and determination of their electronic and ionic conductivities through AC impedance analysis and current-time plots at constant applied potential using blocking and non-blocking electrodes.

Synthesis of layered double hydroxides and investigation of anion separation using layered double hydroxides.

Pillard clays and clay-polystyrene, clay-poly (vinyl alcohol), clay-poly (methyl methacylate), clay-polyacylonitrile, clay-poly (ethylene oxide) nanocomposites and determination of their mechanical and thermal properties.

Covalent attachment of semiconductor nanoparticles into textile fibres and textile materials. Investigation of stain-resistant properties and antimicrobial activities.

Preparation of mosquito-repellent textiles.

Modeling and Simulation Lab I and II

Nano fabrication and Characterization- II

Carbon nanotubes and carbon nanoparticles: Preparation of carbon nanotubes by pyrolysis of organic gases/Pyrolytic thermal treatment of graphite followed by annealing. Purification of carbon nanotubes, Investigation of extent of purification using XRD, SEM studies of carbon nanotubes (to be carried out elsewhere), Extraction of carbon nanoparticles from vehicle exhausts, Characterization and Particle size analysis using XRD.

Top-down approach to nanoparticles of local minerals: crushing, grinding and milling, Preparation of graphite nanoparticles.

Preparation of colloidal graphite nanoparticles and investigation of their technological uses as lubricants.

Preparation of self-assembled monolayers and their characterization using AFM, contact angle measurements, AC-impedance analysis.

22. Prof. Seema Verma	:	Member
23. Ms. Shalini Jharia	:	Member
24. Mr. Shekhar Yadav	:	Member
25. Ms. Shivani Saxena	:	Member
26. Ms. Sraja	:	Member
27. Dr. Supratim Mitra	:	Member
28. Dr. Sweta Parashar	:	Member

29. Dr. Vartika Kulshreshtha	:	Member
30. Dr. Vishant Gahlaut	:	Member
31. Prof. Rajeev Gupta	:	External Member
32. Prof. Ameer Azam	:	External Member
33. Prof. Sudhish Kumar	:	External Member
34. Prof. Deepak Bhatnagar	:	External Member

Note: Prof. S.C. Bose (External), Dr. Parvendra Tyagi (Internal) could not attend the meeting.

Before proceeding to discuss the agenda of the meeting, convener accorded a cordial welcome to all members who were present in the meeting.

1. BOS took up the confirmation of its last meeting held on 10th March, 2012 and 24th April, 2016 and no comments were received from the members, the Board resolved that the minutes of its last meeting be confirmed.
2. BOS reviewed and updated the existing panel of examiners in each panel of undergraduate and postgraduate examination of Electronics in accordance to the Byelaws 15:03:2002 of the Vidyapith. The list of examiners has been sent to the secrecy.
3. The board reviewed the Study/Curriculum, scheme of examination and proposed revisions in various courses of study as follows:

I. B.Sc. (Mathematics) Examination

i.	First Semester Examination, December, 2019	No Change
ii.	Second Semester Examination, April/May, 2020	No Change
iii.	Third Semester Examination, December, 2020	Minor Change [a]
iv.	Fourth Semester Examination, April/May, 2021	Minor Change [a]
v.	Fifth Semester Examination, December, 2021	Change [a, b]
vi.	Sixth Semester Examination, April/May, 2022	Change [a, b]

The Board reviewed the objectives, learning outcomes and existing courses of Electronics running in B.Sc. (Mathematics) programme and no modification in the syllabus was suggested in I year and II year. However board recommended the up gradation in text books and reference books. The list of upgraded text books, reference books and e-resources of the

Electronics courses running in B.Sc. (Mathematics) programme have been enclosed as **annexure I** (Page No 7 -21).

(a) The board proposed to chose at most 2 additional Open (Generic) audit/credit Elective from other disciplines opting at most 1 per semester in Semesters III, IV, V & VI with prior permission of respective heads, time table permitting.

(b) In III year board proposed to introduce electives in place of discipline courses. **Microprocessors, Communication systems, Introduction to photonics and Antenna Theory and Wave Propagation** have been proposed to include in the discipline electives.

II. B. Tech. (ECE) Examination

i.	First Semester Examination, December, 2019	Minor Change [a]
ii.	Second Semester Examination, April/May, 2020	Minor Change [a]
iii.	Third Semester Examination, December, 2020	Minor Change [a, b]
iv.	Fourth Semester Examination, April/May, 2021	Minor Change [a, b]
v.	Fifth Semester Examination, December, 2021	Revised [a, c]
vi.	Sixth Semester Examination, April/May, 2022	Revised [a, c]
vii.	Seventh Semester Examination, December, 2022	Revised [d, e, f]
viii.	Eighth Semester Examination, April/May, 2023	Revised [g, h, i, j]

Restructuring of the B.Tech. (ECE) scheme has been started from session 2017-18. Scheme and syllabus of I year, II year III year and IV year were presented in front of the board which are enclosed as annexure II (Page No. 22-73).

The following modifications have been recommended for approval:

(a) The board proposed to introduce language courses in I year and incorporate more foundation and vocational courses I year, II year, III year.

(b) The board advised to change the credit from 3 to 4 in *Complex Variables course.*

(c) Upgradation in the syllabus of ***Analog Communication, Analog Electronics, Microwave Engineering, Digital Communication, Control systems*** **for** the **session 2021- 2022** in the curriculum. **Microwave Electronics and Analog integrated circuits** have been renamed as **Microwave Engineering and Analog Electronics**, respectively.

(d) Inclusion of ***Antenna Analysis*** instead of Antenna and Radar course from the session 2022-2023.

(e) The UIL Project is shifted from 7^{th} semester to 8^{th} semester. The change will be applicable from session 2019-20.

(f) Inclusion of *Mechatronics* and *Robotics and Automation* course as discipline electives from the session 2022-2023 in the curriculum keeping in view of interdisciplinary approach of curriculum structure.

(g) Board proposed some new reading electives from the session 2022- 2023 in the curriculum as follows:

- *Telecommunication Switching Systems and Networks*
- *Multimedia Compression and Communication*
- *Electronic Packaging*
- *Professional Ethics.*

(h) Board proposed inclusion of few online courses as reading elective from the **session 2022- 2023** in the curriculum as follows:

- *Electric Vehicles*
- *IoT Sensors and Devices*
- *Electromagnetic Compatibility.*

(i) 3rd year and 4th year of Session 2019 -20 and 2020-21 will be same as session 2021-22 and session 2022-23.

(j) The board advised to introduce open elective in the VII semester. In addition, board proposed to chose at most 2 additional Open (Generic) audit/credit Elective from other disciplines opting at most 1 per semester in Semesters III, IV, V, VI, and VII with prior permission of respective heads, time table permitting.

III. M.Sc. (Electronics) Examination

i.	First Semester Examination, December, 2019	Revised [a,]
ii.	Second Semester Examination, April/May, 2020	Revised [a, b, c]
iii.	Third Semester Examination, December, 2020	Revised [b,c]
iv.	Fourth Semester Examination, April/May, 2021	Revised [d,e]

The Board reviewed the existing course of M.Sc. (Electronics) examination and recommended change in the scheme and syllabus. **The board also suggested that whenever there is a change or modification in the B.Tech. (ECE) courses, which are common with the M.Sc.(Electronics) Programme, will be affected in the M.Sc. (Electronics) Programme simultaneously.** The changed scheme and syllabus are enclosed as annexure III (Page No. 74-132).

The following modifications have been recommended for approval:

(a) Inclusion of *Signals, Systems and Networks, Semiconductor Devices and Circuits* courses in the curriculum.

(b) Addition of elective course in II semester. Inclusion of Electives in the curriculum as follows:

- *Basics of Nanoelectronics*
- *Mechatronics*
- *Audio and Video Systems*
- *Geoinformatics*
- *Robotics and Automation*
- *Biomedical Instrumentation*
- *Fiber Optics and Communication*
- *Analytical Instrumentation*
- *Digital Signal Processing*
- *Communication Networks*
- *Optical Network*
- *Satellite Communication*
- *Mobile Communication*
- *Radar Navigation*
- *Power Electronics*
- *Antenna Analysis*

(c) Addition of open elective course in III semester. In addition, board proposed to chose at most 2 additional Open (Generic) audit/credit Elective from other disciplines opting at most 1 per semester in Semesters II, and III with prior permission of respective heads, time table permitting.

(d) Addition of new reading electives in the curriculum as follows:

- *Telecommunication Switching Systems and Networks*
- *Multimedia Compression and Communication*
- *Electronic Packaging*
- *Professional Ethics.*

(e) Board proposed inclusion of few online courses as reading elective for the session 2020- 2021 in the curriculum as follows:

- *Electric Vehicles*
- *IoT Sensors and Devices*
- *Electromagnetic Compatibility*

IV. M.Tech. (VLSI Design)

i.	First Semester Examination, December, 2019	Revised [a]
ii.	Second Semester Examination, April/May, 2020	Revised [a]
iii.	Third Semester Examination, December, 2020	Revised [b, c]
iv.	Fourth Semester Examination, April/May, 2021	Revised [b, c]

The Board reviewed the existing course of M.Tech. (VLSI Design) and recommended few changes in the list of electives and reading electives. The Board also reviewed the text books and reference books of existing courses of M.Tech. (VLSI Design) and recommended upgradation in text books and reference books. E-resources also have been included for referencing. The board also suggested some of the online courses as reading elective for the programme. The updated syllabus, list of electives and reading electives are enclosed as **annexure IV** (Page No. 133-169).

The following modifications have been recommended for approval:

(a) The board advised to incorporate open elective course in the II semester and include of *Photonics Integrated Circuits* in the list of discipline electives. In addition, board proposed to choose at most 2 additional Open (Generic) audit/credit Elective from other disciplines opting at most 1 per semester in Semesters I, and II with prior permission of respective heads, time table permitting. The board also suggested to amend the list of discipline electives.

(b) Addition of *Advanced Electronic Packaging and Compound Semiconductor Technology* in the list of reading electives.

(c) Inclusion of online courses namely *Digital Image Processing and Organic Electronic Devices* as reading electives in the curriculum.

V. B.Sc. (Mathematics)/ B.Sc. (Geology)/B.Sc-B.Ed. Examinations:

i.	First Semester Examination, December, 2019	Revised[(a)]
ii.	Second Semester Examination, April/May, 2020	No Change
iii.	Third Semester Examination, December, 2020	No Change
iv.	Fourth Semester Examination, April/May, 2021	Revised [(b,c)]
v.	Fifth Semester Examination, December, 2021	Change [(d,e,f)]
vi.	Sixth Semester Examination, April/May, 2022	Change[(f)]

The Board reviewed the objectives, syllabi, learning outcomes of the B.Sc. (Mathematics) / B.Sc. (Geology)/B.Sc-B.Ed. programmes.

(a) The board has reframed the experiment list of **Electronics Lab (PHY 104L)** and suggested to add some more experiments relevant to existing syllabus of Physics in first semester.

(b) The board has suggested the name of the course (course code: PHY 203) as **"Thermodynamics, Statistical and Mathematical Physics"** instead of **"Statistical and Mathematical Physics".**

(c) The board has reviewed the experiment list of physics lab (course code: PHY 202L). The board found that some of the experiments are not being matched with the theory taught in the relevant semester and therefore, some modifications have been made in the experiment list.

(d) The board has reviewed the experiment list of physics lab (course code: 5.2). The board found that some of the experiments are not being matched with the theory taught in the relevant semester and therefore, some modifications have been made in the experiment list.

(e) The board has suggested the name of the course (course code: PHY 203) as **"Quantum Mechanics and Spectroscopy"** in place of **"Quantum, Atomic and**

Molecular Physics" and the name of **"Atomic Physics Lab"** changed to **"Quantum Mechanics and Spectroscopy Lab".**

(f) The board has suggested to keep discipline electives and related labs in V and VI semester of the program.

The revised syllabus, course learning outcomes, list of suggested books and e-resources of the B.Sc. (Mathematics) programme is attached and marked as **Annexure-V** (Page No. 170-190).

The corrected name of the courses as well as name of Labs and the contents changed in the revised syllabi should be implemented for the session 2019-20.

VI. B.Sc. (Aviation Science) Examinations:

The course learning outcomes of the course: Basic Physics-I (course code: PHY 102), list of suggested books and e- resources of the B.Sc. (Aviation Science) programme is attached and marked as **Annexure-VI** (Page No. 191).

VII. M.Sc. (Physics) Examinations:

The Board discussed the recent trends in physical sciences at postgraduate level and found that the knowledge of computational software is the necessity of today's research environment. In addition to this, board suggested to give more weight-age to self-learning and independent research activities.

i.	First Semester Examination, December, 2019	Revised[(a)]
ii.	Second Semester Examination, April/May, 2020	Revised[(b)]
iii.	Third Semester Examination, December, 2020	Revised[(c,*)]
iv.	Fourth Semester Examination, April/May, 2021	Revised[(d,*)]

(a) Board reviewed the syllabi of M.Sc. Physics I Semester and found that the courses *Classical Mechanics* (Course Code: PHY 403) and *Mathematical Physics* (Course Code: PHY 404) must be revised. It was found that the content of the course mentioned was not systematic and therefore the board has suggested restructuring the syllabi.

(b) Board reviewed the syllabi of M.Sc. Physics II Semester and found that the courses *Classical Electrodynamics – I* (Course Code: PHY 402) and *Quantum Mechanics* (Course Code: PHY 407) must be revised. The board has suggested minor changes in the course *Classical Electrodynamics – I* (Course Code: PHY 402); while in the *Quantum Mechanics* (Course Code: PHY 407) some mathematical and conceptual details and revision of perturbation theory is required to explain the need of approximation methods.

(c) Board reviewed the syllabi of M.Sc. Physics III Semester and found that the courses *Physics of Lasers and Lasers Applications* (Course Code: PHY 520), *Condensed Matter Physics-I* (Course Code: PHY 505), *Condensed Matter Physics-II* (Course Code: PHY 506) and *Physics Lab - II* (Course Code: PHY 518L) must be revised. It was found that the content of the course mentioned was not systematic and therefore the board has suggested restructuring the courses *Physics of Lasers and Lasers Applications* (Course Code: PHY 520); while the list of the experiments has been divided into two parts: part A and part B instead of three parts. In addition to these changes, the board has also proposed to include **Reading Elective** in the third semester.

(d) Board reviewed the syllabi of M.Sc. Physics IV Semester and no changes were suggested except laboratory practices of physics lab-III (Course code- PHY 519L). The board has suggested that the list of the experiments should be divided into two parts: part A and part B instead of three parts.

(*) Board has proposed new electives in the curricula i.e. **Bio Physics-I** and **Bio Physics-II** in M.Sc. IIIrd and IVth semester respectively.

The specific programme outcome, revised syllabus, course learning outcomes, list of suggested books and e- resources of the M.Sc. (Physics) programme is attached and marked as **Annexure-VII** (Page No. 192-230). The detailed proposed scheme of M.Sc. (Physics) programme is attached as **Annexure VII A** (Page No. 231-236).

The content changed in the revised syllabi should be implemented for the session 2019-20.

VIII. M.Tech. (Nanotechnology) Examinations:

i.	First Semester Examination, December, 2019	Revised$^{(a,*)}$
ii.	Second Semester Examination, April/May, 2020	Revised$^{(*)}$
iii.	Third Semester Examination, December, 2020	No Change
iv.	Fourth Semester Examination, April/May, 2021	No Change

(a) The board has revised the whole syllabus of M.Tech (Nanotechnology) and found that the syllabus of **Nano-photonics and Optoelectronics** course (code: ELE506) should be revised.

(*) Apart from the theory course, the board has also reframed the simulation lab-I and –II (code: NANO 502L & NANO 503L). The revised syllabus is enclosed as **Annexure–VIII** (Page No. 242-256). The detailed proposed scheme of M.Tech. (Nanotechnology) programme is attached as **Annexure VIII A** (Page No. 237-241).

4. The Board reviewed the curriculum for the courses running in the other programmes of the Vidyapith. The recommendations as follows-

Bachelor of Technology (BT/CE/EC/EE/EI/CS/IT/MCTR)		
ENGG 202	Basic Electronics	No Change
Bachelor of Technology (EI)		
VLSI 401	VLSI Design	No Change
ELE 201	Digital Electronics	No Change
ECE 302	Communication Engineering	No Change
Bachelor of Technology (EE/EI/MCTR)		
ELE 201	Digital Electronics	No Change
Master of Science (Physics)		
ELE 406	Principles of Digital Electronics	No Change
Bachelor of Science (Aviation Science)		
PHY 102	Basic Physics-I	No Change
Bachelor of Technology (All Branches)		
PHY 101	Applied Optics	No Change
PHY 105	Engineering Mechanics	No Change
PHY 106	Modern Physics	No Change

5. The board considered the report of examiners of different examinations. Most of the examiners found that the content of the answers were satisfactory or good. The reports are attached as **annexure IX** (Page No. 257).

   The board has reviewed the reports received from the examiners of different examinations and their observations are as follows:

   - reports were satisfactory
   - Performance of the students in most of the papers is up to the mark.
   - The numerical solving ability of the students was found less.

   After observing the reports received from the examiners of different examinations the following suggestions were given:

   - The numerical solving ability of the students is a major concern and therefore, it should be addressed through proper tutorial classes.
   - To give equal weightage for each section (three sections course paper), the number of questions to be attempted compulsorily should be **six** instead of **five**.

6. BOS has thoroughly analysed the quality of the session 2017-2018 question papers keeping the following points in mind

   - Percentage of analytical based question
   - Percentage of descriptive questions
   - Percentage of numerical based questions

   In most of the paper, it has been found that there has been a judicious balance of all these components in the papers.

The board has evaluated the question papers of the periodical and semester examinations and found that the quality of the question papers is maintained at UG and PG level. To improve the standard of the question paper, the board has given following suggestions :

- Include more numerical/logical problems.
- Instead of direct questions and derivations, some small conceptual questions must be put in the question paper to check the analytical ability of the student.

7. **To review the degree title for the Ph.D. Scholars**

Currently Ph.D. degree is awarded in various disciplines namely Electronics, Electronics Engineering, Digital Communication Engineering and many more. To remove the ambiguity it is proposed that the degree title in sciences should be Electronics or Physics and for engineering background, it should be awarded in Electronics Engineering.

The meeting ended with vote of thanks.

Annexure I

Name of Programme: B.Sc. (Mathematics)

Disciplinary Course-Electronics

Programme Educational Objectives:

- To provide necessary knowledge and leadership skills for a successful professional career.
- To enhance learning and to adapt in a world of constantly evolving and innovative electronics technology.
- To develop the ability to collaborate with others to solve problems with creative thinking and effective communication.

Programme Outcomes: On completion of the B.Sc. the student will be able to

- Apply knowledge of mathematics and science.
- Understood the basic concepts, fundamental principles, and the scientific theories related to various scientific phenomena and their relevancies in the day-to-day life.
- Acquire the skills in handling scientific instruments, planning and performing in laboratory experiments.
- Think creatively (divergently and convergent) to propose novel ideas in explaining facts and figures or providing new solution to the problems. Realized how developments in any science subject helps in the development of other science subjects and vice-versa and how interdisciplinary approach helps in providing better solutions and new ideas for the sustainable developments.
- Realized that knowledge of subjects in other faculties such as humanities, performing arts, social sciences etc. can have greatly and effectively influence which inspires in evolving new scientific theories and inventions.
- Imbibed ethical, moral and social values in personal and social life leading to highly cultured and civilized personality. Developed various communication skills such as reading, listening, speaking, etc.
- Function with multidisciplinary teams.

Programme Scheme:

B.Sc. (Mathematics) Semester - I (December, 2019)
Disciplinary Course-Electronics

		• Familiarized with radio and TV receiver.	Demodulation. 5. To study the PCM and its Demodulation. 6. To study the PPM and its Demodulation. 7. Familiarization with Radio Receiver - Block Diagram. 8. Familiarization with TV Receiver - Block Diagram. Project.	4. To study the PWM and its Demodulation. 5. To study the PCM and its Demodulation. 6. To study the PPM and its Demodulation. 7. Familiarization with Radio Receiver - Block Diagram. 8. Familiarization with TV Receiver - Block Diagram.	
13.	**Antenna Theory and Wave Propagation**	After completion of this course, students will be able to: • Analyze Maxwell's equation in different forms (differential and integral) and apply them to diverse engineering problems. • Examine the phenomena of wave propagation in different media and its interfaces and in applications of microwave engineering. • Recall electromagnetic plane waves. Apply principles of electromagnetic to explain antenna radiation. Explain various antenna parameters. • Explain dipole antennas. Establish mathematical equations for various parameters of thin linear antenna.		**UNIT I** Review of Electromagnetic theory: Cartesian coordinate system, Circular coordinate system, Spherical coordinate system (dot product, cross product, divergence & curl). Maxwell's equations in differential and integral form, Boundary Conditions for Electrostatics and magnetostatics. **UNIT II** Wave equation and its solution, Poynting vector, General Transmission line equation, input impedance, characteristic impedance, Reflection coefficient, standing wave ratio, Practical problems in transmission lines. **UNIT III** Introduction to antennas, network theorems, Antenna characteristics (Radiation pattern, Directivity, Gain, Polarization, Effective aperture, Friis transmission formula), Vector potentials for electric and magnetic current sources. **UNIT IV** Wire antennas: Hetzian and Marconi antenna, Half wave dipole, monopole and loop antenna, Antenna arrays: Linear array, Two element array, Uniform array, Binomial array **UNIT V** Practical antennas: Slot antenna, Horn	

				antenna, Yagi-uda antenna, folded dipole antenna, Helical antenna.	
				Recommended Books: 1. Hyat, W. H. &. Jr. John A. Buck. (2018). *Engineering Electromagnetics, Student edition*. McGraw Hill Education. 2. Liao, S. Y. (1989). *Microwave devices and circuits*. Pearson Education India. 3. Balanis, C. A. (2016). *Antenna theory: analysis and design*. John wiley & sons. 4. Sadiku, M. N., & Kulkarni, S. V. (2015). *Principles of electromagnetics*. Oxford University Press. 5. Kraus, J. D., Marhefka, R. J., & Khan, A. S. (2006). *Antennas and wave propagation*. Tata McGraw-Hill Education. 6. Collin, R. E. (2007). *Foundations for microwave engineering*. John Wiley & Sons.	
14.	**Antenna Theory and Wave Propagation Lab**	After completion of this laboratory course, students will be able to: • Use HFSS tool to design and analysis of antennas. • Design various type of antennas • Measure and analyse radiation pattern of antennas.		1. To design dipole antenna in HFSS 2. Design monopole antenna in HFSS 3. Design horn antenna in HFSS 4. To measure radiation pattern of Horn Antenna 5. To measure radiation pattern of log periodic Antenna 6. To measure radiation pattern of micro strip patch Antenna 7. To measure radiation pattern of YAGI-UDA Antenna.	
15.	**Introduction to Photonics**	After completion of this course, students will be able to: • Explain the light propagation through optical fibers. • Explain the various light sources and optical detectors.		**Unit 1** Introduction, Ray theory, Optical fibers: multimode, single mode, step index, graded index, plastic & glass fibers. Transmission Characteristics of Optical Fibers: Attenuation, Material absorption loss, refractive index profile, Dispersion	

		• Design fiber optic transmitter and receiver system.		(intermodal & intramodal), Dispersion Shifted Fibers, Dispersion Compensating Fiber. **Unit 2** Emission and absorption of radiation, Einstein relation, Absorption of radiation, Population inversion, Optical feedback, Threshold condition. Population inversion and threshold, Basic idea of solid state, semiconductors, gas & liquid laser. Basic concept of Q-switching and mode locking. **Unit 3** Fiber Structure, Material, Characteristics, Power & Efficiency of Light Emitting Diode. Optical detection principles, quantum efficiency, Responsivity, p-n and p-i-n photo diode, Avalanche photo diodes. **Unit 4** Measurements of Fiber Attenuation, Dispersion, Refractive Index Profile, Cut off Wave Length, Numerical Aperture & Diameter. Optical Time Domain Reflectometry (OTDR) Field measurement through optical time domain reflectometry, Laser **Unit 5** Laser based systems for measurement of distance, velocity, liquid level. Fibre optic gyroscope, Holography: basic principle and applications. **Recommended Books:** **1.** Senior, John.M. (2009). *Optical Fiber Communication Principles & Practice***.** New Delhi: PHI Publication. **2.** Keiser, Gerd. (1991). *Optical Fiber Communication***.** New Delhi: McGraw Hill Publication. **3.** Ghatak, A.K. & Thyagarajan, K.	

				(1981). Laser Theory and Applications, 1 edition. Springer	
16.	**Introduction to Photonics Lab**	After completion of this laboratory course, students will be able to: • Understand the characteristics of an optical fiber and LED. • Understand and measure the basic properties of propagation of light in dielectric Optical fibre including losses, attenuation and coupling. • Explain the working of optical power meter and various sensors.		1. To study Analog Link. 2. To study Digital link. 3. To measure Numerical aperture. 4. To study Propagation Loss. 5. To study Bending Loss. 6. To study EYE Pattern. 7. To calculate BER. 8. To study the characteristics of optical source. 9. To study the characteristics of Optical detector.	

Annexure II

Name of Programme: Bachelor of Technology (ECE)

Programme Educational Objectives: The B.Tech. (ECE) programme aims for the holistic development of students through the unique and innovative fivefold educational ideology of Banasthali Vidyapith. Electronics now become the integral part of our lives. As the world continues to rely on Electronics technology, there is a great requirement for those engineers who are able to design, create, and maintain the many products and systems that support electronics technology. Electronics engineers develop innovative technology solutions in a wide range of areas from handheld communications to solar panels; from cardiac pacemakers to autonomous robots; from wireless networks to bio-engineered sensors that detect dangerous pathogens; and intelligent surveillance systems that perform face and motion recognition.
The program aims to deepen the knowledge and skills of the students on the basic concepts and theories that will equip them in their professional work involving analysis, systems implementation, operation, production, and maintenance of the various applications in the field of Electronics and Communications. The curriculum is designed in a way that it will equip students with a solid grasp of mathematical, scientific, and engineering concepts, through classroom education and laboratory exercises. Graduates of the program are expected to develop and use professional skills that facilitate their continued carrier growth well beyond their graduation.

The main objectives of the program are:

- To provide students solid foundation in mathematical and engineering fundamentals required to solve engineering problems and also to pursue advanced studies. This serves them lifelong in their professional domain as well as higher education.
- To develop an ability to integrate fundamental knowledge of basic science, mathematics and engineering to work on complex problems in the field of Electronics and Communication.
- To prepare engineers to work in inter-disciplinary environment, either independently or in a team, and demonstrate leadership qualities.
- Practice the ethics of their profession, consistent with a sense of social responsibility and develop their engineering design, problem–solving skills and aptitude for innovations as they work individually and in multi-disciplinary teams.
- Inculcate a lifelong learning culture.
- To formulate problems and projects and to plan a process for solution.
- Communicate effectively and manage resources skilfully as members and leaders of the profession.
- To prepare competent engineers at various national and international levels.

Programme Outcomes:

PO1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and Electronics engineering to the solution of complex engineering problems.

PO2. **Problem analysis:** Review, Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using principles of mathematics, natural sciences, and engineering sciences.

PO3. **Design/development of solutions:** Develop solutions for complex engineering problems and design system components/processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. **Conduct investigations of complex problems:** Use scientific and engineering knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. **Modern tool usage:** Apply appropriate techniques, resources, and modern engineering tools including MATLAB, LabView, Proteus, VHDL, Arduino and related hardware to complex engineering activities with an understanding of the limitations.

PO6. **The engineer and society:** Apply reasoning gained by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge for sustainable development.

PO8. Ethics: Apply ethical principles and commit to professional ethics responsibilities and norms of the engineering practice.

PO9. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary surroundings.

PO10. Communication Skill: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Programme Scheme:

1. **Highlighted with gray indicates the changed subject/course/credit/modification in syllabus/ new course added.**
2. **Text in white color with black background indicates swapping of course.**

ELE 403	Basics of Nano electronics		Robotics and Automation		Electromagnetic Compatibility
ECE 403	Mobile Communication		Power Electronics		Telecommunication Switching Systems and Networks
ECE 405	Radar Navigation		Mechatronics		Electric Vehicles
ELE 304	Digital Signal Processing				IoT Sensors and Devices

Student can opt for at most 2 additional Open (Generic) audit/credit Elective from other disciplines opting at most 1 per semester in Semesters III, IV, V or VI with prior permission of respective heads, time table permitting.

S. No.	Course List	Learning Outcome	Existing Syllabus	Suggested Syllabus	Remarks
1.	**ECE 201, Signals, Systems and Networks**	After the completion of course student will be able to: • Analyze linear time invariant system in time and frequency domain • Apply network theorem to analyze the electrical circuit. • Explain two port parameters.	—	—	**No Change in course contents.**
			Suggested Books: 1. V. Oppenheim, A. V. Willsky, S. Hamid Nawab. Signal and Systems. Second Edition, Prentice Hall. 2. M.E. Van Valkenburg. Network Analysis. Third Edition, Prentice Hall India. 3. J. G. Proakis, D. G. Manolakis. Digital Signal Processing. Fourth Edition, Pearson. 4. F. F. Kuo. Network Analysis and Synthesis. Second Edition, John Wiley and Sons.	**Recommended Books:** 1. Oppenheim A. V., A. V. &Nawab S. H. (2015). *Signal and Systems (2/e)*, Boston: Pearson Publication 2. Valkenburg M.E. Van (2015). *Network Analysis (3/e)*. New Delhi: Pearson Publication 3. Proakis J. G. &Manolakis D. G. (2007). *Digital Signal Processing: Principles, Algorithms, and Applications (4/e)*. New Delhi: Pearson Publication 4. Kuo F. F. (2010). *Network Analysis and Synthesis (2/e)*. New Delhi: John Wiley & Sons Publication **Suggested E-resources:** 1. **Circuit Theory** by Prof. S.C. Dutta Roy, Department of Electrical Engineering, Indian Institute of Technology, Delhi. https://nptel.ac.in/courses/108102042/ 2. **Principles of Signals and Systems** by Prof. Aditya K. Jagannatham, Department of Electrical Engineering Indian Institute of Technology, Kanpur. https://nptel.ac.in/courses/108104100	
2	**ELE 201, Digital Electronics**	After completion of this course, students will be able to: • Students will be able to describe and minimize various digital systems. • Students will understand design steps for combinational and sequential circuits. • Students will understand basic	—	—	**No Change in course contents.**
			Suggested Books: 1. M. Morris Mano. Digital Design. Third Edition. Prentice Hall. 2. Charles H. Roth, Larrry N. Kiney. Fundamentals of Logic Design. Sixth Edition, Cengage Learning. 3. D.P. Leach, A. P. Malvino, G. Saha. Digital Principles and Applications. Eighth Edition, McGraw Hill. 4. John F. Wakerly. Digital Design:	**Recommended Books:** 1. M. M. Morris R. & C. Michael D. (2013). *Digital Design (5/e).* Pearson Publication 2. R. Charles H., JR. & K. Larrry N. (2010). *Fundamentals of Logic Design (6/e).* Stanford, USA: Cengage Learning 3. Malvino, A. P., & Leach, D. P. & S. Goutam (2014). *Digital Principles and Applications (8/e)*. New Delhi: Tata McGraw Hill Education Private limited.	

		memory architectures and their functionality.	Principles and Practice. Fourth Edition, Pearson. 5. T. C. Bartee. Digital Computer Fundamentals. Sixth Edition. McGraw-Hill. 6. J. P. Hayes. Computer Architecture and Organization. Third Edition, McGraw Hill.	4. W. John F. (2008). *Digital Design: Principles and Practices (4/e).* Pearson Publication 5. B. Thomas C. (1981). *Digital Computer Fundamentals (5/e).*McGraw-Hill Publication 6. Hayes, J. P. (2002). *Computer architecture and organization*. New York, USA: McGraw-Hill Publication **Suggested E-resources:** 1. **Digital Circuits** by Prof.Santanu Chattopadhyay, Department of Electronics and Electrical Communication Engineering, IIT Kharagpur. https://onlinecourses.nptel.ac.in/noc18_ee33/preview **2. Digital Electronic Circuits**by Prof.Goutam Saha, Dept. of Electronics and Electrical Communication Engineering at IIT Kharagpur**.** https://onlinecourses.nptel.ac.in/noc19_ee09/preview 3. **Digital Circuits and Systems**by Prof. S. Srinivasan, Department of Electrical Engineering, Indian Institute of Technology Madras. https://nptel.ac.in/courses/117106086/	
3.	**ELE 201L, Digital Electronics Lab**	After completion of this laboratory course, students will be able to: • Understand the basic digital circuits and to verify their operation. • Explain the elements of digital system abstractions such as digital representations of information, digital logic, Boolean algebra, state elements and finite state machine (FSMs).	____	____	**Learning Outcomes added** **No change in experiment list.**

		• Create a gate-level implementation of a combinational and sequential logic functions described by a truth table using and/or/inv gates, multiplexers.			
4.	**ENGG 202, Basic Electronics**	After completion of this course, students will be able to: • Understand the fundamental of semiconductors and design semiconductor circuits.. • Understand the different type of diode/ transistors with their responses. • Analyze various types of oscillators available with their utilization.	—	—	**No Change in course contents.**
			Suggested Books: 1. J. Millman, C. Halkias. Integrated Electronics. Second Edition, McGraw Hill. 2. R. L. Boylested. Electronics Devices and Circuit Theory. Tenth Edition, Pearson. ~~3. A. P. Malvino. Electronic Principles. Sixth Edition, McGraw Hill.~~ 4. N. B. Somanatha. Electronics Devices and Applications. First Edition, Prentice Hall India. 5. A. S. Sedra, K. C. Smith. Microelectronics Circuits: Theory and Applications. Seventh Edition, Oxford University Press. 6. B. G. Streetman, S. K. Banerjee. Solid State Electronic Devices. Sixth Edition, Prentice Hall India.	**Recommended Books:** 1. Millman. J, Halkias. C, Parikh. C. (2017). *Integrated Electronics*. *(2/e).* New Delhi: TMH Publications. 2. Boylestad.R. (2012). *Electronic Devices& Circuits Theory.(6/e).* New Delhi: Pearson Publications. 3. Somanathan B. Nair. (2006). *Electronics Devices and Applications.* New Delhi: Prentice Hall India Learning Private Limited 4. Smith. S.(2008). *Microelectronics Circuits. (5/e).* New Delhi: Oxford press, India. 5. Streetman Ben. G. (2006). *Solid State Electronic Devices (6/e)*. New Delhi: PHI Publications. **Suggested E-resources:** **1. Basic Electronics** by Prof. Pramod Agarwal, Department of Electrical Engineering, Indian Institute of Technology, Roorkee. https://nptel.ac.in/courses/117107095/4 **2. Circuits and Electronics by** Anant Agarwal, Massachusetts Institute of Technology: MIT OpenCourseWare. https://ocw.mit.edu/courses/electrical-engineering-and-computer-science/6-002-circuits-and-electronics-spring-2007/video-lectures/6002_l16.pdf	**~~Deleted~~**

5.	**Electrical and Electronics Measurements**	After completion of this course, students will be able to: • Measure various electrical parameters with precision and accuracy. • Select appropriate transducers for measurement of physical parameter. • Use Signal Generator and CRO for appropriate measurement. • Test and troubleshoot electronic circuits using various measuring instruments.	—	—	**No Change in course contents.**
			Suggested Books: 1. A. K. Sawhney. A Course in Electrical and Electronic Measurements and Instrumentation. Eleventh Dhanpat Rai Publication. 2. R.K. Jain. Mechanical and Industrial Measurements. Twelfth Edition, Khanna Publishers. 3. B.C.Nakra, K.K. Chaudhry. Instrumentation, Measurement and Analysis. Third Edition, McGraw Edition. ~~4. E. O. Doebelin.MeasurementSystems:Application and Design. Fourth Edition. McGraw Hill.~~ ~~5. D. P. Eckmann, Industrial Instrumentation. First Edition, CBS Publications.~~ 6. H.S. Kalsi. Electronic Instrumentation. Third Edition, Tata McGraw Hill. 7. S.K. Singh. Industrial Instrumentation and Control. Third Edition, Tata McGraw Hill. ~~8. C. S. Rangan, G. R. Sarma, V. S. V. Mani. Instrumentation: Devices and Systems. Second Edition, McGraw Hill.~~ ~~9. D. V. S. Murthy. Transducers and Instrumentation. Second Edition, Prentice Hall India.~~	**Recommended Books:** 1. SawhneyA.K. (2015). *A Course in Electrical and Electronic Measurements and Instrumentation.* New Delhi: Dhanpat Rai & Co Publication 2. Jain R.K. (2008). *Mechanical and Industrial Measurement.* New Delhi: Khanna Publishers 3. Nakra B.C. & Chaudhry K.K. (2013). *Instrumentation, Measurement and Analysis.* New Delhi: Tata McGraw Hill Publication 4. Kalsi H.S. (2017). *Electronic Instrumentation.* New Delhi: Tata McGraw Hill Publication 5. Singh S.K.(2010). *Industrial Instrumentation and Control.* New Delhi: Tata McGraw Hill Publication **Suggested e-Resource:** **1. Industrial Instrumentation** by Prof. Alok Barua, Department of Electrical Engineering, Indian Institute of Technology, Kharagpur. https://nptel.ac.in/courses/108105064	**~~Deleted~~**
6.	**Electrical and Electronics Measurements Lab**	After completion of this laboratory course, students will be able to: • Develop an understanding of construction and working of different measuring instruments	~~1. To study behavior of Inductive Sensors and calculate its switching hysteresis.~~ ~~2. To study behavior of Capacitive Sensors and calculate its Reduction factor.~~ ~~3. To study behavior of Magnetic Sensors and plot its response curve.~~ ~~4. To study behaviour of Ultrasonic Sensors and calculate its switching hysteresis.~~	1. To study Hall Effect. 2. To study principle of Thermocouple. 3. To study principle of Load cell. 4. To study principle of Thermistor. 5. To study principle of strain guage. 6. To study Principle of LVDT 7. To study De sauty bridge. 8. To study Wein AC bridge.	**Learning outcomes added.** **~~Deleted~~** **Added**

		• Develop an ability to use measuring instruments and AC and DC bridges for relevant measurement • Select appropriate passive or active transducers for measurement of physical phenomenon.	~~5. To study behaviour of Photo electric sensors and calculate its switching frequency.~~ ~~6. To detect level with the help of Ultrasonic, Photo electric and Capacitive sensors.~~ ~~7. Logic linking of Sensors: OR gate and AND gate.~~ ~~8. To study Wheatstone bridge and find the unknown resistance.~~ ~~**9.** To calculate the frequency and phase with Lissajous figure pattern using DSO.~~	9. To study CRO circuitry in detail.	
7.	**ELE 205, Semiconductor Devices and Circuits**	After completion of this course, students will be able to: • Explain the energy bands, temperature effects, carrier transport of semiconductor devices • Explain the switching times, capacitance of PN junction, bipolar and unipolar transistor behavior and their differences • Analyze the various feedback circuits and design power amplifiers.	—	—	**No Change in course contents.**

23.	**Microwave**	After completion of this	~~**Microwave Electronics Lab**~~	**Microwave Engineering Lab**	**Learning**

	Electronics Lab	laboratory course, students will be able to: • Understand the concept and working of microwave bench and different components connected on a bench. • Analyze the behaviour of various microwave components. • Verify properties/ characteristic of microwave source, tees and directional coupler.	1. Determine the operating frequency of reflex klystron. 2. Draw the V-I characteristics of Reflex klystron 3. Draw the characteristics of attenuator 4. To verify the wave-guide law 5. To study the directivity and coupling coefficient of Directional Coupler. 6. To study the properties of magic Tea and also determine isolation and coupling coefficient. 7. To Measure the VSWR of (i) Short circuit (ii) Open circuit (iii) Matched Load (iv) Unmatched Load. ~~8.~~ To study the properties of E-plane and H-plane Tea. Determine isolation and coupling coefficient	1. Determine the operating frequency of reflex klystron. 2. Draw the V-I characteristics of Reflex klystron 3. Draw the characteristics of attenuator 4. To verify the wave-guide law 5. To study the directivity and coupling coefficient of Directional Coupler. 6. To study the properties of magic Tea and also determine isolation and coupling coefficient. 7. To Measure the VSWR of (i) Short circuit (ii) Open circuit (iii) Matched Load (iv) Unmatched Load. 8. To study the properties of E-plane and H-plane Tea. Determine isolation and coupling coefficient	**Outcomes added.** **No Change in Experiment List**
24.	**Project**	After completion of this course, students will be able to: • Demonstrate effective project execution and control techniques that result in successful projects. • Ability to identify, formulates, and solves engineering problems. • Use the techniques, skills and modern engineering tools necessary for engineering practice.	**------**	**-----**	**Learning Outcomes Added and this course has no prescribed syllabus**
25.	**Antenna and Radar**	After completion of this course, students will be able to: • Recall electromagnetic plane waves. Apply principles of electromagnetic to explain antenna radiation. Explain	**~~Antenna and Radar~~** **Section A** Introduction to antennas, network theorems, directional properties of dipole antennas,travelling wave antenna& effect of point of feed on standing wave antenna, two element array, linear array, multiplication of patterns, effect of earth on vertical patterns, binomial array, antenna gain, effective area, antenna terminal impedance, ~~antenna as~~	**Antenna Analysis** **Section A** Introduction to antenna, Radiation Mechanism,Current Distribution on a Thin Wire Antenna Fundamental parameters of antenna: Radiation pattern, Radiation power density. Radiation intensity, Beamwidth, Directivity,Antenna efficiency, Gain, Beam efficiency, Bandwidth, Polarization, Input	Added Shifted ~~Deleted~~

		various antenna parameters. • Explain antenna as a point source. Design antenna patterns for different cases. • Explain dipole antennas. Establish mathematical equations for various parameters of thin linear antenna. • Explain loop, slot, patch and horn antennas. Derive expressions for the parameters of loop and slot antennas.	~~spread out transmission line, transmission loss between antenna~~	impedance, Antenna radiation efficiency, Antenna vector effective length, Maximum directivity and Maximum effective area, Friss transmission equation and radar range equation	
			Section B Practical antennas: Hertz and Marconi antenna, antenna losses, effect of antenna height, electrically short antennas, wave antenna, Medium and high frequency antenna, half wave dipole or dipole antenna, ~~harmonic,~~rhombic, V, inverted V, traveling wave antenna, loop antennas, folded dipole, yagi-uda, horn, ~~biconical,~~ helical~~, slot~~, ~~notch,~~frequency independent and microwave antennas, ~~Antenna measurements.~~	**Section B** Radiation Integrals and Auxiliary Potential Functions: The Vector Potential A for an Electric Current Source J, The Vector Potential F for a Magnetic Current Source M, Electric and Magnetic Fields for Electric (J) and Magnetic (M) Current Sources, Solution of the Inhomogeneous Vector Potential Wave Equation, Far-field radiation, Duality theorem, Reciprocity and Reaction theorem, Image Theory Linear wire antennas: Infinitesimal dipole, Small dipole, Region separation, Finite length dipole, Half-wave dipole Loop Antennas: Small circular loop, Square loop	Added Shifted ~~Deleted~~
			Section C ~~Radio wave propagation, phenomena and problems encountered in practice: effect of earth and atmosphere in radio waves. Physical principles & basic equations of radar, pulsed, continuous wave and pulsed Doppler radar, antenna systems, transmitters, detection theory, waveform considerations including pulse compression, principle of synthetic aperture radar, propagation clutter, and airborne radar~~	**Section C** Introduction to Arrays, two-element array, N-element linear array: uniform amplitude and spacing, directivity,N-element linear array: uniform spacing, non-uniform amplitude Traveling wave antennas: Long wire antenna, V-antenna, Rhombic antenna Broadband antennas: Helical antenna, Folded dipole, Yagi-uda array of linear elements Log-periodic antenna, Introduction to Horn antenna: E-plane sectoral horn, H-plane sectoral horn, Pyramidal horn	Added Shifted ~~Deleted~~

26.	**Antenna Analysis Lab**	After completion of this laboratory course, students will be able to: • Use HFSS tool to design and analysis of antennas. • Design various type of antennas • Measure and analyse radiation pattern of antennas.	**------**	1. To design dipole antenna in HFSS 2. Design monopole antenna in HFSS 3. Design horn antenna in HFSS 4. To measure radiation pattern of Horn Antenna 5. To measure radiation pattern of log periodic Antenna 6. To measure radiation pattern of micro strip patch Antenna **7.** To measure radiation pattern of YAGI-UDA Antenna.	**Addition of new Lab.**
27.	**VLSI Design**	After completion of this course, students will be able to: • Explain the basic theory of crystal growth, wafer fabrication and IC fabrication technology. • Explain the different VLSI design styles, overview of ICs and fabrication steps of MOS, CMOS and BJT.	**Section A** Recapitulation of basics, semiconductor devices, orientation effect, impurities, defects, Fabrication: Crystal growth & wafer preparation, Epitaxial growth, oxidation, photo-lithography, etching technology (wet & dry), Diffusion Fick's law, chemical vapor deposition, CVD reactors, ion implantation, metallization & patterning, photo resistive material, packaging.	—	**Course is shifted from 8th semester to 7th semester.** **No change in course contents.**
			Section B Overview of VLSI methodologies, VLSI design flow, type of ICs (monolithic, thick film, thin film, hybrid), Fabrication steps involve in, different type of resisters,	**----**	

		• Design and analyse the output characteristics of different MOS inverters • Design combinational and sequential circuit.	capacitor, diode, transistor (Darlington etc), JFET, MOSFET, isolation technique used in fabrication, fabrication of typical circuits.		
			Section C Digital CMOs circuit, MOS devices, V-I characteristics, Design & detailed analysis of MOS inverters (resistive load, enhancement load, depletion load, CMOS), delay & power analysis, Design layout of simple CMOS gates. Circuit implementation of combinational circuit, circuit implementation of sequential circuits - FFs, SRAM, DRAM.	--

(2013). *Instrumentation, Measurement and Analysis.* Tata McGraw Hill Publication	
45.	**Professional Ethics**		---	The course is intended to provide participants with the ability to analyze ethical situations, such as how they interact and what can be expected from them as correct ethical behaviour. In turn, any professional will benefit from a critical scrutiny of their own ethics by those from other professions. The general principles of professional ethics will be examined, as well as the distinctive problems of the different fields. The participant will also be expected to explain the pertaining issues, such as professional codes of ethics, confidentiality, obligations and Moral Values in Professional Ethics, the limits of predictability and responsibilities of the engineering profession, research misconduct, and work place rights & responsibilities. **Suggested e-resources:** 1. **Professional Ethics** by Rochester Institute of Technology, http://www.openculture.com/professional-ethics-a-free-online-course. 2. **Ethical Practice: Leading Through Professionalism, Social Responsibility, and System Design** by Prof. LeighHafrey, MIT, USA, https://ocw.mit.edu/courses/sloan-school-of-management/15-270-ethical-practice-	**New reading elective added**

				leading-through-professionalism-social-responsibility-and-system-design-spring-2016.	
46.	**IoT Sensors and Devices**		**-----**	This course is for practical learners who want to explore and interact with the IoT bridge between the cyber- and physical world. Student will learn about the 'things' that get connected in the Internet of Things to sense and interact with the real world environment – from something as simple as a smoke detector to a robotic arm in manufacturing. This course is about the devices that feel and the devices that respond. The course also describe about IoT sensors, actuators and intermediary devices that connect things to the internet, as well as electronics and systems, both of which underpin how the Internet of Things works and what it is designed to do. **Suggested e-resources:** 1. **IoT Sensors and Devices** by Curtin University https://www.edx.org/course/sensors-and-devices-in-the-iot. 2. **Internet of Things: Sensing and Actuation** by University of California San Diego https://www.coursera.org/learn/internet-of-things-sensing-actuation.	**New reading elective added**
47.	**Electromagnetic Compatibility**		**-----**	This course describe the systems that generate or consume electrical energy can produce electromagnetic noise that may interfere with the operation of the system itself and/or other systems. The course will enable students to understand how the principles of electricity and magnetism can be applied to design electrical and electronic systems that can co-exist harmoniously, that is, to design systems that are electromagnetically compatible with each other. The students will also be expected to explain how electromagnetic disturbances are generated in systems, how they couple to	**New reading elective added**

				other systems, and how systems can be protected. **Suggested e-resource:** 1. **Electromagnetic Compatibility** by Daniel Mansson, KTH Royal Institute of Technology, Sweden https://onlinecourses.nptel.ac.in/noc19_ee17/preview.	
48.	**Electric Vehicles**		**-----**	Electric vehicles are the future of transportation. Electric mobility has become an essential part of the energy transition, and will imply significant changes for vehicle manufacturers, governments, companies and individuals. This course prepare the students for product development positions in the automotive, communications, solar, wind turbine, and smart grid industries and service positions in the automotive industry. This course will be a first level course on electric vehicle. Students will be able to understand the operation of battery driven electric vehicle. The course will focus on areas that come under the umbrella of electric vehicles, such as vehicle dynamics, Motors, Power Electronics, Batteries, Charging and etc. Students will explore the most important aspects of this new market, including state-of-the-art technology of electric vehicles and charging infrastructure **Suggested e-resources:** 1. **Electric Vehicles Part 1** by IIT Delhi. https://onlinecourses.nptel.ac.in/noc19_ee18/preview. 2. **Electric Cars: Introduction** by Delft University of Technology (TU Delft). https://www.edx.org/course/electric-cars-introduction-0.	
49.	**Electronic Packaging**		**-----**	This course is designed to provide a basic knowledge of the technologies and processes required for the packaging of electronic products. The focus of the course will be on the mechanical, and materials aspects which are often neglected in the design phase with	**New reading elective added**

				potentially catastrophic consequences. Students will be expected to explore the underlying scientific and technological knowledge-based needed to become proficient builders and users of electronic systems. The students will also be able to explain the fundamental principles for packaging active and passive electronic devices; design of components, circuit boards, connectors, and assemblies; electromagnetic interference and its impact on packaging, thermal and mechanical design; and reliability assessment methods. **Suggested e-resource:** 1. **Electronics Packaging and Manufacturing** by IIT Kharagpur https://onlinecourses.nptel.ac.in/noc18_me54.	
50.	**Multimedia Compression and Communication**		**-----**	The purpose of this course is to understand the multimedia communication and compression. In this course students will be expected to explore various multimedia components and their characteristics, such as hardware, animation and graphics and able to explain the various audio and video compression techniques and apply these techniques in multimedia communication. The student will also be able to develop the understanding of network architecture, protocols, resource management, multimedia operating systems, scheduling and policing mechanisms. **Suggested e-resource:** **1. Multimedia Processing** by IIT Kharagpur. https://nptel.ac.in/syllabus/117105083/.	**New reading elective added**
51.	**Telecommunication switching systems and networks**		**-----**	The course is intended to develop the good understanding of the fundamentals and application of telecommunication networks i.e. PSTN, PDN and ISDN, modern digital telecommunication switching and networks. The participants will be expected to explain the recent terminology, like switching	**New reading elective added**

				systems, traffic management, time division switching systems, data communication Networks, routing, ISDN, voice data integration and importance of telephone traffic analysis and telephone networks.	
				Suggested e-resources: 1. **Computer Networks** by Department of CSE, IIT Kharagpur https://nptel.ac.in/courses/Webcoursecontents/IIT%20Kharagpur/Communication%20network/New index1.html. **2. Data Communication** by IIT Kharagpur. https://nptel.ac.in/courses/106105082/19.	

Annexure III

Name of Programme: Master of Science (Electronics)

Programme Educational Objectives: The M.Sc. (Electronics) programme aims for the holistic development of students through the unique and innovative fivefold educational ideology of Banasthali Vidyapith. Electronics now become the integral part of our lives. As the world continues to rely on Electronics technology, there is a great requirement for the technically skilled personnel who are able to design, create, and maintain the many products and systems that support electronics technology. Electronics professionals develop innovative technology solutions in a wide range of areas from handheld communications to solar panels; from cardiac pacemakers to autonomous robots; from wireless networks to bio-engineered sensors that detect dangerous pathogens; and intelligent surveillance systems that perform face and motion recognition.

The program aims to deepen the knowledge and skills of the students on the basic concepts and theories that will equip them in their professional work involving analysis, systems implementation, operation, production, and maintenance of the various applications in the field of Electronics. The curriculum is designed in a way that it will equip students with a solid grasp of mathematical, scientific, and engineering concepts, through classroom education and laboratory exercises. Graduates of the program are expected to develop and use professional skills that facilitate their continued carrier growth well beyond their graduation.

The main objectives of the program are:

- To provide students solid foundation in mathematics and electronics fundamentals required to solve subject related problems and also to pursue advanced studies. This serves them lifelong in their professional domain as well as higher education.
- To prepare professionals to work in inter-disciplinary environment, either independently or in a team, and demonstrate leadership qualities.
- Practice the ethics of their profession, consistent with a sense of social responsibility and develop their problem–solving skills and aptitude for innovations as they work individually and in multi-disciplinary teams.
- Inculcate a lifelong learning culture.
- To formulate problems and projects and to plan a process for solution.
- Communicate effectively and manage resources skilfully as members and leaders of the profession.

Programme Outcomes:

PO1. **Knowledge**: Apply the knowledge of mathematics, science and electronics fundamentals to the solution of related complex problems.

PO2. **Problem analysis:** Interpret, compare and analyze following rules of scientific methodology to arrive at a defensible conclusion of a problem.

PO3. **Design/development of solutions:** Develop solutions for complex electronics problems and design system components/processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. **Conduct investigations of complex problems:** Use scientific knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. **Modern tool usage:** Apply appropriate techniques, resources, and modern electronics tools including MATLAB, LabView, Proteus, VHDL, Arduino and related hardware to complex electronics activities with an understanding of the limitations.

PO6. **The electronics professional and society:** Apply reasoning gained by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional electronics practice.

PO7. **Environment and sustainability:** Understand the impact of the professional electronics solutions in societal and environmental contexts, and demonstrate the knowledge for sustainable development.

PO8. **Ethics:** Apply ethical principles and commit to professional ethics responsibilities and norms of the professional practice.

PO9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary surroundings.

PO10. Communication Skill: Communicate effectively on complex electronics activities with the electronics professional community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. Project management and finance: Demonstrate knowledge and understanding of the professional and management principles and apply as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Programme Scheme:

M.Sc. (Electronics) I Sem (December 2019)

1. **Highlighted with gray shade indicates the changed subject/course/credit/modification in syllabus/ new course added.**
2. **Text in white color with black background indicates swapping of course.**

ELE 507P	UIL Project	0	0	48	24
	Reading Elective	0	0	0	2
	Semester Wise Total	0	0	48	26

Discipline Electives		
Basics of Nanoelectronics	Biomedical Instrumentation	Optical Network
Mechatronics	Fiber Optics and Communication	Satellite Communication
Audio and Video Systems	Analytical Instrumentation	Mobile Communication
Geoinformatics	Digital Signal Processing	Radar Navigation
Robotics and Automation	Communication Networks	
Antenna Analysis	Power Electronics	

Reading Electives		
Professional Ethics	Telecommunication switching systems and networks	Electric Vehicles
Electromagnetic Compatibility	Multimedia Compression and Communication	
IoT Sensors and Devices	Electronic Packaging	

Student can opt for at most 2 additional Open (Generic) audit/ credit Elective from other disciplines opting at most 1 per semester in Semesters II, & III with prior permission of respective heads, time table permitting.

S. No.	Course List	Learning Outcome	Existing Syllabus	Suggested Syllabus	Remarks
1.	~~**CS 416, Computer Programming**~~	----	**----**	CS 415, Computer Programming	**Please refer from Department of Computer Science**
2	**Analog Integrated Circuits**	After the completion of course student will be able to: • Explain the operation and properties of Op-amp. • Explain the design of differential amplifiers, active filters, oscillators, and other linear and non-linear circuits using linear integrated circuits. • Design and analysis of single stage, multistage amplifiers and high frequency amplifiers.	~~**Analog Integrated Circuits**~~ **Section A** ~~**Feedback Amplifiers:** classifications of amplifiers, general feedback structure, properties of negative feedback, feedback topologies, Transfer gain with feedback, General Characteristics of negative feedback amplifiers, input resistance, output resistance. Method of analysis, voltage series and current series feedback, current shunt and voltage shunt feedback.~~ ~~**Power amplifiers:** classification, operation, analysis and design of Class A, Class B, Class AB, Class C, power dissipation and efficiency calculations, amplifier distortion.~~	**Analog Electronics** **Section A** Operational Amplifier and its applications: BJT differential amplifier: DC and AC analysis, Transfer characteristics, Differential and Common mode gain, Ideal Op-amp, inverting and non-inverting amplifier, offset voltage, offset current, bias current, frequency response, slew rate, CMRR, summing amplifier, differential and instrumentation amplifier, design of integrator and differentiator, logarithmic and anti-logarithmic amplifiers, Active filters.	Added Shifted ~~Deleted~~
			Section B **High Frequency Amplifiers :** Hybrid-pi CE transistor model, Hybrid-pi Conductance, Hybrid-pi Capacitances, CE short circuit current gain, current gain with resistive load, single stage CE transistor amplifier response, gain-bandwidth product, **Multistage Amplifiers :** frequency response, Effect of Cascading on bandwidth, RC Coupled amplifier, Low frequency response of an RC coupled stage, Effect of emitter bypass capacitor, High frequency response of two cascaded CE transistor stages, Multistage CE amplifier cascaded at high frequencies.	**Section B** Op-amp RC oscillator circuits: Wien bridge, Phase shift; square wave & triangular wave generator, voltage controlled oscillator, Phase locked loops: performance factors, Integrated circuit PLL (565) and its applications, Precision rectifier, comparator, Schmitt trigger and 555 IC Timer, Voltage Regulators: Voltage regulator basics, OP-AMP series voltage regulators, adjustable voltage regulators, short circuit protection and fold back current limiting circuits, IC voltage regulators , switching regulators.	Added Shifted ~~Deleted~~
			Section C **Operational amplifier & its Applications:** BJT Differential Amplifier: DC and AC	**Section C** High frequency amplifiers: Hybrid –pi CE transistor model, Hybrid –pi conductance,	Added Shifted ~~Deleted~~

			analysis, transfer characteristics, differential and common modes gain. ideal op-amp, inverting and non-inverting amplifier, offset voltage, offset current, bias current, slew rate, CMMR, design of Integrator and differentiator, summing amplifiers, differential and instrumentation amplifiers, Active filters, OP-AMP RC Oscillator circuits : Wien-Bridge, Phase-Shift, Precision rectifier, comparator, Schmitt trigger, 555 IC timer.	Hybrid –pi capacitances, CE short circuit current gain, Current gain with resistive load, Single stage CE transistor amplifier response, Gain bandwidth product. Multistage Amplifier: Frequency response, Effect of cascading on bandwidth, RC coupled amplifier; Low frequency response of an RC coupled stage, Effect of emitter bypass capacitor.	
			Text Books: 1. Millman and Halkias : Integrated electronics, TMH, 1991. 2. ~~Boylestad, Nashelshy, **Electronic Devices and Circuit Theory,** Pearson publication, Tenth Edition, 2009.~~ 3. 5.	**ELE 406L, Principles of Digital Electronics Lab**	After completion of this laboratory course, students will be able to: • Understand the basic digital circuits and to verify their operation.	——	——	**Learning Outcomes added** **No change in**

		• Explain the elements of digital system abstractions such as digital representations of information, digital logic, Boolean algebra, state elements and finite state machine (FSMs). • Create a gate-level implementation of a combinational and sequential logic functions described by a truth table using and/or/inv gates, multiplexers.			**experiment list.**
6	**ECE 201, Signals, Systems and Networks**	After the completion of course student will be able to: • Analyze linear time invariant system in time and frequency domain • Apply network theorem to analyze the electrical circuit. • Explain two port parameters.	--	**Section-A** Introduction: Continuous and discrete time signals, Transformation of independent variables, Exponential and sinusoidal signals, Unit impulse and unit step functions, Continuous and discrete time systems, Basic system properties Linear Time-Invariant System: Convolution for continuous and discrete time LTI system, Properties of LTI system, Causal LTI systems described by differential and difference equations, Singularity functions Fourier Series: Fourier series representation of continuous time periodic signals, Convergence of Fourier series, Properties of continuous time Fourier series, Fourier series representation of discrete time periodic signals, Properties of discrete time Fourier series	**Introduced New Course**
			--	**Section-B** Continuous Time Fourier Transform:	

				Representation of a periodic signals, Fourier transform for periodic signals, Properties of continuous time Fourier Transform, Systems characterized by constant coefficient differential equations Laplace Transform: Laplace transform, Region of convergence for Laplace transform, Inverse Laplace transform, Geometrical evaluation of Fourier Transform from pole-zero plot, Properties of Laplace transform, Analysis and characterization of LTI systems using Laplace transform Initial Conditions in Networks: First order differential equations- General and Particular solutions, Time constants, Initial conditions in elements, geometrical interpretation of derivatives, A procedure to evaluate initial conditions	
			----	**Section- C** Differential equation in circuits: Second order equations-Internal excitations, Networks excited by external energy sources, Response as related to the s-plane location of roots, General solutions in Terms of S, Q, ω_n Impedance Functions and Networks Theorems: The concept of complex frequency, Transform impedance and transform circuits, Series and parallel combinations of elements, Superposition and Reciprocity, Thevenin's Theorem and Norton's Theorem Two port Parameters: Relationship of two port variables, Short circuit admittance parameters, Open circuit impedance parameters, Transmission parameters, Hybrid parameters, Relation between parameter sets, Parallel connection of two port networks	

			---	**Recommended Books:** 1. Oppenheim A. V., A. V. &Nawab S. H. (2015). *Signal and Systems (2/e)*, Boston: Pearson Publication 2. Valkenburg M.E. Van (2015). *Network Analysis (3/e)*. New Delhi: Pearson Publication 3. Proakis J. G. &Manolakis D. G. (2007). *Digital Signal Processing: Principles, Algorithms, and Applications (4/e)*. New Delhi: Pearson Publication 4. Kuo F. F. (2010). *Network Analysis and Synthesis (2/e)*. New Delhi: John Wiley & Sons Publication **Suggested E-resources:** 1. **Circuit Theory** by Prof. S.C. Dutta Roy, Department of Electrical Engineering, Indian Institute of Technology, Delhi. https://nptel.ac.in/courses/108102042/ 2. **Principles of Signals and Systems** by Prof. Aditya K. Jagannatham, Department of Electrical Engineering Indian Institute of Technology, Kanpur. https://nptel.ac.in/courses/108104100	
7	**Microwave Electronics**	After the completion of course student will be able to: • Understand various parameters of waveguide and use of component as per applications • Design impedance matching network for any transmission line or system	~~**Microwave Electronics**~~ **Section A** Introduction to Microwaves & its application, Transmission lines: General equation, input impedance, characteristic impedance, reflection and transmission coefficient, standing wave ratio, resonant and anti resonant line impedance matching, ~~smith chart and its applications~~, coaxial, ~~twin~~, strip &microstrip lines &baluns	**Microwave Engineering** **Section A** Introduction to Microwaves & its application, Microwave Electromagnetic spectrum, Transmission Lines: General equation, input impedance, characteristic impedance, reflection and transmission coefficient, standing wave ratio, resonant and anti-resonant line impedance matching, Matching techniques: single stub, double stub using smith chart, quarter wave transformer,baluns, coaxial transmission line, Planar transmission line:	Added Shifted ~~Deleted~~

		• Analyse and find applications and limitations of microwave tube Generators and Amplifiers		Strip line, Microstrip line, Slot line etc.	
			Section B Wave Guides: Wave propagation in rectangular & circular wave guides, wave guide modes~~, Q of wave guide~~, Wave guide coupling, Microwave passive components: S-parameter representation and analysis of microwave components such as Waveguide Tees, Two-hole directional coupler, attenuators, Phase shifters, Rectangular cavity resonator, Isolators, Circulators.	**Section B** Wave Guides: Wave propagation in rectangular wave guide: solution of TE and TM modes, Power Transmission and Attenuation, Excitation of modes in Rectangular waveguide, Circular Waveguide: Basic idea of TE and TM modes, Rectangular and Circular cavity resonators, Rectangular cavity resonators, Q of cavity resonators, S parameters and its conversion with Z and Y parameters, Wave guide coupling, Microwave passive Components: S- parameter representation and analysis of microwave components such as Waveguide Tees, Two-hole directional coupler, attenuators, Phase shifters, Microwave propagation in ferrites: Faraday rotation, Isolators, Circulators.	Added Shifted ~~Deleted~~
			Section C Microwave Tube Devices: Conventional Vacuum tubes at microwave, O type device - Klystron (two cavity & reflex). M type device magnetron, Introduction to TWT (Traveling Wave Tubes). Microwave Semiconductor Devices IMPATT, TRAPATT& Gunn Devices.	**Section C** Microwave Tubes: Limitations of Conventional vacuum tubes at microwave, Klystron: Construction and operation of two cavity and multi-cavity klystrons, Applegate Diagram and application of two cavity klystron, Construction and working of Reflex klystron, Magnetron: Types of magnetron, Construction, Operation and Analysis of cavity or travelling wave magnetron, Traveling wave tubes (TWT): Construction, Operation and practical consideration of helical type TWT, Applications of TWT, Microwave Semiconductor Devices: Tunnel diodes, principle of operation and application of tunnel diodes, Transferred Electron devices: Gunn-Effect diodes, Two-valley theory, Mode of operations of Gunn diode, Avalanche Transit-Time devices:	Added Shifted ~~Deleted~~

				IMPATT, TRAPATT.	
			Text Books: 1. Sisodia-Raghuvanshi: **Microwave Circuits & Passive Devices:** (Wiley-eastern).1st edition.1987 2. S.Y. Liao: **Microwave Devices & Circuits**, (Prentice Hall).1st Edition 1995, 3. Collins: **Foundation Of Microwave Engineering**, (Mc Graw Hill) 2nd Edition 1992 4. P.A. Rizzi: **Microwave:** (Prentice Hall). 1st Edition 1998	**Recommended Books:** 1. Liao, S.Y. (1995). *Microwave devices & Circuits*. New Delhi: Prentice Hall Publication. 2. Rizzi, P.A. (1998). *Microwave Engineering*. New Delhi: Prentice Hall Publication. 3. Collins, R. E. (1992). *Foundation of Microwave Engineering*. New Delhi: McGraw Hill Publication. 4. Pozar, David M. (2008). *Microwave Engineering*. Waves** by Prof. R. K. Shivgaonkar, Indian Institute of Technology, Bombay. https://nptel.ac.in/courses/117101056/	
8	**Microwave Electronics Lab**	After completion of this laboratory course, students will be able to: • Understand the concept and working of microwave bench and different components connected on a bench. • Analyze the behaviour of various microwave components.	~~**Microwave Electronics Lab**~~ 1. Determine the operating frequency of reflex klystron. 2. Draw the V-I characteristics of Reflex klystron 3. Draw the characteristics of attenuator 4. To verify the wave-guide law 5. To study the directivity and coupling coefficient of Directional Coupler. 6. To study the properties of magic Tea and also determine isolation and coupling coefficient.	**Microwave Engineering Lab** 1. Determine the operating frequency of reflex klystron. 2. Draw the V-I characteristics of Reflex klystron 3. Draw the characteristics of attenuator 4. To verify the wave-guide law 5. To study the directivity and coupling coefficient of Directional Coupler. 6. To study the properties of magic Tea and also determine isolation and coupling coefficient.	**Learning Outcomes added.** **No Change in Experiment List.**

		• Verify properties/ characteristic of microwave source, tees and directional coupler.	7. To Measure the VSWR of (i) Short circuit (ii) Open circuit (iii) Matched Load (iv) Unmatched Load. 8. To study the properties of E-plane and H-plane Tea. Determine isolation and coupling coefficient	7. To Measure the VSWR of (i) Short circuit (ii) Open circuit (iii) Matched Load (iv) Unmatched Load. 8. To study the properties of E-plane and H-plane Tea. Determine isolation and coupling coefficient	
9	**EIE 201, Electronics Measurement and Instrumentation**	After the completion of course student will be able to: • Measure various electrical parameters with precision and accuracy. • Select appropriate transducers for measurement of physical parameter. • Use suitable AC Bridge for relevant parameter measurement.	**~~EIE 201, Electronics Measurement and Instrumentation~~** **Section A** Measurements, Elements of Measurements, Mathematical Models of Measurements system, Performance Characteristics, Error in Measurement, True value, static error, static correction, scale range, scale spam, Reproducibility & drift, Repeatability, ~~Noise-Signal to noise ratio, source of noise, Johnson noise, noise factor & noise figure.~~ Accuracy & precision, Indication of precision, Significant figures, Range of doubt, static sensitivity, linearity, Hysteresis, Threshold, dead time, dead zone, resolution & discrimination, measurement error type & analysis, standard & calibration, curve fitting.	**Electrical and Electronics Measurements** **Section A** Measurements: Elements of Measurements, Performance characteristics, Error in measurements, True value, Static error, Static correction, Scale range, Scale span, Reproducibility, Drift, Repeatability, Accuracy and Precision, Indication of Precision, Significant figures, Range of doubt, Static sensitivity, Linearity, Hysteresis, Threshold, Dead Time, Dead zone, Resolution and Discrimination. Measurement error: Types and analysis, Loading error due to series and shunt connected instruments, Standards and Calibration, Curve fitting, Dynamic characteristics of measurement systems, Mathematical models of measurement system (Mechanical and Electrical System). Transducers: Classification and characteristics, Resistive, Capacitive, Inductive, Hall Effect. Measurement of Displacement: LVDT and RVDT, Strain Gauges and its types. Measurement of Temperature: RTD, Thermistor and Thermocouples.	**Added** **Shifted** **~~Deleted~~**
			SECTION B Transducers: Classification, resistive, capacitive, inductive, ~~Piezoelectric,~~	**Section B** d'Arsonval Galvanometer- Construction, Torque Equation and Dynamic behavior of	**Added** **Shifted**

			~~thermoelectric,~~ ~~photoelectric,~~ Hall Effect. Measurements of displacement- linear & rotational (LVDT&RVDT), Strain gauge, Types of Strain gauge. ~~Measurement of Velocity- Linear & Angular.~~ Measurement of Temperature- RTD, Thermistor, thermocouple, ~~Pyrometer-Radiation & optical, Platinum- Resistance- thermometer. Measurement of flow- Electromagnetic & ultrasonic type. Measurement of Liquid- Gamma rays, ultrasonic type. Measurement of Humidity- Hydrometer, Measurement of P_H - P_H electrode,~~ Measurement of Phase &Frequency- Lissouge Pattern.	galvanometers. PMMC Instrument- Construction, Torque equation, Ammeter shunts, Voltmeter multipliers. Ohmmeter- Series and Shunt type, Moving Iron Instruments, Electrodynamometer Instrument. AC Bridges- Measurement of self-inductance (Maxwell's Bridge, Hay's Bridge, Owen's Bridge, Anderson's Bridge), capacitance (De Sauty's and Schering Bridge) and frequency (Wien's Bridge).	**~~Deleted~~**
			SECTION C AC Bridges- Measurement of self-inductance, capacitance & Frequency, Measuring Instruments: ~~Construction of Ballistic Galvanometer,~~ PMMC instruments- Construction & Torque equation, Moving Iron- Construction & Torque equation, ~~DC & AC voltmeters, DC & AC ammeters~~, ohmmeters-series & Shunt type, Multimeter- Digital & Analog, Cathode Ray Oscilloscope- CRT, ~~Electron Gun, Focusing, Deflection~~, Time base Generator, Types of CRO, Function generator, Q- meter, ~~Energy meter~~.	**Section C** Measurement of low, medium and high resistance. Multimeter- Analog and Digital, Function generator, Wave Analyzer, Spectrum Analyzer, Q-meter and its applications, CRO- CRT, Time base generator, Measurement of Phase and Frequency (Lissajous Patterns), types of CRO (Dual Trace, Dual Beam, Sampling type and Storage CRO).	**Added** **Shifted** **~~Deleted~~**
			Text Books: 1. Sawhney, A.K.: **A Text Book on Electrical and Electronics measurements and Instrumentation:**Dhanpat Rai & Sons, 4^{th} edition 1968. 27	**Satellite Communication**	After the completion of course student will be able to: • Identify the fundamentals of orbital mechanics, the characteristics of common orbits used by communications and other satellites, and be able to discuss launch methods and technologies. • Understand the systems required by a communications satellite to function and the trade-offs and limitations encountered in the design of a	---- ----	**Section A** Elements of Satellite Communication, Orbital mechanics, look angle and orbit determination, launches & launch vehicle, orbital effects, Geostationary Orbit, Satellite subsystems, attitude and orbit control systems, TTC&M, communication subsystem, satellite antenna, satellite link design: basic transmission theory, system noise temperature and G/T ratio, downlink design, uplink design, satellite systems using small earth station, design for specified C/N. **Section B** Modulation and multiplexing techniques for satellite links: FM, pre-emphasis and de-emphasis, S/N ratios for FM video transmission, digital transmission, digital modulation and demodulation, TDM. Multiple access: FDMA, TDMA, DAMA	**Addition of New Course as Elective**

		communications satellite system. • Understand different Networks topologies and applications of networks, as well as the comparison to alternative communications systems.		and CDMA.	
			---	**Section C** Error control for digital satellite links: error detection and correction, channel capacity, error control coding, convolutional codes, linear and cyclic block codes. Propagation effects and their impact on satellite-earth links: attenuation and depolarization, atmospheric absorption, rain, cloud and ice effects etc. Introduction of various satellite systems: VSAT, low earth orbit and non-geostationary, direct broadcast satellite television and radio, satellite navigation and the global positioning systems.	
			---	**Recommended Books:** 1. Bostian,Charles., Pratt, Timothy., & Allnutt, Jeremy. (2006). *Satellite Communications***.** New Delhi: John Wiley & Sons. 2. Roddy, Dennis. (2017). *Satellite Communications***.** New Delhi: McGraw-Hill Publication 3. Ha, Tri. T. (1990). *Digital Satellite Communications.* New Delhi: McGraw-Hill Publication **Suggested e-resources:** 1. **Satellite Communication Systems** by Prof.Kalyan Kumar Bandyopadhyay Department of Electronics and Electrical Communication Engineering Indian Institute of Technology, Kharagpur. http://textofvideo.nptel.ac.in/117105131/lec1.pdf 2. **Satellite Link Design** by Dr. Marwah Ahmed. https://net425site.files.wordpress.com/2017/02/net-425-d-feb-2016-lec-5.pdf	

28	**Basics of Nanoelectronics**	After the completion of course student will be able to: • Explain the fundamental science and quantum mechanics behind nanoelectronics. • Explain the basic concepts behind the operation of nano scale MOSFET • describe the various techniques and approaches for the fabrication of nano-scale devices	---	**Section A** The 'Top down' and 'Bottom up' approach, Nanotechnology potential, introductory quantum mechanics for Nanoscience: size effect in smaller systems, quantum behavior of nanometric world, Band structure and density of states at Nanoscale: energy bands, density of states at low dimensional structure. Semiconductor heterostructure quantum wells, quantum wires, and quantum dots.	**Addition of New Course as Elective**
			--	**Section B** MOS band structure, CMOS Scaling, The nanoscale MOSFET, Finfets, Vertical MOSFETs, limits to scaling, Tunnel junction and application of tunneling: Tunneling through a potential barrier, potential energy profiles of material interfaces,Classical and semi-classical transport, ballistic transport, carbon nanotubes,Single electron transistor, Coulomb Blockade, Resonant Tunneling diodes and transistors.	
			---	**Section C** Buck minsterfullerence, Nanodiomond, Molecular Machine, Nanobiometrics. **Fabrication technology**: Top-down vs. bottom-up technology. **Lithographic process**: Lithography, Nanolithography, split gate technology, self-assembly, limitation of lithographic process. **Non-lithographic techniques:** Plasma arc discharge, sputtering, evaporation, chemical vapour deposition, pulsed laser deposition, molecular beam epitaxy, sol-gel technique, electro deposition and other process.	
			---	**Recommended Books:** 1. Hanson, G. W. (2008). *Fundamentals*	

				of Nanoelectronics. New Delhi: Pearson Publication. 2. Chattopadhyay ,K. K.,& Banerjee, A. N. (2009). *Introduction to Nanoscience and Nanotechnology*. New Delhi: PHI Publication. 3. Mitin, Vlaadiniz.U. (2009). *Introduction to Nanoelectronics*. New Delhi: Cambridge University Press. 4. Dragman,M., &Dragman,D. (2008). *Nanoelectronics- Principles and Devices (2/e)*: Artech House Publishers 5. Goser, Karl. (2004). *Nanoelectronics and Nanosystems*. Berlin: Springer Publication 6. Minoli, Daniel. (2005). *Nanotechnology Application to Telecommunication and Networking*. Hoboken, New Jersey: Wiley Publication. 7. Davis ,John. H. (1997). *Physics of Low Dimension Semiconductor*. New Delhi: Cambridge University Press. 8. Cosh, Carl.C. (1998). *Nanostructure Materials Processing Property and Applications*. Norwich, New York: Noyes Publications	
29	**Mobile Communication**	After the completion of course student will be able to: • To understand the various generations of mobile communications and basics of wireless communication • To understand the concept of cellular communication • Can conduct field	----	**Section A** Introduction to Wireless Communication System: Evolution of mobile radio communication, Mobile radiotelephony in U.S Mobile radio system around the world, second generation (2G) cellular network, evolution to 2 5G wireless network evolution for 2.5G TDMA standards, third generation (3G) wireless network. The Cellular concept- System design fundamentals, frequency reuse channel, assignment strategies. Hand off strategies Interference and system capacity,	**Addition of New Course as Elective**

		experiments and measurements		improving coverage and capacity in cellular system.	
			----	**Section B** Propagation model and Spread Spectrum Modulation Techniques: Longley rice model, kumara model hata model pcs extension to hata model, wolfish and betony model, Pseudo Noise (PN) sequence,. Direct sequence spread spectrum (DSSS), frequency hopped spread spectrum (FHSS). Multiple Access Techniques for Wireless Communication, Introduction to multiple access. Frequency division multiple access (FDMA) Time division Multiple access (TDMA).	
			----	**Section C** Spread spectrum multiple access. Packet Radio. Global System for Mobile Communication, channel types, Example of a GSM cell. Frame structure of GSM, Data over low power wireless Re-cordless Network.	
			----	**Recommended Books:** 1. Rappaport,Theodre. S. (2014) *Wireless Communication***.** New Delhi: Pearson Publication. 2. Pandya, Raj. (1999). *Mobile and Personal Communication System and Services***:** New Delhi: PHI Publication. 3. Goddman, David.J. (1997). *GSM cellular Radio***:** New Delhi: John Wiley Publication **Suggested E-Resources:** 1.**Wireless Communications** by Prof.Dr.Ranjan Bose, Department of Electrical Engineering, IIT Delhi.	

				https://nptel.ac.in/courses/117102062/	
30	**Radar Navigation**	After the completion of course student will be able to: • Understand the basic concept of Radar and applications of various types. • Understand the different Radar Performance factors. • Explain the operation of CW& FM Radar.	----	**Section A** RADAR SIGNAL MODELS: Amplitude models, distributed target forms of range equation, radar cross section, statistical description of radar cross section, Swerling model, Clutter, signal to clutter ratio, temporal and spatial correlation of clutter, noise model and signal to noise ratio, frequency models, Doppler shift, simplifies approach to Doppler shift, stop and hop assumption, spatial model, variation with angle, variation with range, projections, multipath, spectral models. RADAR WAVE FORMS: Waveform matched filter of moving targets, ambiguity function, ambiguity function of the simple matched pulse filter for the pulse burst, pulse by pulse processing, range ambiguity, Doppler response and ambiguity function of the pulse burst.	**Addition of New Course as Elective**
			----	**Section B** DETECTION FUNDAMENTALS: Radar detection as hypothesis testing, Neyman-Pearson detection rule, likelihood ratio test, threshold detection of radar signals, non-coherent integration of nonfluctuating targets, Albersheim and Shnidaman equations, Binary integration. RADIO DIRECTION FINDING: loop direction finder, goniometer, errors in direction finding, adcock and automatic direction finders, commutated aerial direction finder. RADIO RANGES: LF/MF four course radio range, VOR, ground equipment & receiver, VOR errors. HYBERBOLIC SYSTEM OF NAVIGATION: LORAN Decca & Omega system.DME&TECAN.	

			---	**Section C** AIDS TO APPROACH AND LANDING: ILS, GCA& MLS DOPPLER NAVIGATION: Beam configuration, doppler frequency equation, track stabilisation and doppler spectrum, components of doppler navigation system, doppler radar equipment, CW &FMCW Doppler radar, frequency trackers, doppler range equation. SATALLITE NAVIGATION SYSTEM: transit system, NAVSTAR, GPS, basic principles of operation, signal structure of NAVSTAR broadcasts, data message, velocity determination, accuracy of GPS & differential navigation, NAVSTAR receiver.	
			---	**Recommended Books:** 1. Richards, Mark. A (2014). *Fundamentals of Radar Signal Processing*. New Delhi:TMH Publication. 2. Nagraja, N. S. (2009). *Elements of Electronics Navigation*: New Delhi:TMH Publication. 3. Peebles Jr. P. Z. (1998). *Radar Principles*. New Delhi: Wiley Publication. **Suggested E-Resources:** **1. Introduction to Radar Systems** by Dr. Robert O'Donnell, Massachusetts Institute of Technology. https://ocw.mit.edu/resources/res-ll-001-introduction-to-radar-systems-spring-2007	
31	**Mechatronics**	After successful completion of the course, student will be able to:		**SECTION A** **Mechatronics and its scope**: Basic Structure and Evolution	**Addition of new elective.**

		• Develop skills to monitor and control real world industrial systems • Implement projects for industrial and home automations • Analyze and create own innovative filters and signal conditioning applications • Perform computer based controlling of industries using PLC, SCADA and HMI		**Introduction of Transducer & Sensor:** Displacement, Pressure, Flow, Level and Temperature Measurements. Signal conditioning: amplification, filtering **PC based Control:** Smart Sensor, Data Acquisition System, PLC, SCADA, DCS and HMI System.	
				SECTION B **Pneumatic and Hydraulic actuation systems:** Directional control valves, Pressure control valves and Process control valves and cylinders. **Mechanical actuation system**- Kinematic chains, cams, gear-trains, Ratchet & Pawl, dampers, Bearings. **Electrical actuation system:** Mechanical switches- solenoid operated solid state switches, DC, AC & stepper motors. **Electrical Drives:** Conventional and Modern electrical drives, Classifications and Applications Closed loop Controllers: Performance Specifications, Delayed First and Second order system, PID Controller, ZN Tuning.	
				SECTION C **Case Studies of Mechatronics Systems:** Industrial Robot, Automobile Engine Control, Vehicle Suspension Control, MEMS, CNC Machine, Gyro system, 3-D Printer.	
				Recommended Books: 1. Isermann**,** Rolf (2005). *Mechatronics Systems*. Springer Publication 2. Bolton, W. (2003). *Mechatronics: electronic control systems in mechanical and electrical engineering*. Pearson Education. 3. Sawhney A.K. (2015). *A Course in Electrical and Electronic*	

				Measurements and Instrumentation. Dhanpat Rai & Co Publication 4. Nakra B.C. & Chaudhry K.K. (2013). *Instrumentation, Measurement and Analysis.* Tata McGraw Hill Publication	
32	**Fiber Optics and Communication**	After the completion of course student will be able to: • Explain the light propagation through optical fibers. • Explain the various light sources and optical detectors. • Design fiber optic transmitter and receiver system.	**Section A** **Fiber optics:** Introduction, optical fibers - geometrical Optics description, wave propagation, fiber modes, step index, graded index single and multimode fibers, dispersion, limitation on bit rate, fiber bandwidth, fiber loss, fiber manufacturing: design issue, fabrication methods, cables and connectors, fiber splicing and fiber couplers.	-----	**Move this course from 2nd semester to list of Elective** **No change in course contents.**
			Section B **Optical Sources and detectors:** Light-Emitting diodes: LED characteristics, modulation response, LED structures. Semiconductor Lasers: structures, Laser characteristics, single longitude mode operation, DFB and VCSEL laser, Receivers: photo detector design: P-N, PIN, Schottky barrier and Avalanche photodiode, Phototransistor, receiver noise: noise mechanisms in PIN and APD receivers, Receiver structures.	-----	
			Section C **Optical Fiber Systems:** optical transmitter circuit: source limitations, LED and Laser drive circuits, Optical receiver circuit, system design considerations, Digital systems, Digital optical receiver, BER, Optical power budgeting, rise time budget, line coding, analog systems: Direct intensity modulation, subcarrier intensity modulation, coherent systems, computer, sensor and military applications.	-----	

			Text Books: 1. Govind P. Agarwal: **Fiber-Optic Communication Systems:** Wiley India, 3rd Ed.2007. 2. John M. Senior: **Optical Fiber communication:** PHI. **References:** 1. D.C. Agrawal: **Fiber Optic Communication**: Wheeler Pub.2nd ed., 1993. 2. Gowar: **Optical Fiber Communication:** PHI, 1995. 3. Pallab Bhattacharya: **Semiconductor Optoelectronics Devices:** PHI 2nd ed., 2002. 4. Gerd Keiser: **Optical Fiber communication:** McGraw Hill, 2nd ed., 1991.	**Recommended Books:** 1. Audio *and Video Systems***.** New Delhi: Dhanpat Rai & Co. 3. Gupta, R.G. (2010). *Audio and Video Systems: Principles, Maintenance and Troubleshooting***.** New Delhi: Tata Mc-Graw Hill **Suggested e-resources:** 1. **Digital Video Signal Processing** by Prof.Sumana Gupta, Department of Electrical Engineering, IIT Kanpur. https://nptel.ac.in/courses/117104020/1 2. **Audio System Engineering** by Prof.Shyamal Kumar Das Mandal, Department of Electronics and Communication Engineering, Indian Institute of Technology, Kharagpur. https://nptel.ac.in/courses/117105133/22	
35	**Digital Signal Processing**	After the completion of course student will be able to: • Students will be familiar with the most important methods in DSP. • Students will be familiar with design and functioning of digital filter design • Student will be able to transform-domain processing.	**Section A** Introduction of Signals, Systems and Signal Processing, Classification of Signals and Systems, Advantages of digital over analog Signal processing, Signal Models - Continuous Time versus Discrete time signals, Periodic and aperiodic Signals, Phasor Signals and Spectra, Energy and Power Signals, System Modeling Concepts, The superposition integral for Fixed and Linear Systems, Impulse Response of a Fixed and Linear System - Fourier Series - Trigonometric Series- Exponential Fourier Series-Symmetry Properties of the Fourier Coefficients. Fourier Integral, Energy Spectral Density, Fourier Transforms in	**----**	**Move this course from 2nd semester to list of Elective** **No change in course contents.**

			the Limit, Fourier Transform Theorems and Pairs, System Analysis with Fourier Transform, Lap lace Transform Theorems, Network Analysis using the Lap lace Transform.		
			Section B Discrete Time Signals and Systems - Review of Sampled Data Systems, Time Domain Representations of Discrete Time Signals, Frequency Domain Representation of Discrete Time Signals, Discrete Time Signals obtained by sampling, Discrete Fourier Transform. Z-Transform - Definition and Examples, Inverse Z-Transform, Properties of the Z-Transform, Introduction to Realization of Digital Systems - Block Diagrams and Signal Flow Graphs. Introduction to Realization of an IIR and FIR systems, Discrete Fourier Transforms (DFT) and Fast Fourier Transform (FFT).	----	
			Section C Design of Digital Filters: Introduction to Filters, A comparison of IIR and FIR Digital Filters. Design of IIR Digital Filters –Impulse Invariant Transformation, Bilinear Transformation, Design of Digital Butter worth and Chebyshev Filters. Design of FIR Digital Filters - Windowing and Rectangular Window, Filter Designs using Windows, Frequency Sampling Technique. DSP tools and DSP techniques in various applications.		
			Text Books: 1. Johnson Johnny R.: **Introduction to Signal Processin:** Prentice-Hall of India, 1998. 2. Oppenheim V. Alan: **Signal & Systems:** Prentice-Hall of India, 1995.	**Recommended Books:** 1. Johnson, Johnny. R. (1998). **Introduction to Signal Processing**. New Delhi: phi Publication. 2. Oppenheim, V. Alan. (1995). **Signal & Systems**. New Delhi: PHI Publication.	

			3. ProakisG.John: **Digital Signal Processing:** Prentice-Hall of India, 3rd edition, 2002.	3. Proakis, G.John. Dutta Roy, Department of Electrical Engineering Indian Institute of Technology, Delhi. https://nptel.ac.in/courses/117102060/	
36	**Geoinformatics**	After the completion of course student will be able to: • Describe spatial database, Co-ordinate and projection system • Analyse vector and raster based analysis in Geographical Information Sciences • Describe different types of satellite system and digital image processing	----	**Section A** Geographical Information System: Definition, Components of GIS, Hardware and software requirements for GIS, Coordinate system and projections, Database structure and formats, Spatial data models - raster and vector. Data inputting, Data base design - editing and topology creation. Linkage between spatial and Non spatial data, Query (Attribute/Spatial), Vector based analysis. Raster based analysis. Errors, Digital Elevation Model, Network analysis, Open source and WebGIS.	**Addition of New Course as Elective**
			-----	**Section B** Remote Sensing: Definition - components of remote sensing - energy sensor, interacting body; Type - active and passive remote sensing. Satellite System - meteorological, communication and remote sensing. Platforms - aerial and space, synoptivity and repeativity. Electromagnetic Radiation (EMR) - EMR spectrum- visible, infrared [IR) middle IR, thermal IR and microwave. EMR interaction with earth surface material, radiance, irradiance, incident, reflected, absorbed and transmitted energy, spectral	

				response pattern - spectral signature curves (water, soil and vegetation]. Digital Image Processing: Digital Image, Satellite Image - characteristics and formats. Resolution - spatial, spectral, radiometric and temporal; Introduction to rectification, enhancement; Classification - Unsupervised and Supervised classification.	
			----	**Section C** Global Positioning System: Global Navigation Satellite System (GNSS), GPS, GLONASS, GALILEO, Segments - space, control, user, GPS Satellite signals, sources of errors and corrections. Applications of Remote Sensing and GIS: Applications of GIS and Remote Sensing in resource management (forestry, agriculture, urban telecommunication, transportation, water resources and environment).

37	**Power Electronics**	After the completion of course student will be able to: • To explain various power semiconductor devices like Thyristor, GTO, MOSFET and IGBT • Analyze the various rectifiers used in power circuits and DC to DC Converters • Explain the inverter operation and how harmonics are reduced and explain the basic working principle of cyclo-converters	----	**Section A** Need of power electronics, Introduction to power electronics devices (static and dynamic characteristics) power diodes, power transistor, power MOSFETS, IGBT, MCT, GTOs, Triac. Thyristor SCR: Operational characteristics, Turn ON methods, switching characteristics, thyristor protection, over voltage protection, over current protection, gate protection, snubber circuit Firing circuits for Thyristors, heating, series and parallel combination of Thyristors.	**Addition of New Course as Elective**
			----	**Section B** Commutation Techniques: Load commutation, resonant- pulse commutation, complementary commutation, impulse commutation, line commutation, Phase controlled rectifier: Principal of phase control, single and three phase converters. Effect of source impedance on the performance of converters, dual converter (ideal and practical) DC choppers: Principle, control strategies, step-up and step-down choppers.	
			----	**Section C** Inverters: Single-phase voltage source inverters 180 and 120 mode operation; Fourier analysis of single-phase inverter	

				output voltage. Pulse width modulated inverters, Reduction of harmonics in the inverter output, single-phase current source inverters with ideal switch. Cyclo-converters: Step-up and step-down cyclo-converter, Single phase to single-phase cyclo-converters three-phase half wave cyclo-converters.	
			----	**Recommended Books:** 1. Rashid, Mohammad. H. (2017). *Power Electronics Circuits, Devices and Applications*: New Delhi: PHI Publication. 2. Bimbhra, P.S. (2012). *Power Electronics***:** New Delhi: Khanna Publication. 3. Moorthy, Rama, (1991). *An Introduction ToThyristors and Their Application***:** New Delhi: Affiliated East-West Press. **Suggested E-Resources:** 1. **Power Electronics** by Prof.B.G. Fernandes, Department of Electrical Engineering, Indian Institute of Technology, Bombay. https://nptel.ac.in/courses/108101038/ 2. **Power Electronics** by Prof. D. Prasad, Dr. D. Kastha, Prof.Sabyasachi Sengupta, Prof. N. K. De, Dept of Electrical Engineering, IIT Kharagpur. https://nptel.ac.in/courses/108105066/	
38	**Robotics and Automation**	After completion of this course, students will be able to: • Develop skills of creating industrial and mobile robot projects • Implement robots like KUKA, PUMA in real industrial world	----	**SECTION A** **BASIC CONCEPTS-** Automation and Robotics – An over view of Robotics – present and future applications – classification by coordinate system and control system, Dynamic stabilization of Robotics. **POWER SOURCES AND SENSORS-** Hydraulic, Pneumatic and electric drivers	**Addition of New Course as Elective**

		• Create innovative robot designs using mathematical concepts of kinematics • Develop autonomous mobile robots in surveillance, security, home and office services		– Determination HP of motor and gearing ratio, variable speed arrangements, Path Determination - Machinery Vision – Ranging – Laser – Acoustic, Magnetic Fiber Optic and Tactile Sensor.	
			-----	**SECTION B** **MANIPULATORS-** Construction of Manipulators, Manipulator Dynamic and Force Control, Electronic and Pneumatic manipulators. **ACTUATORS AND GRIPPERS-** Pneumatic, Hydraulic Actuators, Stepper Motor Control Circuits, End Effecter, Various types of Grippers, Design consideration. Differential transformation and manipulators, Jacobians – problems .Dynamics: Lagrange – Euler and Newton – Euler formations – Problems.	
			----	**SECTION C** **KINEMATICS-** Forward and Inverse Kinematic Problems, Solutions of Inverse Kinematic problems, Multiple Solution, Jacobian Work Envelop – Hill Climbing Techniques. **PATH PLANNING-** Trajectory planning and avoidance of obstacles, path planning, Skew motion, joint integrated motion – straight line motion – Robot programming, languages and software packages. **CASE STUDY-** Multiple Robots – Machine Interface – Robots in Manufacturing and Non-Manufacturing applications – Robot Cell Design Selection of a Robot.	
			------	**Recommended Books:** 1. Groover, M. P., Weiss, M., Nagel, R. N., & Odrey, N. G. (2017). *Industrial Robotics: Technology, programming,*	

				and Applications (2/e). McGraw-Hill Education Publication 2. Niku, S. (2010). *Introduction to robotics*. John Wiley & Sons. 3. Fu, K. S., Gonzalez, R., & Lee, C. G. John Wiley & Sons. **7.** Siciliano, B., Sciavicco, L., Villani, L., & Oriolo, G. (2010). *Robotics: modelling, planning and control*. Springer Science & Business Media.	
39	**Antenna Analysis**	After the completion of course student will be able to: • Recall electromagnetic plane waves. Apply principles of electromagnetic to explain antenna radiation. Explain various antenna parameters. • Explain antenna as a point source. Design antenna patterns for different cases. • Explain dipole antennas. Establish mathematical equations for various parameters of thin linear	----	**Section A** Introduction to antenna, Radiation Mechanism,Current Distribution on a Thin Wire Antenna Fundamental parameters of antenna: Radiation pattern, Radiation power density, Radiation intensity, Beamwidth, Directivity,Antenna efficiency, Gain, Beam efficiency, Bandwidth, Polarization, Input impedance, Antenna radiation efficiency, Antenna vector effective length, Maximum directivity and Maximum effective area, Friss transmission equation and radar range equation	**Addition of New Course as Elective**
			----	**Section B** Radiation Integrals and Auxiliary Potential Functions: The Vector Potential A for an Electric Current Source J, The Vector Potential F for a Magnetic Current Source	

		antenna.		M, Electric and Magnetic Fields for Electric (J) and Magnetic (M) Current Sources, Solution of the Inhomogeneous Vector Potential Wave Equation, Far-field radiation, Duality theorem, Reciprocity and Reaction theorem, Image Theory Linear wire antennas: Infinitesimal dipole, Small dipole, Region separation, Finite length dipole, Half-wave dipole Loop Antennas: Small circular loop, Square loop	
			-----	**Section C** Introduction to Arrays, two-element array, N-element linear array: uniform amplitude and spacing, directivity,N-element linear array: uniform spacing, non-uniform amplitude Traveling wave antennas: Long wire antenna, V-antenna, Rhombic antenna Broadband antennas: Helical antenna, Folded dipole, Yagi-uda array of linear elements Log-periodic antenna, Introduction to Horn antenna: E-plane sectoral horn, H-plane sectoral horn, Pyramidal horn

(2001). *Time-Harmonic Electromagnetic Fields*. New Delhi: Wiley-IEEE Press. **Suggested E- resources:** 1. **Advanced Antenna Theory** by Dr	

				Amalendu Patnaik, Indian Institute of Technology, Roorkee. https://nptel.ac.in/courses/117107035/ 2. **Analysis and Design Principles of Microwave Antennas** by Prof.Amitabha Bhattacharya, Indian Institute of Technology, Kharagpur. https://nptel.ac.in/courses/108105114/ **3. Antennas** by Prof. Girish Kumar, Indian Institute of Technology, Bombay. https://nptel.ac.in/courses/108101092/	
40	**Communication Networks**	After the completion of course student will be able to: • Recognize and describe about the working of Computer Networks. • Illustrate reference models with layers, protocols and interfaces. • Summarize functionalities of different Layers.	**Section A** Introduction to communication systems and data communications. Introduction of network, requirement of Internet. Data Networking, Network history, Local area network topologies, WAN, MAN, VPN, (Virtual Private Network). Bandwidth, Bandwidth data rate. Multiplexing-TDM, FDM, CDMA, data encoding. Network model-layer structure of network model. OSI Model, OSI layers. TCP/IP Model layers. Arpanet, Peer to Peer communication. Communication Media and cable-structure-through wire-copper cable-STP, UTP, co-axial cable, optical fiber. Wireless media-wireless LAN, organization and standards. Wireless devices and topologies. Wireless communication, wireless security.	----	**Move this course from 3rd semester to list of Elective** **No change in course contents.**
			Section B Network layer devices-Modem, NIC, hub, bridge, switch, router, firewall, gateway. Switching Networks-circuit switching, Packet Switching. Networks-Circuit Switching, Packet Switching. Networks addressing schemes-MAC Address, Subneting, Superneting. Routing Concept, Routing protocol (RIP), Routed protocols. Introduction to IPV6 Principles of	-----	

			Internetworking. Ethernet (CSMA/CD) Token Ring and FDDI, Fast Ethernet.		
			Section C Layer protocol Structure. Data link control – Flow Control, Error Detection, Error Control. HDLC. Network layer-ARP, RARP, ICMP. Effect of Congestion and Congestion Control in Network-(Back pressure, choke packet, Implicit Congestion Signaling, Explicit Congestion Signaling. Traffic Management-Transport layer Protocols-connection oriented and connectionless services, TCP, TCP Congestion Control and Flow Control. UDP. Application Layer Protocols – HTTP, FTP, SMTP, SNMP, Telnet. Introduction to ISDN. Narrow Band and Broad Band. Introduction to WAN Technologies. ATM and Frame relay.	**----**

41	**Professional Ethics**	---	----	The course is intended to provide participants with the ability to analyze ethical situations, such as how they interact and what can be expected from them as correct ethical behaviour. In turn, any professional will benefit from a critical scrutiny of their own ethics by those from other professions. The general principles of professional ethics will be examined, as well as the distinctive problems of the different fields. The participant will also be expected to explain the pertaining issues, such as professional codes of ethics, confidentiality, obligations and Moral Values in Professional Ethics, the limits of predictability and responsibilities of the engineering profession, research misconduct, and work place rights & responsibilities. **Suggested e-resources:** 1. **Professional Ethics** by Rochester Institute of Technology. http://www.openculture.com/professional-ethics-a-free-online-course. 2. **Ethical Practice: Leading Through Professionalism, Social Responsibility, and System Design** by Prof. Leigh Hafrey, MIT, USA. https://ocw.mit.edu/courses/sloan-	**Addition of New Course as Reading Elective**

				school-of-management/15-270-ethical-practice-leading-through-professionalism-social-responsibility-and-system-design-spring-2016.	
42	**IoT Sensors and Devices**	----	----	This course is for practical learners who want to explore and interact with the IoT bridge between the cyber- and physical world. Student will learn about the 'things' that get connected in the Internet of Things to sense and interact with the real world environment – from something as simple as a smoke detector to a robotic arm in manufacturing. This course is about the devices that feel and the devices that respond. The course also describe about IoT sensors, actuators and intermediary devices that connect things to the internet, as well as electronics and systems, both of which underpin how the Internet of Things works and what it is designed to do. **Suggested e-resources:** 1. **IoT Sensors and Devices** by Curtin University. https://www.edx.org/course/sensors-and-devices-in-the-iot. 2. **Internet of Things: Sensing and Actuation** by University of California San Diego https://www.coursera.org/learn/internet-of-things-sensing-actuation.	**Addition of New Course as Reading Elective**
43	**Electromagnetic Compatibility**	----	----	This course describe the systems that generate or consume electrical energy can produce electromagnetic noise that may interfere with the operation of the system itself and/or other systems. The course will enable students to understand how the principles of electricity and magnetism can be applied to design electrical and electronic systems that can co-exist	**Addition of New Course as Reading Elective**

				harmoniously, that is, to design systems that are electromagnetically compatible with each other. The students will also be expected to explain how electromagnetic disturbances are generated in systems, how they couple to other systems, and how systems can be protected. **Suggested e-resource:** 1. **Electromagnetic Compatibility** by Daniel Mansson, KTH Royal Institute of Technology, Sweden https://onlinecourses.nptel.ac.in/noc19_ee17/preview.	
44	**Electric Vehicles**	----	-----	Electric vehicles are the future of transportation. Electric mobility has become an essential part of the energy transition, and will imply significant changes for vehicle manufacturers, governments, companies and individuals. This course prepare the students for product development positions in the automotive, communications, solar, wind turbine, and smart grid industries and service positions in the automotive industry. This course will be a first level course on electric vehicle. Students will be able to understand the operation of battery driven electric vehicle. The course will focus on areas that come under the umbrella of electric vehicles, such as vehicle dynamics, Motors, Power Electronics, Batteries, Charging and etc. Students will explore the most important aspects of this new market, including state-of-the-art technology of electric vehicles and charging infrastructure **Suggested e-resources:** 1. **Electric Vehicles Part 1** by IIT Delhi. https://onlinecourses.nptel.ac.in/noc19_	**Addition of New Course as Reading Elective**

				ee18/preview. 2. **Electric Cars: Introduction** by Delft University of Technology (TU Delft). https://www.edx.org/course/electric-cars-introduction-0.	
45	**Electronic Packaging**	----	----	This course is designed to provide a basic knowledge of the technologies and processes required for the packaging of electronic products. The focus of the course will be on the mechanical, and materials aspects which are often neglected in the design phase with potentially catastrophic consequences. Students will be expected to explore the underlying scientific and technological knowledge-based needed to become proficient builders and users of electronic systems. The students will also be able to explain the fundamental principles for packaging active and passive electronic devices; design of components, circuit boards, connectors, and assemblies; electromagnetic interference and its impact on packaging, thermal and mechanical design; and reliability assessment methods. **Suggested e-resource:** 1. **Electronics Packaging and Manufacturing** by IIT Kharagpur https://onlinecourses.nptel.ac.in/noc18_me54.	**Addition of New Course as Reading Elective**
46	**Multimedia Compression and Communication**	-----	-----	The purpose of this course is to understand the multimedia communication and compression. In this course students will be expected to explore various multimedia components and their characteristics, such as hardware, animation and graphics and able to explain the various audio and video compression techniques and apply these techniques in multimedia communication.	**Addition of New Course as Reading Elective**

				The student will also be able to develop the understanding of network architecture, protocols, resource management, multimedia operating systems, scheduling and policing mechanisms. **Suggested e-resource:** **1. Multimedia Processing** by IIT Kharagpur. https://nptel.ac.in/syllabus/117105083/.	
47	**Telecommunication switching systems and networks**	-----	-----	The course is intended to develop the good understanding of the fundamentals and application of telecommunication networks i.e. PSTN, PDN and ISDN, modern digital telecommunication switching and networks. The participants will be expected to explain the recent terminology, like switching systems, traffic management, time division switching systems, data communication Networks, routing, ISDN, voice data integration and importance of telephone traffic analysis and telephone networks. **Suggested e-resources:** 1. **Computer Networks** by Department of CSE, IIT Kharagpur https://nptel.ac.in/courses/Webcourse contents/IIT%20Kharagpur/Communication%20network/New_index1.html. **2. Data Communication** by IIT Kharagpur. https://nptel.ac.in/courses/106105082/19.	**Addition of New Course as Reading Elective**
48	**ELE 205, Semiconductor Devices and Circuits**	After completion of this course, students will be able to: • Explain the energy bands, temperature effects, carrier transport of semiconductor devices		**Section A** P-N junction: thermal equilibrium condition, under forward and reverse bias, space charge region, junction capacitance, p-n junction current, small signal model, diode current equation, junction breakdown, charge storage and transient behavior, metal semiconductor junction:	

		• Explain the switching times, capacitance of PN junction, bipolar and unipolar transistor behavior and their differences • Analyze the various feedback circuits and design power amplifiers.		Schottky Barriers and Ohmic Contacts, heterojuntion: energy band diagrams **Section B** Bipolar Junction Transistor: the transistor action, minority carrier distribution, low frequency common-base current gain, MOSFET: The MOS diode, Energy band diagrams, MOSFET fundamentals, MOS Transistor current, Threshold Voltage. FET biasing: fixed-Bias configuration, self-Bias configuration, Voltage-divider Bias configuration, FET small signal model, common source and common drain amplifiers. **Section C** Feedback amplifier: classifications of amplifiers, general feedback structure, properties of negative feedback, feedback topologies, Transfer gain with feedback, General Characteristics of negative feedback amplifiers, Input resistance, output resistance, Voltage series and current series feedback, Current shunt and voltage shunt feedback, Power amplifiers: Classification, operation, Analysis and design of Class A, Class B, Class-AB, Class C, Power dissipation and efficiency calculations, amplifier distortion. **Recommended Books:** 1. S. Simon. M.(2002), *Semiconductor Devices Physics and Technology (2/e)* , New Jersey, USA: JOHN WILEY & SONS Publication 2. Millman. J, Halkias. C, Parikh. C. (2017). *Integrated Electronics. (2nd ed).* New Delhi: TMH Publications. 3. Streetman Ben. G. (2006). *Solid State Electronic Devices (6th ed)* New Delhi: PHI Publications.	

				4. Smith. S.(2008). *Microelectronics Circuits. (5th ed).* New Delhi: Oxford press. **Suggested E-Resources:** 1. **Semiconductor Devices and Circuits** by Prof.SanjivSambandan, Department of Instrumentation and Applied Physics, Indian Institute of Science, Bangalore. https://nptel.ac.in/courses/108108112/ 2. **Analog Electronic Circuits** byProf. S. C. Dutta Roy, Department of Electrical Engineering Indian Institute of Technology Delhi. https://nptel.ac.in/courses/108102095/	

Annexure IV

Name of Programme: Master of Technology (VLSI Design)

Programme Educational Objectives: The M.Tech. (VLSI Design) programme aims for the holistic development of students through the unique and innovative fivefold educational ideology of Banasthali Vidyapith. State-of-the-art VLSI technology requires research in physical devices as well as novel design and development of integrated circuits.The M. Tech. (VLSI Design) programme at Department of Electronics aims to impart knowledge of VLSI system design covering algorithms, hardware description languages, system architectures, physical designs, verification techniques, simulation & synthesis, low power design techniques and etc.The programme offersfoundational subjects like semiconductor devices, digital, analog and RFIC design, embedded system, electronic system packaging etc. Many courses have prominent lab component, offering hands-on training and exercises on numerous practical aspects of crucial importance. The students also get an opportunity to participate in projects related to design and optimization of VLSI circuits and systems.

The main objectives of M.Tech. (VLSI Design) programme are:

- To provide in-depth knowledge of device fundamentals and modern circuits design to gain an ability to analyze, design, and implement VLSI Systems circuits and systems.
- To enrich students to excel in research leading to cutting edge technology in VLSI design to create competent, innovative and productive professionals.
- To train them to understand the various recent issues and find the solutions with good scientific and engineering knowledge, so as to comprehend, analyze, design, and create novel products and develop the capability to prepare the scientist report in lucid and articulate form.
- To provide students with an academic environment to develop scientific awareness, leadership, ethical conduct, positive attitude, societal responsibilities and the lifelong learning needed for a successful professional career.
- To develop entrepreneurial skills in starting industries using VLSI technology.
- Practice the ethics of their profession and inculcate a lifelong learning culture.
- Communicate effectively and manage resources skilfully as members and leaders of the profession.

Programme Outcomes:

PO1. **Scholarship of Knowledge:** Acquire in-depth knowledge of VLSI technology in wider and global perspective, with an ability to discriminate, evaluate, analyze, synthesize and integrate for enhancement of knowledge. Graduates will be able to apply the knowledge of computing, mathematics, science and electronic engineering for designing VLSI circuits.

PO2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using basic principles of mathematics, science and engineering.

PO3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. Graduates will have an ability to design and conduct experiments, perform analysis and interpret the problems of VLSI design.

PO4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern VLSI tools including modeling to complex engineering activities with an understanding of the limitations.

PO6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8. **Engineering Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. **Leadership Skills:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects in multidisciplinary environments.

PO12. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

*** L - Lecture hrs/week; T - Tutorial hrs/week;**
P - Project/Practical/Lab/All other non-classroom academic activities, etc. hrs/week; C - Credit Points of the Course

Student can opt for at most 2 additional Open (Generic) audit/credit Elective from other disciplines opting at most 1 per semester in Semesters I, & II with prior permission of respective heads, time table permitting.

List of Reading Electives:

S. No.	Course Code	Reading Elective
1.	VLSI 601R	High Level Synthesis
2.		Advanced Electronics Packaging
3.		Digital Image Processing
4.	VLSI 604R	VLSI Testing and Design for Testability
5.		Compound Semiconductor Technology
6.		Organic Electronic Devices

S. No.	Course List	Learning Outcome	Existing Syllabus	Suggested Syllabus	Remarks
1.	**VLSI 507, Digital CMOS IC Design**	After completion of this course, students will be able to: • Gain in-depth understanding of designing and analysis of CMOS inverters • Explain the fabrication process and layout design of CMOS digital IC • To describe the operation of semiconductor memories and low power circuits.	—	—	**No Change in course contents.**
			Text Books: 1. N. H. E. Weste and K. Eshraghian, Principles of CMOS VLSI Design, Addison-Wesley Publishing Co., 2nd Edition, 1993. 2. Nell H. E. Weste and Kamran Eshraghian, "Principles of CMOS VLSI Design", 2nd Edition, Addision Wesley,1998. 3. Jacob Backer, Harry W. Li and David E. Boyce, " CMOS Circuit Design, Layout and Simulation ", Prentice Hall of India, 1999 4. Sung-Mo Kang, Yusuf Leblebici,, "CMOS Digital Integrated Circuits" - Analysis and design, Tata McGraw-Hill - third edition. 5. Douglas a. Pucknell and K.Eshragian., "Basic VLSI Design" 3rd Edition. PHI, 2000.	**Recommended Books:** 1. Weste, Neil. H. E.,& Eshraghian, K. (1993). *Principles of CMOS VLSI Design.*Boston, New York: Addison Wesley Publication. 2. Weste, Neil. H. E., & Eshraghian, K. M.J.S .Smith, - "Application - Specific Integrated Circuits" - Addison -Wesley Longman Inc., 1997	*Specific Integrated Circuits*.Boston, New York: Addison Wesley Publication. **Suggested E-resource:** **1. Hardware Modeling using Verilog** by Prof. Indranil Sengupta, Department of Computer Science and Engineering, Indian Institute of Technology, Kharagpur https://nptel.ac.in/courses/106105165/1	
4.	**VLSI 512L, HDL Based System Design Lab**	After completion of this laboratory course, students will be able to: • describe the IEEE Standard 1076 Hardware Description Language (VHDL) • Model complex digital systems at several levels of abstractions; behavioral and structural, synthesis and rapid system prototyping. • Develop and simulate register-level models of hierarchical digital systems • Develop a formal test bench from informal system requirements	~~This lab targets to develop an understanding of VLSI design using HDL languages among the students. Different objectives are given to the different group of students to develop a design using Hardware description languages and simulate it using EDA tools.~~	1. Design all gates using VHDL, and verify functionality through simulation outcomes 2. Write VHDL program for Half adder circuit, and verify functionality through simulation outcomes 3. Write VHDL program for Full adder circuit, and verify functionality through simulation outcomes 4. Write VHDL program for Multiplexer circuit, and verify functionality through simulation outcomes 5. Write VHDL program for Demultiplexer circuit, and verify functionality through simulation outcomes 6. Write VHDL program for encoder circuit, and verify functionality through simulation outcomes 7. Write VHDL program for decoder circuit, and verify functionality through simulation outcomes 8. Write VHDL program for D Flip Flop, and verify functionality through simulation outcomes 9. Write VHDL program for T Flip Flop, and verify functionality through simulation outcomes	**Learning Outcomes added** **~~Deleted~~** **Added**

				10. Write VHDL program for SR Flip Flop, and verify functionality through simulation outcomes 11. Write VHDL program for JK Flip Flop, and verify functionality through simulation outcomes 12. Write VHDL program for modulo 8 up Asynchronous counter circuit, and verify functionality through simulation outcomes 13. Write VHDL program for modulo 8 down Asynchronous counter circuit, and verify functionality through simulation outcomes 14. Write VHDL program for modulo 8 up synchronous counter circuit, and verify functionality through simulation outcomes 15. Write VHDL program for modulo 8 down synchronous counter circuit, and verify functionality through simulation outcomes 16. Write VHDL program for shift and add multiplier circuit, and verify functionality through simulation outcomes 17. Write VHDL program for 4 bit ALU, and verify functionality through simulation outcomes 18. Write VHDL program for parallel adder circuit, and verify functionality through simulation outcomes 19. Write VHDL program for sequence detector circuit, and verify functionality through simulation outcomes 20. Write VHDL program for serial adder circuit, and verify functionality through simulation outcomes	
5.	**VLSI 516, IC**	After completion of this course, students will be able	—	—	**No Change in course**

	Fabrication Technology	to: • **U**nderstand thin film deposition and vacuum evaporation process. • Differentiate dry and wet oxidation process and printing methods. • Perform measurement techniques for extracting electrical properties of devices. • Understand diffusion and ion implantation process.	**Text Book:** 1. S. M. Sze, VLSI Technology, McGraw Hill. **Reference Books:** 1. S. K. Gandhi, The Theory and Practice of Microelectronics, John Wiley. 2. D. Nagchoudhuri. Microelectronics technology, Pearson. 3. C. Y. Yang and S. M. Sze, VLSI Technology, Tata McGraw Hill. ~~4. S. M. Sze, Semiconductor Technology.~~	**Recommended Books:** 1. Sze, Simon. (2017). *VLSI Technology*. (2002). *Microelectronics technology*. New Delhi: Pearson Publication. 4. Chang, C. Y.,& Sze, Simon. (1996). *ULSI Technology*. Singapore,Tata McGraw Hill Publication. **Suggested E-resources:** 1. **Introduction to IC fabrication**by Prof. Hardik J Pandya S, Department of Electronic Systems Engineering, IISC, Bangalore. https://nptel.ac.in/courses/108108111/3. **2. MOSFET Fabrication for IC** by Dr. Nandita Dasgupta Department of Electrical Engineering, Indian Institute of Technology, Madras. https://nptel.ac.in/courses/117106093/3.	**contents.** ~~**Deleted**~~
6.	**VLSI 516L, IC Fabrication Technology Lab**	After completion of this laboratory course, students will be able to: • Understand fabrication process flow • Understand Silvaco TCAD tool. • understand the procedure to modeling devises and analysing their characteristics	Silvaco 1. Model the fabrication process flow of NMOS with I/V characteristics curve 2. Model the fabrication process flow of PMOS with I/V characteristics curve 3. Model the fabrication process flow of NPN/PNP mos based transistor with input/output characteristics curve. 4. Model the fabrication process flow of pn junction diode.	**All experiments will be performed on Silvaco TCAD Tool.** 1. Model the fabrication process flow of NMOS with I/V characteristics curve 2. Model the fabrication process flow of PMOS with I/V characteristics curve 3. Model the fabrication process flow of NPN/PNP mos based transistor with input/output characteristics curve. 4. Model the fabrication process flow of PN junction diode.	**Added**
7.	**Minor Project (Part-I)**	After completion of this course, students will be able to:	**-----**	**-------**	**Learning Outcomes Added and**

		• Formulate the project objectives and deliverables. • Estimate the physical resources required, and make plans to obtain the necessary resources. • Develop plans with relevant people to achieve the project's goals.			**this course has no prescribed syllabus.**
8.	**VLSI 525, Solid State Device Modeling and Simulation**	After completion of this course, students will be able to: • Explain the carrier densities, charge transport, band diagrams and their relations to the device characteristics. • Describe the SPICE device models and apply the basic governing model equations to analyze BJT and MOSFET. • Explain and analyze the operation of optical, microwave and quantum effect devices.	—	—	**No Change in course contents.**

10.	**VLSI 503L, Analog and**	After completion of this laboratory course, students will be able to:	1. ~~Simulate simple current mirror and determine small signal output resistance.~~ ~~2. Simulate CASCODE current mirror and~~	1. Design NMOS simple current mirror for channel length of 1 µm and 180 nm and study DC analysis. Compare the results at	

	Mixed Signal IC Design Lab	• Analyse and interpret the waveform, comparison of simulation results with the theoretical analysis. • Ability to use the simulation software for performing the experiments. • Ability to design and test various amplifier circuits, which meets the desired specifications.	~~determine small signal output resistance.~~ ~~3. Design differential amplifier and study its DC and transient response.~~ ~~4. Study of AC response and bandwidth calculation of differential amplifier.~~ ~~5. Study of AC and transient response of differential amplifier.~~ ~~6. Design Common Source (CS) amplifier and study its DC and Transient response.~~ ~~7. Study of frequency response of CS amplifier.~~ ~~8. Design source follower and study its DC and Transient and AC response.~~ ~~9. Design two stage Op-Amp and study of its DC and Transient characteristics and determine Slew rate.~~ ~~10. AC characteristics, UGB and Phase Margin estimation of two stage Op-Amp~~	two different channel lengths. 2. Analyze AC characteristics of the simple current mirror and determine small signal output resistance. Comparison of small signal resistance at different channel lengths. Discuss the results. 3. Draw the schematic of NMOS CASCODE current mirror for channel length of 1 □ m and analyze DC response. Do the same for 180 nm channel length. Compare and discuss the results. 4. Analyze AC characteristics of the CASCODE current mirror and determine small signal output resistance. Comparison the small signal resistance with simple current mirror. Discuss the results. 5. Design CMOS differential amplifier for a given channel length and draw the schematic cell view of differential amplifier. 6. Create the symbol for the differential amplifier and build the differential amplifier test design. 7. Set up and run simulations (AC, DC and Transient) on the Differential Amplifier Test design. 8. Calculate the gain, bandwidth and CMRR of Differential pair. Discuss the results. 9. Design of current source loaded common source amplifier. create a new cell view and build Common Source Amplifier. Create a symbol for the Common Source Amplifier 10. Build cs_amplifier_test circuit using your cs_amplifier, set up and run simulations(AC, DC and Transient) on the cs_amplifier_test design. 11. Determine the gain, bandwidth and	**Learning Outcomes Added** **Added**

				voltage swing of CS amplifier. Comment on the results. 12. Create a new cell view and build Common Drain (CD) Amplifier. Build CD amplifier test circuit using your CD amplifier. Set up and run simulations(AC, DC and Transient) on the CD amplifier test design. 13. Determine the gain, bandwidth and voltage swing, output resistance of CS amplifier. Comment on the results. 14. Build schematic capture of two stage operational amplifier (OP-AMP) using the previously created symbols of CS amplifier and CD amplifier. Thereafter Create a symbol for the OP-AMP. 15. To build op-amp_test circuit using your op-amp. Set up and run simulations(AC, DC and Transient) of op-amp_test circuit. 16. Determine voltage gain, slew rate, UGB and Phase Margin of two stage Op-Amp and compare with the design specifications. Comments on the results	
11.	**VLSI 504, ASIC Design**	After completion of this course, students will be able to: • Analyze the concept of Full Custom ASIC and Semi-Custom ASIC, Cell Libraries, Data Logic Cells, Low-level Design Entry and Low Level Design Languages • Explain ASIC I/O Cell : DC Output, AC Output, DC Input, AC Input, Clock Input, Power	—	—	**No Change in course contents.**

35	**Photonics Integrated Circuits**	After completion of this course, students will be able to: • Describe the optical waveguides and optical couplers with the help of coupled mode theory		**Section A** Optical Waveguide Modes, Planar Waveguides, Symmetric and Asymmetric, Slab and channel waveguides, Optical Couplers: Prism Couplers, Gräting Couplers, Tapered Couplers, Fiber to Waveguide Couplers, Multilayer Planar Waveguide Couplers, Dual-Channel Directional	**New Course Added as elective.**

		• Explain the basic operating mechanisms of optical switches and modulators • Identify the performance limiting factors and applications of integrated optics		Couplers, Coupled-Mode Theory.	
				Section B Electro-Optic Modulators: Basic Operating Characteristics of Switches and Modulators, The Electro-Optic Effect, Single-Waveguide Electro-Optic Modulators, Dual-Channel Waveguide Electro-Optic Modulators. Acousto-Optic Modulators: Acousto-Optic Effect, Raman-Nath-and Bragg Type Modulators, Acousto-Optic Frequency Shifters.	
				Section C Distributed-Feedback Lasers: Theoretical Considerations and performance characteristics, Integrated Optical Detectors: Depletion Layer Photodiodes, Specialized Photodiode Structures, Techniques for Modifying Spectral Response, performance limiting factors. Applications of Integrated Optics and Current Trends: Opto-Electronic Integrated Circuits and future projections.	
				Recommended Books: 1. Hunsperger, Robert. G. (1995). *Integrated Optics Theory and Technology*. Berlin, New York: Springer. 2. Nishihara, Hiroshi. Haruna, Masamitsu.,& Suhara, Toshiaki. (1989). *Optical integrated circuits*. New York: McGraw-Hill Publication. 3. Reed, Graham. T., & Knights, Andrew. P. (2004). *Silicon photonics: An Introduction*. New York: John Wiley & Sons. 4. Tamir,T.(1990). *Guided wave Opto-electronics*. Berlin, Heidelberg: Springer. **Suggested E- resource:**	

				1. **Photonic Integrated Circuits** by Dr. Srinivas Talabatulla, Department of Electronics & Communication Engineering, IISc, Bangalore. https://nptel.ac.in/courses/117108142/	
36	**VLSI 601R, High Level Synthesis**		**Section A** Introduction: Level of Abstraction, Need for Design Automation on Higher Abstraction Levels, Essential issues in Synthesis. Architectural Models in Synthesis. Combinational Logic, Finite State Machines. Quality Measures: Area and Performance measures. Other Measures. **Section B** Design Description Language: HDLs, Hardware Specific Features, Formats, HDLs for DSP, Simulation Based HDLs, Modeling Guidelines for HDLs Design Representation and Transformations: Partitioning. Scheduling. Allocation. **Section C** Design Methodology for High-Level Synthesis: Generic Synthesis, System Synthesis, Chip Synthesis, Logic and Sequential Synthesis, Physical-Design Methodology, System and component Databases, Conceptualization Environment. High Level Synthesis ofASICs. High-Level Synthesis for Real-Time Digital Signal Processing.	This course expose students to the advanced HDL design techniques, methodology and industrial standard EDA tools in electronic design. This course also discusses the new ideas and techniques in high level synthesis, essential issues in synthesis, architectural model, and guidelines for HDL design. Students will be expected to explore design methodology for high level synthesis, chip synthesis and physical design methodology.	
			Text and Reference Books: 1. Daniel D. Gajski, Nikil D. Dutt, Alien C-H Wu, Steve Y-L Lin And High-Level Synthesis: Introduction to Chip	**Suggested E- resources:** 1. **High level Synthesis** by IIT Guwahati. https://nptel.ac.in/courses/117103125/4. 2. **Synthesis of Digital Systems** byDr.	

			and System Design, Kluwer Academic Publishers. 2. Wayne Wolf, High-Level VLSI Synthesis, Raul Camposano, Kluwer Academic Publishers. 3. David C. Ku, Giovanni de Micheli, High Level Synthesis of ASICs Under Timing and Synchronization Constraints, Kluwer Academic Publishers 4. Jan Vanhoof, Karl Van Rompaey, Ivo Bolsens, Gert Goossens, Hugo De Man, High-Level Synthesis for Real-Time Digital Signal Processing, The CATHEDRAL-11 Silicon Compiler, Kluwer Academic Publishers.	Preethi Ranjan Panda, Department of Computer Science & Engineering, Indian Institute of Technology, Delhi. https://nptel.ac.in/courses/106102181/7	
37	**VLSI 604R, VLSI Testing and Design for Testability**		**SECTION-A** Physical defects and their modeling; stuck at faults; Bridging Faults; Fault collapsing Fault Simulation Deductive, Parallel and Concurrent; Critical Path Tracing; Test Generation for Combinational Circuits : D-Algorithm, Boolean Difference, PODEM Random, Exhaustive and Weighted Random Test Pattern Generations Aliasing and its effect on Fault coverage **SECTION-B** PLA Testing: cross-point Fault Model, Test Generation, easily testable design, Memory testing: Permanent Intermittent and Pattern Sensitive Faults; Delay Faults and Hazards; Test Generation Techniques	The course attempts to expose the students to the most recent, yet fundamental, VLSI test principles in an effort to help them design better quality products that can be reliably manufactured in large quantity. The course explores the issue related to the physical defects, test generation technique for combinational and sequential circuits, controllability and obeservability and redundancy.	

			SECTION-C Test Generation for Sequential Circuits: Time Frame Expansion; Controllability and Obeservability Scan Design.Scan path and LSSD, boundary Scan, BILBO, Bounday Scan For Board Level Diagnosis. Concept of Redundancy, spatial redundancy. Time redundancy.		
			References: 1. M. Abramovici, M.A. Breuer and R.D. Friedman, Digital Systems Testing and Testable Design, Revised Edition, IEEE Press, 1995. 2. V. Agarwal and S. C. Seth, Test Generation for VLSI Chips, IEEE CS Press, 1989. 3. E. J. McCluskey, Logic Design Principles, Prentice Hall, 1986.	**Suggested E- resources:** 1. **Digital VLSI Testing** by Prof. Santanu Chattopadhyay Department of Electronics and Electrical Communication Engineering, IIT Kharagpur. https://onlinecourses.nptel.ac.in/noc17_ec02/preview. 2. **Testing and Verification of VLSI Circuits** by Prof. Virendra Singh IIT Mumbai. https://www.ee.iitb.ac.in/~viren/Courses/2012/EE709.htm	
38	**Advanced Electronic Packaging**			This course is designed to equip students with the required knowledge and concepts in mechanical, thermal, and reliability concern of modern electronic packaging. Emphasis is on IC packaging performance and its achievement through the proper material selection. The course will explore the multichip module, electrical autonomy IC assembly, challenges in the electronic packaging, and can recognize the various methods available and selection of appropriate packaging solution for particular applications.	
				Suggested e-resource: **1. An Introduction to Electronics Systems**	

				Packaging by IISC Bangalore. https://nptel.ac.in/courses/108108031/	
39	**Compound Semiconductor Technology**			This course provides students with the basic understanding of Non-Silicon MOSFET technology. The students should be able to use properties and trade-offs of compound semiconductors (GaAs, InAs, InP and InSb) for design of high performance MOSFETs. The students will be able to explain the challenges and power performance of strained III-V MOSFETs, the high k dielectric based MOSFETs. Students should also be able to discuss the Future Scaled CMOS and hybrid CMOS technology. **Suggested e-resources:** 1. **Nanoelectronics: Devicesand Materials**by Prof. K. N. Bhat Centre for Nano Science and Engineering. https://nptel.ac.in/courses/117108047/28. 2. **Compound Semiconductor Devices** by Prof. C. G. Fonstad, MIT, USA. https://ocw.mit.edu/courses/electrical-engineering-and-computer-science/6-772-compound-semiconductor-devices-spring-2003/lecture-notes/.	
40	**Digital Image Processing**			This course provides an introduction to basic concepts, methodologies and algorithms of digital image processing focusing on image analysis and image enhancement and restoration for easier interpretation of images. The course provides overview of digital image processing including visual perception, Image Digitization, Basic Transformations, Interpolation and Resampling, Image Interpolation, Image Transformation, Image Enhancement, Image Segmentation, Morphology, Object Representation and Description, object Recognition etc.The course focuses on to create an ability in	

				students to analyze a problem in this domain and identify the computing requirements appropriate for its solution; an ability to design, implement and evaluate a computer-based system, process, component or program to meet desired needs. **Suggested e-resource:** 1. **Digital Image Processing** by Prof .P. K. Biswas, IIT Kharagpur. https://nptel.ac.in/courses/117105079/	
41	**Organic Electronic Devices**			Organic electronic devices are quickly making their way into the commercial world, with innovative thin mobile devices, high-resolution displays, and photovoltaic cells. Purpose of the course is to learn about this highly promising technology, which is based on small molecules and polymers, and to discuss how these materials can be implemented successfully in established organic electronic modules. In this course students will gain the ability to tie molecular transport phenomena with macroscopic device response such that you will be well-prepared to analyse troubleshoot, and design the next generation of organic electronic materials and devices. **Suggested e-resources:** 1. **Organic Electronic Devices** by Dr. Bryan W. Boudouris, Purdue University. https://www.edx.org/course/organic-electronic-devices-purduex-nano515x	

Annexure V

Name of Programme: B.Sc.

Disciplinary Course-Physics

Programme Educational Objectives:

- To provide necessary knowledge and leadership skills for a successful professional career.
- To enhance learning and to adapt in a world of constantly evolving and innovative electronics technology.
- To develop the ability to collaborate with others to solve problems with creative thinking and effective communication.

Programme Outcomes: On completion of the B.Sc. the student will be able to

- Apply knowledge of mathematics and science.
- Understood the basic concepts, fundamental principles, and the scientific theories related to various scientific phenomena and their relevancies in the day-to-day life.
- Acquire the skills in handling scientific instruments, planning and performing in laboratory experiments.
- Think creatively (divergently and convergent) to propose novel ideas in explaining facts and figures or providing new solution to the problems. Realized how developments in any science subject helps in the development of other science subjects and vice-versa and how interdisciplinary approach helps in providing better solutions and new ideas for the sustainable developments.
- Realized that knowledge of subjects in other faculties such as humanities, performing arts, social sciences etc. can have greatly and effectively influence which inspires in evolving new scientific theories and inventions.
- Imbibed ethical, moral and social values in personal and social life leading to highly cultured and civilized personality. Developed various communication skills such as reading, listening, speaking, etc.
- Function with multidisciplinary teams.

Programme Scheme:

Note: Student can opt for at most 2 additional Open (Generic) audit/credit Elective from other disciplines opting at most 1 per semester in Semesters III, IV, V or VI with prior permission of respective heads, time table permitting.

L - Lecture hrs/week; T - Tutorial hrs/week;
P-Project/Practical/Lab/All other non-classroom academic activities, etc. hrs/week; C- Credit Points of the Course

Course Details:

S. N.	Course List	Learning Outcome	Existing Syllabus	Suggested Syllabus	Remarks
1.	PHY103 Electricity and Electronics	After completion of this course, the students will be able to- • learn fundamentals and concepts of electricity and electronics • learn about the basic concepts of electronic and electrical circuit analysis techniques • apply the above motioned concept to design a range of electronic devices and circuit configurations.	**Recommended Books:** 1. Tayal D C (2005) Electricity and Magnetism, Himalaya Publishing House. 2. Saxena M. P. (1997) Electricity and Magnetism, College Book House. 3. Bhargava N N (2000), Basic Electronic, Tata McGraw Hill. 4. Mehta V.K.(2002), Principles of Electronics, S. Chand publisher. **References Books:** 1. Sadiku Mathew N.O.(2005) Elements of Electromagnetics, New Delhi, Oxford Univ. Press 2. Purcell, E. M. (1963). Berkeley physics course. *Electricity and magnetism*. 3. Millman, J., & Halkias, C. C. (1972). *Integrated electronics: analog and digital circuits and systems*. McGraw-Hill. **Suggested web-resources:** https://www.coursera.org/browse/physical-science-and-engineering/electrical-engineering https://www.edx.org/learn/electronics		**No change in the entire course** Update e-Resources

2.	PHY 104L	After completion of this course, the students will be able to- • demonstrate laboratory skills in physics laboratory and analyze the measurements to draw valid conclusions. • have oral and written scientific communication, and to think critically and work independently. • to understand principles of law of electricity magnetism.	1. Determine the energy gap using junction diode 2. Study the characteristics of junction diode and zener diode 3. Study the voltage regulation and ripple factor of half and full wave rectifier 4. Study the bridge rectifier with filters 5. Study the characteristics of PNP/NPN junction transistor 6. Study the characteristics of FET 7. Study a voltage multiplier circuit to generate high voltage DC from AC 8. Study the characteristics of optoelectronic devices (LED, Photodiode and Phototransistor) 9. Study the OPAMP in (i) inverting mod (ii) noninverting mod (iii) integrator (iv) differentiator 10. Study AND, OR, NOT, NOR and NAND logic gates and verify the truth tables ~~11. Study the voltage gain and frequency response of a double stage RC coupled transistor amplifier~~ ~~12. Study the characteristics of a thermistor~~	1. Determine the energy gap using junction diode 2. Study the characteristics of junction diode and zener diode 3. Study the voltage regulation and ripple factor of half and full wave rectifier 4. Study the bridge rectifier with filters 5. Study the characteristics of PNP/NPN junction transistor 6. Study the characteristics of FET 7. Study a voltage multiplier circuit to generate high voltage DC from AC 8. Study the characteristics of optoelectronic devices (LED, Photodiode and Phototransistor) 9. Study the OPAMP in (i) inverting mod (ii) noninverting mod (iii) integrator (iv) differentiator 10. Study AND, OR, NOT, NOR and NAND logic gates and verify the truth tables 11. Study of electromagnetic induction by oscillation of bar magnet. 12. Mutual induction by direct method. 13. Verification of Faraday's law *and Lenz's law.* 14. B-H Curve using Magnetometer. 15. To determine Self Inductance of a Coil by Anderson's Bridge using AC 16. To determine Self Inductance of a Coil by Rayleigh's Method. 17. Determination of mutual inductance of a pair of coils using BG.	50 % of the syllabus deals with electricity and electromagnetism so experiment no. 11 and 12 is removed from the existing list and 4 new experiment is introduced in proposed list.

3.	PHY 107 Optics	After completion of this course, the students will be able to- • appreciate the efficacy of Fourier transforms and their application to physical systems. • understand the role of the wave equation and appreciate the universal nature of wave motion in a range of physical systems • understand dispersion in waves and model dispersion using Fourier theory. • understand diffraction and imaging in terms of Fourier optics and gain physical and intuitive insight in a range of physics via the spatial Fourier Transform.	**Recommended Books:** 1. Khandelwal D.P. (1973), Text book of optics and Atomic Physics, Pub. Shivlal Darwal, Agra. 2. Lal B. & Subramanium (2006), Optics by Brij Lal and Subrahmanium, S. Chand Publication. 3. Ghatak, A., & Thyagarajan, K. (1998). *An introduction to fiber optics*. Cambridge university press. 4. Ghatak, A. K. (1971). An introduction to modern optics. *An introduction to modern optics., by Ghatak, AK. New York, NY (USA): McGraw-Hill.* **Reference Books:** 1. Ghatak, A. K. (2012). *Contemporary optics*. Springer Science & Business Media. 2. Hecht, J., & Long, L. (1993). *Understanding fiber optics* (Vol. 3). Prentice Hall. 3. Cherin, A. H., & Short, L. (1983). *An introduction to optical fibers* (p. 135). New York: McGraw-Hill. 4. Hecht E (2006) Optics, Pearson Education. 5. Ghatak, A. K., & Thyagarajan, K. (1989). *Optical electronics*. Cambridge University Press. **Suggested web-resources:** https://www.coursera.org/courses?query=optics https://swayam.gov.in/courses/4906-july-2018-modern-optics	**No change in the entire course** Update e-Resources

4.	PHY 107 L Optics Lab	After completion of this course, the students will be able to- • demonstrate laboratory skills in physics laboratory and analyze the measurements to draw valid conclusions. • have oral and written scientific communication, and to think critically and work independently. • to understand principles of Optics and wave nature of light.		**No change in the entire course**

5.	PHY 201 Mechanics	After completion of this course, the students will be able to- • demonstrate proficiency in mathematics and the mathematical concepts needed for a proper understanding of physics. • show that they have learned laboratory skills, enabling them to take measurements in a physics laboratory and analyze the measurements to draw valid conclusions. • have oral and written scientific communication, and think critically and work independently.	**Recommended Books:** 1. Saxena M. P. Rawat S S (2000) Mechanics, College Book House. 2. Saxena M. P. Rawat S S (1997) Oscillations and Waves, College Book House. 3. Mathur D. S. (2005) Mechanics, S. Chand publishing. 4. Satya Prakash (2007) Waves & Oscillations, Kedar Nath Ram Nath publishing. **Reference Books:** 1. Srivasatava P. K. (2006) Mechanics New Age International Publisher, Delhi. 2. Alonso, M., & Finn, E. J. (1967). *Fundamental university physics* (Vol. 2). Reading, MA: Addison-Wesley. 3. Purcell, E. M. (1963). Berkeley physics course. *Electricity and magnetism,UC Berkeley.* 4. French, A. P. (1971). *Vibrations and waves*. CRC press. **Suggested web-resources:** https://ocw.mit.edu/courses/physics/ https://academicearth.org/physics/ https://www.khanacademy.org/science/physics	**No change in the entire course** Update e-Resources

6.	PHY 201L Mechanics Lab	After completion of this course, the students will be able to- • demonstrate laboratory skills in physics laboratory and analyze the measurements to draw valid conclusions. • have oral and written scientific communication, and to think critically and work independently. • to understand principles of Newtonian mechanics, friction, and motion of bodies.		**No change in the entire course**

7.	PHY 203 ~~Statistical and Mathematical Physics~~ **New Proposed Title-** Thermodynamics, Statistical and Mathematical Physics	After completion of this course, the students will be able to- • understand the laws of thermodynamics in their various forms and explain their physical significance. • state the thermodynamic potentials and recognize the most appropriate potential for application to a particular problem. • derive and state the Boltzmann, Fermi-Dirac and Bose-Einstein distributions. • know the key links between thermodynamics and statistical physics and apply these to problems.	**Recommended Books:** 1. Zeemansky M.W. (1968) Heat and Thermodynamics, McGraw Hill, 5th ed. 2. Singhal, Agrawal Prakash (2007)Heat and Thermodynamics, Pragati Prakashan. 3. Kakani S. L. Hemraj C (1994) Mathematical Physics and Special Theory of Relativity College Book Centre, Jaipur. 4. Rajput B S. (2005), Mathematical Physics, Pragati Prakashan. **Reference Books:** 1. Reif, F. (2009). Fundamentals of statistical and thermal physics. Waveland Press. 2. Holman, J. P. (1974). Thermodynamics McGraw-Hill. New York. 3. Lokanathan, S., & Gambhir, R. S. (1991). Statistical and Thermal Physics: an Introduction. Prentice Hall. 4. French, A. P. (2017). Special relativity. CRC Press. 5. Arfken, G. B., & Weber, H. J. (1999). Mathematical methods for physicists, Elsevier. **Suggested web-resources:** https://cosmolearning.org/courses/thermal-statistical-physics/ https://ocw.mit.edu/courses/physics/8-333-statistical-mechanics-i-statistical-mechanics-of-particles-fall-2013/video-lectures/lecture-1-thermodynamics-part-1/ https://programsandcourses.anu.edu.au/course/PHYS2020	**No change in the entire course contents, but the title of the course has been changed** Update e-Resources

8.	PHY 202L	After completion of this course, the students will be able to- • demonstrate laboratory skills in physics laboratory and analyze the measurements to draw valid conclusions. • have oral and written scientific communication, and to think critically and work independently. • to understand principles of thermodynamic laws experimentally	1. Determine the mechanical equivalent of heat (J) by using Calendar and Barn's constant flow meter. 2. To Determine the thermal conductivity of bad conductor (samples may be Glass or Ply Wood or Cardboard) using Lee's disc method. 3. Determine the melting point of given material using platinum resistance thermometer. 4. Plot thermo emf Vs temperature graph and find the inversion temperature and neutral temperature 5. To determine the thermodynamic constant (C_p/C_v) using Clement and Desorme's method. ~~6. Study of the variation of total thermal radiation with temperature and verify the stefan's law.~~ 7. To determine the value of stefan's constant. 8. Verify certain laws of probability. ~~9. To study the RC transmission line.~~ 10. ~~To study the LC transmission line~~. 11. To determine the resistance per unit length of Carey Fosters bridge and finds the resistance of a given wire (Unknown resistance).	1. Determine the mechanical equivalent of heat (J) by using Calendar and Barn's constant flow meter. 2. To Determine the thermal conductivity of bad conductor (samples may be Glass or Ply Wood or Cardboard) using Lee's disc method. 3. Determine the melting point of given material using platinum resistance thermometer. 4. Plot thermo emf Vs temperature graph and find the inversion temperature and neutral temperature 5. To determine the thermodynamic constant (C_p/C_v) using Clement and Desorme's method. 6. To verify the Stefan's law by electrical method. 7. To determine the value of stefan's constant. 8. Verify certain laws of probability. 9. To determine the resistance per unit length of Carey Fosters bridge and finds the resistance of a given wire (Unknown resistance). 10. Determination of the coefficient of linear thermal expansion (α) of the given sample. Compare and verification of $(\alpha_{copper}) < (\alpha_{brass}) < (\alpha_{aluminum})$. 11. To determine mechanical equivalent of heat (J) Joule's constant by electrical method. 12. Determine the resistance per unit length of bridge wire and then determine the temperature coefficient of Platinum resistance thermometer (PTR). **13.** To demonstrate Seebeck Effect with the help of Thermocouple module.	Experiment No. 6, 10, 11, 12 and 13 have been proposed to strengthen the laboratory practices. Expt. No. 9 and 10 in existing course have been removed due to unmatched with theory

9.	5.1 ~~Quantum Atomic Molecular Physics~~ Quantum Mechanics and Spectroscopy	After completion of this course, the students will be able to- • solve the Schrödinger equation for model systems of relevance within chemistry and physics • describe many-electron atoms with the independent particle model • describe the structure of the periodic system and the connections between the properties of the elements and their electron configurations • describe the bases behind interaction between light and matter and account for the most common spectroscopic methods for studies of molecules in the IR and UV/Vis areas	**Recommended Books:** 1. Kakani S. L., Hemrajni C. (1995) Elementary Quantum Mechanics and Spectroscopy, College Book Centre, Jaipur. 2. Singh K., Singh S. P. (2005) Elements of Quantum Mechanics, S. Chand. 3. Raj Kumar (1997), Atomic and Molecular Spectera, Kedar Nath Ram Nath publisher. 4. Rawat S. S. Singh Sardar (2000) Prarambhik Quantum Yantriki avam Spectroscopy, CBH publisher. 5. Kakani S. L. Hemraj C (1994) Mathematical Physics and Special Theory of Relativity College Book Centre, Jaipur. **Reference Books:** 1. Ghatak, A. K., & Lokanathan, S. (2004). Quantum mechanics: theory and applications. Macmillan. 2. Beiser, A. (1969). Perspectives of modern physics. McGraw-Hill series in fundamentals of physics, Tata McGraw-Hill. 3. White, H. E. (1934). Atomic Spectra. New York-London: McGraw-Hill, 15, 132. **Suggested web-resources:** https://swayam.gov.in/course/4250-quantum-chemistry-spectroscopy-photochemistry https://www.edx.org/course/quantum-mechanics-molecular-structures-utokyox-utokyo003x-1		**No change in the entire course contents, but the title of the course has been changed** Update e-Resources
10.	5.2 Atomic Physics Lab	After completion of this course, the students will be able to- • demonstrate measurements skills in a physics laboratory • analyze the measurement results to draw valid conclusions. • have oral and written scientific communication, and think critically and work independently.	1 Determine the value of Planck constant using Photo cell. 2 Determine the value of Planck constant using solar cell. 3 Study the absorption spectrum of Iodine Molecule. 4 Study the Franck Hertz experiment and determine the ionization potential of inert gas. 5 Study the hyperfine structure of spectral lines and Zeeman effect by constant deviation method 6 Determine the electrical charge (e/m) using Millikan's oil drop method. 7 Determine the specific charge (e/m) using Thomson method. 8 Determine the specific charge (e/m) using helical	1.Determine the value of Planck constant using Photo cell. 2.Determine the value of Planck constant using solar cell. 3.Study the absorption spectrum of Iodine Molecule. 4.Study the Franck Hertz experiment and determine the ionization potential of inert gas. 5.Study the hyperfine structure of spectral lines and Zeeman effect by constant deviation method 6.Determine the electrical charge (e/m) using Millikan's oil drop method. 7.Determine the specific charge (e/m) using Thomson method. 8.Determine the specific charge (e/m) using helical method. **9.To study the hydrogen spectrum and determination of Rydberg's constant.** **10. Verify the inverse square law using photocell.**	Experiment Nos. 9 to 14 have been proposed to strengthen the laboratory practices. Experiment Nos. 9 to 12 in existing course have been removed from the existing experiments list due to unmatched with the theory course in the relevant semester.

			method. ~~9 Determine ballistic constant using constant deflection method.~~ ~~10 Determine ballistic constant using condenser method.~~ ~~11 Determine unknown high resistance by leakage method.~~ ~~12 Determine the magnetic field using ballistic Galvanometer and search coil.~~	**11. Determine the value of Planck constant using LED.** **12. To determine the unknown inductance of the coil (L) using Anderson's bridge.** **13. To determine the unknown capacitance using Desauty's bridge** **14. To obtain lande-g factor by ESR method.** **To determine the workfunction of given metal by suitable method.**	
11.	Advanced Quantum Mechanics	After completion of this course, the students will be able to- • solve the Schrödinger equation for complex systems • describe the structure of the periodic system and the connections between the properties of the elements and their electron configurations • understand the effect of external parameters on the quantum systems		**Unit-1** Postulates of Quantum Mechanics, Planck's Quantum theory, Einstein's explanation, Compton Effect, Wave Particle Duality, de-Broglie waves, Electron Diffraction Experiment, Uncertainty Principle: Formulation and its applications, Bohr's principle of complementarity, Time dependent and time independent forms of Schrodinger's equation: need and justification **Unit-2** Wave Function, its physical significance and properties, Schrodinger and Born interpretation, Probability Current Density, eigenvalues and eigenfunctions, degeneracy, parity and orthogonality of eigenfunctions, expectation values of dynamical variables-position, momentum, energy, Ehrenfest Theorem, Time independent schrodinger equation and stationary state solution, particle in one dimensional box: eigenfunctions and eigenvalues **Unit-3** Discrete energy levels, generalization to three dimensions and degeneracy of levels, Potential step and rectangular potential barrier, Calculation of reflection and transmission coefficients, Alpha Decay, Square Well Potential Problem(attractive), Calculation of	

				transmission and reflection coefficients, Applications of Schrodinger Equation in Spherically symmetric systems: Rigid Rotator and Hydrogen Atom **Unit-4** Operators in quantum mechanics: Definition, Orthogonal Sets, Completeness, Eigen values and Eigenfunction, Operator Formalism, Commutation Algebra, Linear and Hermitian Operators, Commutativity and simultaneous eigenfunctions, Hilbert Space, Operators as matrix, Matrix form of wave equation, Schrodinger, Heisenberg and Interaction matrix representation, Dirac's Bra and Ket vectors, Direct Sum and product of Hilbert space, Co-ordinate and momentum representation **Unit-5** Approximation Methods: perturbation theory, motivation of approximation methods, Variational methods, WKB Approximation, Applications of Variational and WKB methods. Time dependent perturbation theory, Harmonic perturbation. **Recommended Books:** 1. Singh K., Singh S. P. (2005) Elements of Quantum Mechanics, S. Chand. 2. Ghatak, A. & Lokanathan S. (2001) Quantum Mechanics (McMillan India Ltd.) 3. Sakurai J. J. (2005) Modern Quantum Mechanics (Pearson Education) 4. Griffiths D. (2006) Introduction to Quantum Mechanics (Pearson Education) 5. Bjorken J. D. and S. D. Drell (1997) Relativistic Quantum Mechanics (McGraw Hill) 6. Greiner,W and Bromley D. A. (2003) Relativistic Quantum Mechanics (Springer)	

				Reference Books: 1. Ghatak, A. K., & Lokanathan, S. (2004). Quantum mechanics: theory and applications. Macmillan. 2. Beiser, A. (1969). Perspectives of modern physics. McGraw-Hill series in fundamentals of physics, Tata McGraw-Hill. 3. White, H. E. (1934). Atomic Spectra. New York-London: McGraw-Hill, 15, 132. **Suggested web-resources:** https://swayam.gov.in/course/4250-quantum-chemistry-spectroscopy-photochemistry https://www.edx.org/course/quantum-mechanics-molecular-structures-utokyox-utokyo003x-1	
12.	5.2 Advanced Quantum Mechanics Lab	After completion of this course, the students will be able to- • demonstrate measurements skills in a physics laboratory • analyze the measurement results to draw valid conclusions. • have oral and written scientific communication, and think critically and work independently.		1. Determine the specific charge (e/m) using Thomson method. 2. Determine the specific charge (e/m) using helical method. 3. Study the hyperfine structure of spectral lines and Zeeman effect by constant deviation method 4. Determine the electrical charge (e/m) using Millikan's oil drop method. 5. To study the hydrogen spectrum and determination of Rydberg's constant. 6. Verify the inverse square law using photocell. 7. Determine the value of Planck constant using Photo cell. 8. Determine the value of Planck constant using solar cell. 9. Study the absorption spectrum of Iodine Molecule. 10. Study the Franck Hertz experiment and determine the ionization potential of inert gas. 11. Determine the value of Planck constant using LED. 12. To determine the workfunction of given metal by suitable method.	

13.	6.1 Nuclear and Solid State Physics	After completion of this course, the students will be able to- • account for interatomic forces and bonds • have a basic knowledge of crystal systems and spatial symmetries • account for how crystalline materials are studied using diffraction, including concepts like form factor, structure factor, and scattering amplitude. • understand the concepts of nuclear physics • understand the elementary particles and their interactions	**Recommended Books:** 1. Tayal D C (1992) Nuclear physics, Himalya Pub. House, Bombay. 2. Kaplan, I. (1963). Nuclear physics, Oxford & IBH Pub. 3. Pillai S O. (2005), Solid State Physics, New Age International. 4. Singhal R. L. Alvi P. A. (2015) Solid State Physics, Kedarnath Ramnath, Meerut. **Reference Books:** 1. Singru, R. M. (1974). Introduction to experimental nuclear physics, Wiley Eastern Pvt. Ltd. 2. Ghoshal S. N. (2006) Nuclear Physics by S. N., S. Chand. 3. Kittel, C. (1976). Introduction to solid state physics (Vol. 8). New York: Wiley. **4.** Ashcroft, N. W., & Mermin, N. D. (1976). Solid state physics, Cornell University Saunders College Publishing. **Suggested web-resources:** https://swayam.gov.in/course/3817-solid-state-physics https://nptel.ac.in/courses/115105099/ https://ocw.mit.edu/courses/nuclear-engineering/	**No change in the entire course** Update e-Resources

14.	6.2 Nuclear and Solid State Physics Lab	After completion of this course, the students will be able to- • demonstrate measurements skills in a physics laboratory • analyze the measurement results to draw valid conclusions. • have oral and written scientific communication, and think critically and work independently. • to understand the laws of nuclear and solid state physics		**No change in the entire course**

15.	Advanced Semiconductor Devices	course, the students will be able to- • understand the mechanism of semiconductor devices • understand the applications of semiconductor devices in routine life • make advancement in these devices		**Unit-1** Energy Bands, direct and indirect semiconductors, effective mass, Intrinsic and Extrinsic semiconductors, Occupation Probability and carrier concentration, Temperature Dependence of carrier concentration, Fermi Level, Quasi Fermi Level, mobility and conductivity, Hall effect, four probe method of resistivity measurement **Unit-2** Generation and Recombination of Charges, Diffusion, Continuity Equation, Injected Minority charge carriers, potential variation within a graded semiconductor, Schottky Junction and Ohmic Contact, pn junction diode, Zener diode, Zener and avalanche breakdown, Tunnel diode, Semiconductor Photodiode and Light Emitting Diode **Unit-3** Avalanche Photodiode: Structure, Materials, Characteristics and device performance Bipolar Junction Transistor: Types, Current components, CB,CC,CE configuration, Ebers-Moll model of transistors. Concept of Load Line and Operating Point, Thermal stability of transistor, Fixed Bias, Emitter Bias, Voltage Divider Bias, Collector Feedback Configuration **Unit-4** Junction Field Effect transistor, depletion and enhancement type MOSFET, V-I characteristic, operation methods, FET biasing: Fixed, self and Voltage Divider Bias Four Layer Diode (p-n-p-n), SCR, Principle of operation, transistor analogy, methods of turning on and turning off (only reference), Gate characteristic, DIAC, TRIAC, light activated thyristor Unit-5 Operational Amplifier and its applications, inverting and non-inverting amplifiers, adder, integrator, differentiator,	

				wave-form generator, comparator, Schmitt trigger. **Recommended Books:** 1. Millaman J. and Halkias C. (1972) Integrated Electronics (McGraw Hill, New York), 2. Malvino L. (1999) Electronic Devices and circuits 3. Sterectman B. G. (1995) Solid State Electronic Devices and Integrated Circuits (Prentice Hall Inc.). 4. Sze S.M. (1999) Physics of Semiconductors Devices by (John Wiley & Sons). **Suggested e-resources:** **1.** https://nptel.ac.in/courses/115102014/ **2.** https://nptel.ac.in/courses/113106062/ **3.** https://nptel.ac.in/courses/117106091/	

16.	Advanced Semiconductor Devices LAB	After completion of this course, the students will be able to- • assess the validity of physical theories through the design and execution of an experiment, the analysis of uncertainties associated with the measurement of data and the interpretation of the data to draw valid scientific conclusions (lab skills). • connect a digital oscilloscope to a computer and record a signal with an appropriate sampling rate; • generate and interpret the power spectrum of the recorded data, use the tools, methodologies, language and conventions of physics to test and communicate ideas and explanations		1 To study the V-I characteristics of FET using discrete components on bread board. 2 To study the V-I characteristics of UJT. 3 To study the output and transfer characteristics of FET. 4 To study the input and output characteristics of BJT. 5 To study the V-I characteristics of DIAC. 6 To study the V-I characteristics of TRIAC. 7 To study the V-I characteristics of SCR. 8 To study the characteristics of optocoupler and draw its frequency response. 9 To study the V-I characteristics of Photodiode. 10 To study the V-I characteristics of p-n junction diode using discrete components on bread board. 11 To study the V-I characteristics of pnp or npn transistor using discrete components on bread board.	

ANNEXURE-VII A

Name of Programme: M. Sc. (Physics)

Programme Educational Objectives

Among various science subjects, Physics is a natural science which deals with the behavior of matter, energy and the natural laws. The core theories of Physics are: Classical Mechanics, Electromagnetism, Thermodynamics and Statistical Mechanics, Quantum Mechanics and Relativity. There are many more branches of Physics like including astronomy, biophysics, atmospheric physics, nuclear physics etc. Therefore, Physics plays a key role in the future progress of humankind either in education or research in the world because of its characteristics features.

Keeping in views the entire scientific development of the student through covering almost all the courses, the M.Sc. (Physics) programme has been designed. The present programme aims to train the students to acquire high level theoretical and experimental knowledge in Physics through learning the designed studies with high quality and significance. However, the main objectives of the programmes are as follows:

- To provide the fundamental concepts of nature in terms of physics with their utilizations
- To produce MSc students who are very knowledgeable and theoretically sound and are able to apply these for the analysis and solution of problems where these leads to new or substantially improved insights and performances.
- To provide the knowledge of various new techniques by which the students can lead the cutting edge technologies
- To encourage research and development activities
- To prepare the competent physicists at national and international level
- To produce MSc students with high integrity having social values and who are ethically professional
- To produce MSc students who can think critically and creatively thus capable of generating and developing new knowledge, products, materials or methods for the benefits of mankind.
- To produce MSc students with excellent communication skills, capable of communicating effectively in various context, thus sharing new knowledge with other researchers from other institutions, universities and also industrialists
- To develop gender –neutral attitudes and practices; respect for all races, nations, religions, culture, languages and traditions
- To produce MSc students who can adapt to changes in environment and practice lifelong learning
- To provide the ideas about pollution control and environment sustainability through exemplary education

Programme Outcomes

PO1: Physics Knowledge: Possess fundamental knowledge of various core courses of physics to solve complex scientific problems of the society. Also, the students will be able to apply theoretical knowledge of principles and concepts of Physics to practical problems

PO2: Planning Abilities-Ability to demonstrate efficient planning including time management, resource management and organization skills.

PO3: Expert of Advanced Tool: Expertise in new and advanced techniques like photo-sepectrometer, XRD, FESEM, Raman, DSC etc. through project component of the programme.

PO4: Problem analysis ability-Ability to apply physics principles alongwith other scientific conceptual attitude to analyze the problems related to society and to show the caliber for finding the solution.

PO5: Leadership Skills- ability to have leadership skills with high regard for ethical values and social responsivities through learning of time management and team work skill.

PO6: Professional Identity- Possess ability to prove professional identity in any institution and industry at national and international level

PO9 7: Physics and society-Ability to explain the understanding of impact of physics study on the society including pollution, environment, health and ecosystem. In addition, the students will be able to propagate their knowledge to address problems of social relevance such as energy, and environment through their specific electives.

PO8: Communication-Possess effective communication skills, teamwork skills, multidisciplinary approach, and an ability to relate the role of physics to address environmental issues.

PO9: environment and sustainability- Understanding about environment sustainability and pollution control through project and laboratory practices

PO10: Life-long learning- Possess the knowledge of current issues and ability to engage in life-long learning

Name of Programme: M. Tech. (Nanotechnology)

Programme Educational Objectives

Banasthali Vidyapith has made a significant contribution in the technology education by introducing the M.Tech. (Nanotechnology) programme. Nanotechnology is not being considered simply a technology like other technologies which are confined almost in a limited area. In fact, the nanotechnology leads to a mission through which the whole country can be promoted in terms of sciences and technology. Keeping in view such a mission, The M. Tech. (Nanotechnology) programme has been designed by the department of Physics. Actually, M. Tech. (Nanotechnology) is an umbrella programme for capacity building which envisages the overall development of this field of research in the country and to tap some of its applied potential for nation's development.

Keeping in views the entire scientific and technological development of the student through covering almost all the courses, the M. Tech. (Nanotechnology) programme has been designed. The present programme aims to train the students to acquire high level theoretical and experimental knowledge in the direction of technology through learning the designed courses with high quality and significance. However, the main objectives of the programmes are as follows:

- To prepare the students to outshine in academics and research in different motifs of Nanoscience and Nanotechnology.
- To train the students with good theoretical and practical knowledge so as to comprehend, analyze, design, and create novel products and solutions for the real life problems.
- To provide the knowledge of various new techniques by which the students can lead the cutting edge technologies
- To encourage research and development activities
- To prepare the competent technologists at national and international level
- To provide students with an academic environment aware of excellence, leadership, written ethical codes and guidelines, and the life-long learning needed for a successful professional career
- To produce the students who can think critically and creatively thus capable of generating and developing new knowledge, products, materials or methods for the benefits of mankind.
- To prepare the students with excellent communication skills, capable of communicating effectively in various context, thus sharing new knowledge with other researchers from other institutions, universities and also industrialists
- To develop gender –neutral attitudes and practices; respect for all races, nations, religions, culture, languages and traditions
- To coach students in professional and ethical attitude, effective communication skills, teamwork skills, multidisciplinary approach, and an ability to relate nanotechnology to address environmental issues.
- To provide the ideas about environment sustainability and pollution control through exemplary and practical educations

Programme Outcomes

PO1: Knowledge about Technology: Able to apply knowledge and skills to solve complex technical problems which calls for insight into the latest technologies and best engineering practices including behavioral, social, and manufacturing practices.

PO2: Planning Abilities-Ability to demonstrate efficient planning including time management, resource management and organization skills

PO3: Problem analysis ability-Ability to apply scientific attitude to analyze the society problems and to apply information systematically for the solution

PO4: Modern Tool usage: Ability to handle new techniques and advanced tools like XRD, FESEM etc, which derive the nanosciences and nanotechnology

PO5: Leadership Skills- ability to have leadership skills with high regard for ethical values and social responsivities through the management related courses.

PO6: Professional Identity- able to show professional identity as competent technologists at national and international level

PO9 7: Technology and society-Ability to show the understanding of impact of nanomaterials on the society including environment, health and ecosystem. On the other side, the Graduates will be able to propagate their knowledge to address problems of social relevance such as energy, environment and medicine through their specific electives.

PO8: Communication-Possess effective communication skills, teamwork skills, multidisciplinary approach, and an ability to relate nanotechnology to address environmental issues.

PO9: environment and sustainability- Understanding about environment sustainability and pollution control through laboratory practices

PO10: Life-long learning- Possess the knowledge of contemporary issues and ability to engage in life-long learning

Name of Programme: M.Tech. (Nanotechnology)

Course Details:

S. N.	Course List	Learning Outcome	Existing Syllabus	Suggested Syllabus	Remarks
1.	ELE 506 Nano-Photonics & Optoelectronics	After completion of this course, the student will be able to- • understand the fundamental operating principles of photodevices • analyse LED and heterojunction laser materials selection and design • understand fundamentals of organic electronics and liquid crystal displays • get an overview of photonic systems	SECTION-A III-V semiconductor quantum wells, Quantum Dots, Nonlinear Optical Properties, Quantum Confined Stark effect, Dielectric confinement effect, Superlattices, Core shell Quantum Dots,Quantum Dot Quantum wells, Quantum confined structures as lasing media ~~Photonic Crystals, 1D,2D,3D photonic structures, Features of photonic crystals, Microcavity effect Methods of Fabrication, Photonic crystal optical circuitry Nonlinear Photonic crystals, Photonic Crystal Fibre, Photonic Crystal Sensor~~ SECTION-B Introduction to Lasers, Guided Waves,Gain in two level lasing medium, Lasing Condition and Gain in semiconductors, Selective Amplification and Coherence, Threshold condition for lasing, Lineshape function and line broadening mechanisms, Lasing threshold in two level system, LED: Basics, Choice of Materials, Light Output from LED, Semiconductor Lasers: Basic principles, Heterojunction Lasers: Energy Band diagram and Power output, Quantum Well and Quantum Dot lasers, Surface emitting lasers, Unipolar Devices, Quantum Cascade laser:	SECTION-A III-V semiconductors: Absorption in Semiconductors: Indirect Intrinsic transitions, Exciton absorption, Donor acceptor and Impurity Band Absorption; Effect of electric field on absorption: Franz Keldysh and Stark effect: Quantum confinement; Quantum Dots; Quantum wells; Absorption in Quantum Wells and Quantum Confined Stark effect; Radiation in Semiconductors: Relation between absorption and emission spectra, Near Bandgap radiative transitions, Deep-level transitions, Auger recombination; Dielectric confinement effect; Superlattices; Core shell Quantum Dots; Quantum confined structures as lasing media SECTION-B Introduction to Lasers; Gain in two level lasing medium; Lasing Condition and Gain in semiconductors; Selective Amplification and Coherence; Threshold condition for lasing; Lineshape function:Line broadening mechanisms: Natural Broadening, Collision Broadening, Doppler Broadening; Semiconductor Lasers: Basic principles; Heterojunction Lasers: Energy Band diagram and Power output; Quantum Well and Quantum Dot lasers; Multiple Quantum Well laser; Quantum Cascade laser:	Defining the topics to be studied in a clear form. Updating the course: Photonic Crystals moved to Section-C Defining the topics to be studied in a clear form Updating the course: portion on LED is deleted as not relevant.

			Structure and Principle of Operation SECTION-C ~~Photodiodes, Avalanche Photodiodes, Structure, Materials, Characteristics, Device performance, Infrared Quantum detectors, QWIPs, Operation Principles, design and material choices, Quantum dot Infrared Photodetectors, Extending QWIPs into shorter and longer wavelengths~~	Structure and Principle of Operation SECTION-C Photonic Crystals: 1D,2D,3D Photonic crystals, Photonic Bandgap and defects in photonic crystals, Features of photonic crystals, Optical microcavites, Methods of Fabrication, Nonlinear Photonic crystals, Photonic Crystal Fibre, Photonic Crystal Sensor; Surface Plasmons: Drude–Sommerfeld theory,Surface plasmon polaritons at plane interfaces, Properties of surface plasmon polaritons, Surface plasmon sensors, Surface plasmons in nano-optics, Plasmons supported by wires and particles **Recommended Books** 1. Bhattacharya P. (2002) Semiconductor Optoelectronic Devices (Prentice Hall India, IInd edition) 2. Prasad P. N. (2004) Nanophotonics (Wiley Interscience, USA). 3. Silvfast W.T. (1998) Laser Fundamentals by, (Cambridge University Press, UK) 4. Ghatak A, Thyagarajan, K (2010) Lasers, Fundamentals and applications (Springer Science+Business Media, USA) 5. Novotny L., Hecht B. (2006) Principles of Nano-Optics (Cambridge University Press, UK) **Suggested e-Resources:** NPTEL : Semiconductor optoelectronics https://nptel.ac.in/courses/115102103/ NPTEL : Nanophotonics https://nptel.ac.in/courses/118106021/1	1. Photonic Crystals moved from Section A to Section C. 2. Added topic on surface plasmons. 3. Deleted section on photodetectors as not relevant. Update e-Resources

2.	PHY 502 Advanced Synthesis Processes and Devices	After completion of this course, the students will be able to- • have a firm foundation in the fundamentals and application of current chemical and scientific theories including those in Analytical, Inorganic, Organic and Physical synthesis processes. • have skills in problem solving, critical thinking and analytical reasoning as applied to scientific problems. • communicate the results of scientific work in oral, written and electronic formats to both scientists and the public at large. • explore new areas of research in both chemistry and allied fields of science and technology.	**Recommended Books** 1. Chapman and Hall.. **Suggested –e resources** https://nptel.ac.in/courses/112101004/downloads/(36-8-1)%20NPTEL%20-%20Vacuum%20Technology.pdf https://ocw.mit.edu/search/ocwsearch.htm?q=stm	**No change in entire course** Update e-resources

		surfaces, and surface forces.			
6.	NANO 502L Simulation Lab-I	After completion of this course, the students will be able to- • learn programming language, • use various dynamic and static libraries and few package on simulations related to nano-materials • understand various mechanism at nano-scale through simulations	~~To perform various experiments Atomistix Toolkit - Virtual NanoLab (ATK-VNL) simulation package is used. ATK-VNL produces very fast and reliable simulation results for various 1,2 and 3 dimensional nano-structures and nano-devices which will rather requires a very large and expansive laboratory at the experimental level. ATK-VNL helps students to understand the electronic, optical, thermal, mechanical and other properties of various nano-structures and materials at the atomic level.~~ **Simulation Lab-I** 1. ~~To calculate ionisation energy and electron affinity of benzene molecule in isolated (gas phase) and in SET environment.~~ 2. ~~To calculate binding energy of armchair graphene nano-ribbons.~~ 3. ~~To Calculate the band structure of pristine and Cu edge terminated armchair graphene nano-ribbons~~ 4. ~~To analyse Band structure of Cu edge doped armchair graphene nano-ribbons.~~ 5. ~~To calculate binding energy of zigzag graphene nano-ribbons.~~ 6. ~~To draw band structure of pristine and Cu terminated zigzag graphene nano-ribbons.~~ 7. ~~To draw band structure of pristine and Cu edge doped zigzag graphene nano-ribbons.~~ 8. ~~To calculate and analyse Density of states of a molecule based nano device.~~ 9. ~~To study molecular projected self-consistent Hamiltonian of a molecule based nano-device.~~ ~~To study HOMO, LUMO energy levels for a single molecule junction.~~	Introduction to Programming, problem analysis and algorithms. One programming language (C++, Python, Fortran, Java), Programming Software: Mathematica, MATLAB,Visualisation packages. 1. Use of standard library functions. 2. Problems based on do, while, for loops. 3. Problems based on array, data type, data analysis. 4. Sorting of numbers and one dimensional array searching. 5. Problems based on pointer, parameter passing in function. Recursion 6. Problems based on object oriented programming. Classes, Modules, Subroutines. 7. Reading writing from/in files. 8. Use of dynamic and static libraries. Command line arguments and shell scripting. Introduction to some Open source simulation tools that are used to model nanostructure at the levels of classical and quantum mechanics.	Knowledge of Software programming tools and programming language is necessary of any scientific training today. To reduce the dependency on proprietary software and enhance conceptual understanding of computational tools we need to learn various tools. A single software can not fulfil are the requirements.
7.	PHY 512L	After completion of this			

	Nano Fabrication and Characterization Lab-I	course, the students will be able to- • synthesize the nano-materials • characterize the synthesized materials using several advanced characterizing tools • seek potential of the materials for several industrial technological applications.		**No change in entire course**
8.	ELE 501 Advanced Nano-electronics	After completion of this course, the students will be able to- • cope up with certain nanoelectronic systems and building blocks such as: low-dimensional semiconductors, heterostructures, carbon nanotubes, quantum dots, nanowires etc. • set up and solve the Schrödinger equation for diferent types of potentials in one dimension as well as in 2 or 3 dimensions for specific cases. • use matrix methods for solving transport problems such as	**Recommended Books** 1.
